ProLight PBVF-31FWU-F9G
31W Power LED
Technical Datasheet
Version: 1.0

Prolight Opto ® ProEngine Series

Features

- High flux density of lighting source
- Good color uniformity
- RoHS compliant
- More energy efficient than incandescent and most halogen lamps
- Long lifetime
- AEC-Q101 Qualified
- SAE/ECE compliant

Main Applications

- Bicycle Lamps
- Exterior Automotive Lighting
- Floodlight

Automotive

Introduction

· The input power is 31 Watt, the multi-chip ultra high power ProEngine Series delivers never before seen luminous flux output from a single emitter. The superficial illuminating nature of ProEngine makes them the preference bicycle lamps, typical applications include exterior automotive lighting and floodlight.

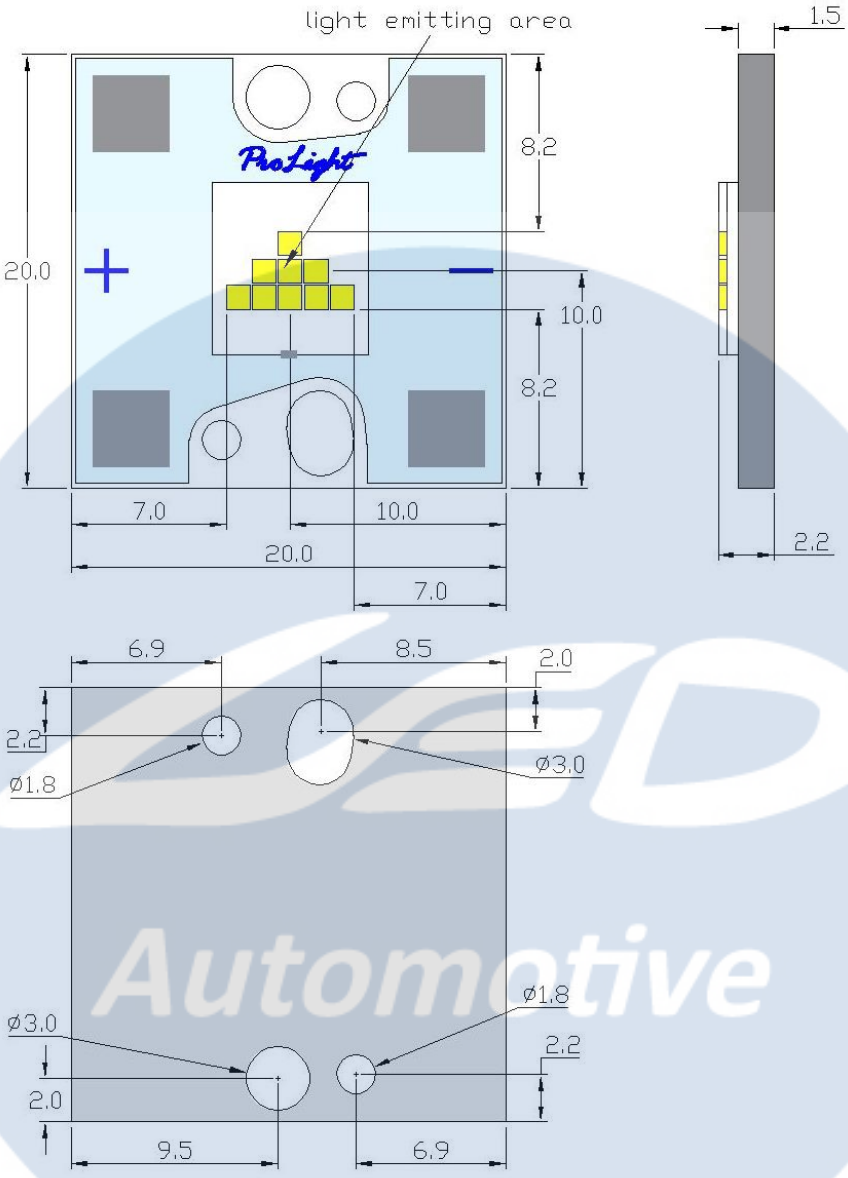
Mechanical Dimensions



Notes:

1. Solder pads are labeled “+” and “-” to denote positive and negative, respectively.
2. Drawing not to scale.
3. All dimensions are in millimeters.
4. Unless otherwise indicated, tolerances are ± 0.30mm.
5. **Please do not use a force of over 0.3kgf impact or pressure on the lens of the LED, otherwise it will cause a catastrophic failure.**

*The appearance and specifications of the product may be modified for improvement without notice.

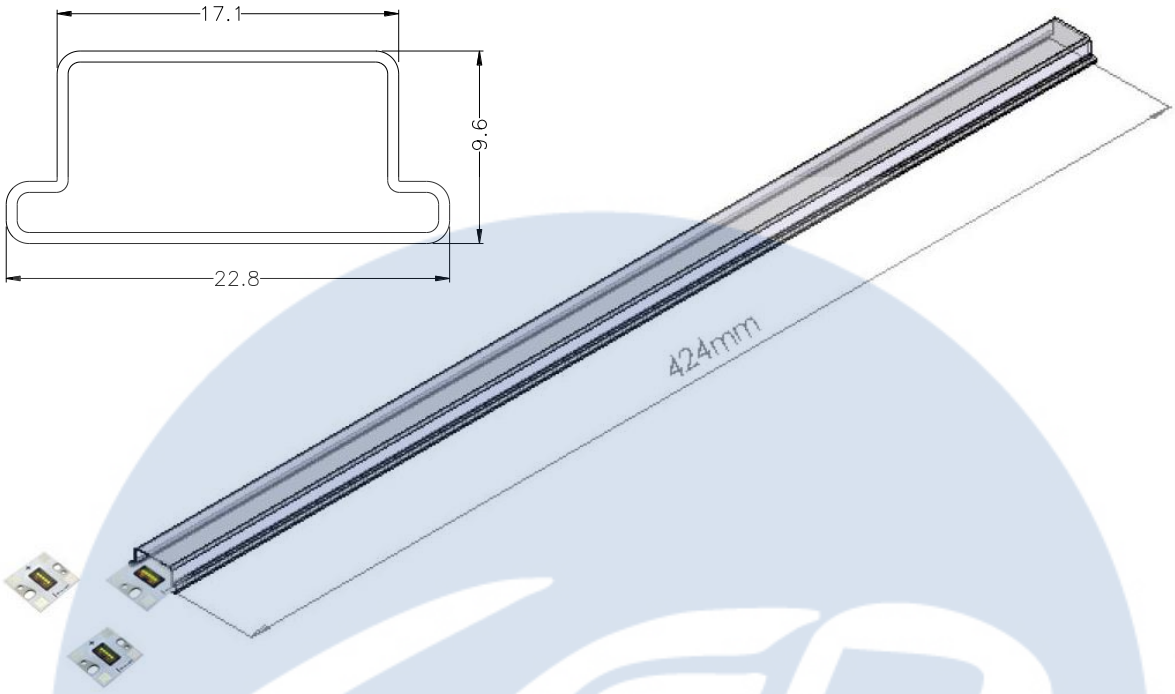
Packing Specifications



Notes:
1. 20 pieces per tube.
2. Drawing not to scale.
3. All dimensions are millimeters.
4. All dimensions without tolerances are for reference only.

** Please do not open the moisture barrier bag (MBB) more than one week. This may cause the leads of LED discoloration. We recommend storing ProLight's LEDs in a dry box after opening the MBB. The recommended storage conditions are temperature 5 to 30'C and humidity less than 40% RH.

Recommended Soldering Condition

- Please use lead free and “no clean ” solders.
- Soldering shall be implemented using a soldering tip at a temperature lower than 350 ℃, and shall be finished within 3.5 seconds for each pad.
- During the soldering process, put the LEDs on materials whose conductivity is poor enough not to radiate heat of soldering.
- Properly solder tin wires before soldering them to LEDs.
- Avoid touching the glass lens with the soldering iron.
- Please prevent flux from touching to the glass lens.
- Please solder evenly on each pad.
- Contacts number of a soldering tip should be within twice for each pad.
- Next process of soldering should be carried out after the LEDs have return to ambient temperature.

*ProLight cannot guarantee if usage exceeds these recommended conditions.
Please use it after sufficient verification is carried out on your own risk if absolutely necessary.

Precaution for Use

- The modules light output are intense enough to cause injury to human eyes if viewed directly. Precautions must be taken to avoid looking directly at the modules with unprotected eyes.
- The modules are sensitive to electrostatic discharge. Appropriate ESD protection measures must be taken when working with the modules. Non-compliance with ESD protection measures may lead to damage or destruction of the product.
- Chemical solvents or cleaning agents must not be used to clean the modules. Mechanical stress on the Emitters must be avoided. It is best to use a soft brush, damp cloth or low-pressure compressed air.
- The products should be stored away from direct light in dry location.
- The appearance, specifications and flux bin of the product may be modified for improvement without notice. Please refer to the below website for the latest datasheets. http://www.prolightopto.com/

Handling of without Cover Lens LEDs

Notes for handling of without cover lens LEDs

- Please do not use a force of over 0.3kgf impact or pressure on the emitting area, otherwise it will cause a catastrophic failure.
- Avoid touching the emitting area especially by sharp tools such as Tweezers.
- Avoid leaving fingerprints on the emitting area .
- Please store the LEDs away from dusty areas or seal the product against dust.
- Please do not mold over the emitting area with another resin. (epoxy, urethane, etc)
