INPUT/OUTPUT CONFIGURATION

INA, INB
OUTA, OUTB
Note:

INA=INB=H, OUTA and OUTB are low level in brake state, here the power NMOS NA and NB are on, the enable NMOS ENA and ENB are off. The NA and NB have the ability of sink current.

INA=INB=L, OUTA and OUTB are low level in off state, here the power NMOS NA and NB are off, the enable NMOS ENA and ENB are on. The ENA and ENB only pull down the OUTA and OUTB, and they haven't the ability of sink current.

PROTECTION FUNCTION

THERMAL SHUTDOWN (TSD) CIRCUIT

The PT5126A includes a thermal shutdown circuit, which turns the output transistors off when the junction temperature (Tj) exceeds 175°C (typ.).

The output transistors are automatically turned on when Tj cools past the shutdown threshold, which is lowered by a hysteresis of 30°C.

TSD = 175°C
ΔTSD = 30°C

* In thermal shutdown mode, the circuits powered by VCC are work normal, and the circuits powered by VM are shut down.

UNDER VOLTAGE LOCKOUT (UVLO) CIRCUIT

The PT5126A includes an under voltage lockout circuit, which puts the output transistors in the high-impedance state when VCC decreases to 2.13V (typ.) or lower.
The output transistors are automatically turned on when VCC increases past the lockout threshold, which is raised to 2.21 V by a hysteresis of 0.08 V.

* In UVLO shutdown mode, a part of circuits powered by VCC are work normal, and the circuits powered by VM are shut down.

SHOOT-THROUGH CURRENT PROTECTION

During Dead Time (Shoot through current circuit is operated.), Power MOS both of HI side and Low side are turned off. But in this time, internal parasitic diode is turned on according to current direction.

3. Maximum power dissipation is a function of TJ(max), Rja, and TA. The maximum allowable power dissipation at any allowable ambient temperature is PD = (TJ(max) − TA)/ Rja. Operating at the absolute maximum TJ of 150° C can affect reliability.

4. The package thermal impedance for HSOP8 is calculated in accordance with JEDEC, 2S2P test PCB, Rja=41℃/W

5. The package thermal impedance for SOP8 is calculated in accordance with JEDEC, 2S2P test PCB, Rja=113.5℃/W
