

Description

The LM358 consists of two independent voltage comparators. It can be a single power source or a double power source and the power consumption current of the power supply is independent of the power voltage. Applications include audio amplifiers, industrial controls, DC gain components, and all conventional operational amplifiers. Adopt the encapsulation form of SOP8/DIP8

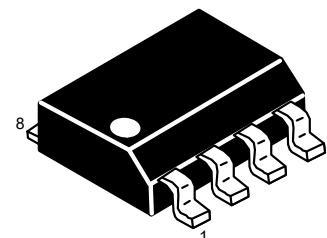

DIP8

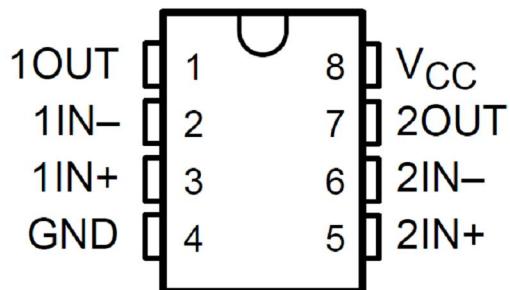

Features

- Work with single or double power supply
- Contains two operational amplifiers
- Logic circuit matching
- Low consumption
