## Product Specification

## PE42430

## Product Description

The PE42430 is a HaRP ${ }^{\text {TM }}$-enhanced reflective SP3T RF switch developed on the UltraCMOS ${ }^{\circledR}$ process technology. This tiny general purpose switch is ideal for WLAN and bluetooth applications in the 2.4-2.5 GHz bands as well as general broadband switching applications. It is comprised of three RF ports and has low insertion loss and high isolation. An on-chip CMOS decode logic facilitates a three-pin CMOS control interface. Unlike competitive solutions, there is no need for blocking capacitors when using the PE42430.

Peregrine's HaRP ${ }^{\text {TM }}$ technology enhancements deliver high linearity and exceptional harmonics performance. It is an innovative feature of the UltraCMOS ${ }^{\oplus}$ process, providing performance superior to GaAs with the economy and integration of conventional CMOS.

## Features

- HaRP $^{\text {TM }}$-enhanced UltraCMOS ${ }^{\oplus}$ device
- Low insertion loss
- Typical 0.45 dB @ 1 GHz
- Typical 0.55 dB @ 2.5 GHz
- IIP3: Typical +66 dBm
- P0.1dB Compression: Typical +30 dBm
- Excellent ESD tolerance of 4500 V HBM and 250 V MM on all ports
- No external $\mathrm{V}_{\mathrm{DD}}$ required. $\mathrm{V}_{\mathrm{DD}}$ is derived from switch control inputs
- Package type: 8-lead $1.5 \times 1.5 \mathrm{~mm}$ DFN

Notes: 1. HBM ESD Voltage (MIL_STD 883 Method 3015.7)
2. MM ESD Voltage (MM, JEDEC JESD22-A115-A )

Exceeding absolute maximum ratings may cause permanent damage. Operation should be restricted to the limits in the Operating Ranges table.

## Electrostatic Discharge (ESD) Precautions

When handling this UltraCMOS ${ }^{\circledR}$ device, observe the same precautions that you would use with other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the specified rating.

## Moisture Sensitivity Level

The Moisture Sensitivity Level rating for the PE42430 in the 8-lead $1.5 \times 1.5 \mathrm{~mm}$ DFN package is MSL1.

## Latch-Up Avoidance

Unlike conventional CMOS devices, UltraCMOS ${ }^{\circledR}$ devices are immune to latch-up.

## Evaluation Kit Information

The SP3T Switch Evaluation Kit facilitates customer evaluation of the PE42430 SP3T switch. The RF common port is connected through a $50 \Omega$ transmission line to J2. Ports 1, 2 and 3 are connected through $50 \Omega$ transmission lines to J 3 , J5 and J 4 respectively. J 1 provides digital inputs V 1 , V2 and V3 to the device.

On the back of the board, a through line connects SMA connectors J6 and J7. This transmission line can be used to estimate the PCB loss over the environmental conditions.

This four layer board is composed of Rogers 4350 on the top and bottom and FR4 on the inner layers with a total thickness of 0.062 ". All transmission lines have 21.5 mil width and 7.25 mil gap.

Use jumpers on header J1 to short the control pins to ground for logic low. $V_{D D}$ is supplied to the part through at least one of the control pins via Pins 1, 3 or 5 (V3, V2, V1) on header J1.
