## L-handle screwdrivers

If high torques are required for tightening or loosening screws, the L-handle screwdriver is the solution. The ergonomic and asymmetrical grip simplifies handling under continuous operation. Its two-component design with soft zones reduces pressure marks while at the same time allowing for optimum torque transfer. Easy-to-read sizes on shaft (laser marking) and handle.

- ❶ Graded grip sizes correspond with the necessary torque of the respective blade size.
- ❷ With transverse hole for hanging up.
- ❸ Oil and acid-resistant non-stick special rubber handle.
- ❹ Easy to read sizes through laser marking process on matte-chrome plated shafts of chrome silicon manganese molybdenum alloy special steel. Continuously hardened and stress-relieved with a balanced ratio of torsional rigidity and toughness.
- ❺ Processed black tip for greatest precision for accepting screws. Also prevents tool from slipping.

Difficult to access  
Allen screws can be screwed  
at a working angle of  
up to 25° with HX Ball.

When using the screw  
socket of the short blade,  
the longer shank is used  
as "lever" for extreme torque.
