Circuit connectivity is as follows:

- Line 1 connected to Pin 9.
- Line 2 connected to Pin 10.
- Line 3 connected to Pin 11.
- Line 4 connected to Pin 12.
- Line 5 connected to Pin 13.
- Line 6 connected to Pin 14.
- Line 7 connected to Pin 15.
- Line 8 connected to Pin 16.
- Pins 1 - 8 connected to ground.

## CIRCUIT BOARD RECOMMENDATIONS

Circuit board layout is critical for electromagnetic compatibility protection. The following guidelines are recommended:

- The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- The path length between the TVS device and the protected line should be minimized.
- All conductive loops including power and ground loops should be minimized.
- The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
