For Suggested Straight Mount PCB Holes Sizes of Compliant Press-Fit Connectors, for more informations. Please consult factory for SK6370.

### Press-Fit User Information

Connectors-to-PCB installation instructions:

1. Choose the proper tooling. Insertion tooling and single contact repair tooling are available from Positronic.
2. Insert the connector into the PCB or backplane and seat connector fully with seating/ support tool.
3. Secure the connector to the PCB or backplane using two self-tapping screws for plastic.

### Need to repair a single contact because of damage in manufacturing, testing, or field use?

1. Choose the proper contact extraction tool.
2. Push the contact out with a firm, steady force. Remember, excessive force is not required.
3. Install a new contact with the proper contact insertion tool. You are done.

**Note:** Please consult factory for Connector Installation Tool Ordering Part number.

MODULAR HOOD

APPLICABLE FOR CONNECTOR WITH N5 SPACER ONLY

**MATERIALS AND FINISHES**

<b>Hood</b>	Glass-filled polyester, UL 94V-0. Blue color.
<b>Hood Screws</b>	Steel, zinc plate with chromate seal.
<b>Cable clamp</b>	Steel with nickel plate.
<b>Cable Clamp Screws</b>	Brass, zinc plate with chromate seal. (Consult sales for Hood availability).

**SCORPION HOODS ARE MOLDED WITH THE FOLLOWING MODULES:**

**Note:** N5 Spacer (for Hood application, place N5 spacer next to End module).

**HOOD WITH JACKSCREW  
CODE WE (STEP 7)**

**HOOD WITHOUT JACKSCREW  
CODE W (STEP 7)**

## HOOD WITH CABLE CLAMP

Minimise wire skewing inside the hood

APPLICABLE FOR CONNECTOR WITH N5 SPACER ONLY

## APPLICATION WITHOUT HOOD

Removable contacts should be allowed to float after installation in the connector body. This enables superior mating performance. Therefore, wires must remain approximately perpendicular to the connector for a recommended minimum distance. See diagram.

## APPLICATION RECOMMENDATION:

Positronic recommends do not bend wires on a crimp version at a sharp angle

CONTACTS

**Material and Finishes:**

Precision machined copper alloy with gold flash over nickel.

Consult sales for other contact sizes, materials, finishes, termination styles and more details.

**Note:**

Please use correct wire size and it should be smaller than ØA of the contact. Some connectors may not accommodate some thicker insulation wires. Customer review for wire selection is recommended. Removable contacts should be allowed to float after installation in connector body. This enables superior mating performance. If floating is not enabled, some mating issues may occur; especially when wires/cables are bent at a severe angle.

## RECOMMENDED CRIMPING PROCEDURE FOR SIZE 4 CONTACTS.

- 1 Strip cable and insert in contact crimp barrel. Ensure that all of the conductor wire strands are captured within crimp barrel and that the cable conductor wire is visible through inspection hole.
- 2 Lift the movable handle to open the die head, place the contact with cable inside hexagonal die, ensure that the end face of contact is touching the stopper.
- 3 Now press down movable handle to crimp the contact. After crimping is done, pull both bar away from each other to open the die.

- 4 To remove pinched material of crimped contact, rotate the contact in 90 degrees and repeat step 2 and 3. Otherwise file off pinched material.

Final crimped contact shall look like this.
