## UltraCMOS® SPDT RF Switch, $100 \mathrm{MHz}-8.5$ GHz

## Features

- $802.11 \mathrm{a} / \mathrm{b} / \mathrm{g} / \mathrm{n} / \mathrm{ac} / \mathrm{ax}$, Wi-Fi 6E and ultra-wideband (UWB) support
- Exceptional isolation
- 48 dB @ 2.4 GHz
- 35 dB @ 5.8 GHz
- Fast switching
- 145 ns switching time
- 125 kHz switching rate
- High power handling
- 39 dBm pulsed
- 30 dBm CW
- High linearity across supply range
- IIP3 of 61 dBm

Figure 1 - PE42424 Functional Diagram

- 1.8 V control logic compatible
- $105^{\circ} \mathrm{C}$ operating temperature
- ESD performance
- 2500V HBM on RF pins to GND
- Packaging - 6-lead $1.5 \times 1.5 \mathrm{~mm}$ DFN

## Product Description

The PE42424 is a HaRP ${ }^{\text {TM }}$ technology-enhanced reflective $50 \Omega$ SPDT RF switch designed for use in high power and high performance WLAN $802.11 \mathrm{a} / \mathrm{b} / \mathrm{g} / \mathrm{n} / \mathrm{ac} / \mathrm{ax}$ and Wi-Fi 6E applications such as carrier and enterprise WiFi products and UWB applications supporting bandwidths up to 8.5 GHz .
This switch features exceptional port-to-port isolation, fast switching speed, and high power handling, all in a compact $1.5 \times 1.5 \mathrm{~mm}$ package. PE42424 also features high linearity that remains invariant over the full power supply range. In addition, this device has robust ESD and temperature performance and does not require blocking capacitors or any external matching components.
The PE42424 is manufactured on pSemi's UltraCMOS® process, a patented variation of silicon-on-insulator (SOI) technology on a sapphire substrate.
pSemi's HaRP technology enhancements deliver high linearity and excellent harmonics performance. It is an innovative feature of the UltraCMOS process, offering the performance of GaAs with the economy and integration of conventional CMOS.

## Absolute Maximum Ratings

Exceeding absolute maximum ratings listed in Table 1 may cause permanent damage. Operation should be restricted to the limits in Table 2. Operation between operating range maximum and absolute maximum for extended periods may reduce reliability.

## ESD Precautions

When handling this UltraCMOS device, observe the same precautions as with any other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in Table 1.

## Latch-up Immunity

Unlike conventional CMOS devices, UltraCMOS devices are immune to latch-up.
Table 1 - Absolute Maximum Ratings for PE42424

| Parameter/Condition | Symbol | Min | Max | Unit |
| :--- | :---: | :---: | :---: | :---: |
| Supply voltage | $\mathrm{V}_{\mathrm{DD}}$ | -0.3 | 5.5 | V |

| 3rd Order Input Intercept Point ${ }^{(2)}$ | IIP3 | RFC-RFX | 1900 MHz |  | 60 |  | dBm |
| 3rd harmonic | 3 fo | RFC-RFX | $\mathrm{P}_{\mathrm{IN}}=+30 \mathrm{dBm} @ 1900 \mathrm{MHz}$ |  | 74 |  | dBc |
| 2nd Order Input Intercept Point ${ }^{(2)}$ | IIP2 | RFC-RFX | 1900 MHz |  | 125 |  | dBm |
| 2nd harmonic | 2 fo | RFC-RFX | $\mathrm{P}_{\mathrm{IN}}=+30 \mathrm{dBm} @ 1900 \mathrm{MHz}$ |  | 85 |  | dBc |
| Switching time | $\mathrm{T}_{\text {SW }}$ |  | $50 \%$ CTRL to $90 \%$ or $10 \%$ of final value |  | 145 | 230 | ns |
| 1) The input $P 0.1 \mathrm{~dB}$ compression point is a linearity figure of merit. Refer to Table 2 for the operating RF input power ( $50 \Omega$ ). <br> 2) The input intercept point remains invariant over the full supply range as defined in Table 3. |  |  |  |  |  |  |  |

## Switching Capability

The PE42424 has a maximum 125 kHz switching rate with the control pin input capacitance of 2 pF . Switching rate describes the time duration between switching events.
Switching time is the time duration between the point the control signal reaches $50 \%$ of the final value and the point the output signal reaches within $10 \%$ or $90 \%$ of its target value.

## Spurious Performance

Typical spurious performance of the PE42424 is -126 dBm .

## Control Logic Truth Table

Table 4 provides the control logic truth table for the PE42424.
Table 4 - Truth Table for PE42424

| V1 | RFC-RF1 | RFC-RF2 |
| :---: | :---: | :---: |
| 0 | OFF | ON |
| 1 | ON | OFF |

## Typical Performance Data

Figure 2-Figure 10 show the typical performance data @ $25^{\circ} \mathrm{C}$ and $\mathrm{V}_{\mathrm{DD}}=3.3 \mathrm{~V}$, unless otherwise specified.

## Pin Information

This section provides pinout information for the PE42424. Figure 11 shows the pin map of this device for the available package. Table 5 provides a description for each pin.

Figure 11 • Pin Configuration (Top View)

Table 5 : Pin Descriptions for PE42424

| Pin No. | Pin Name | Description |
| :---: | :---: | :---: |
| 1 | V1 | Digital control logic input 1 |
| 2 | RFC ${ }^{*}$ ) | RF common |
| 3 | VDD | Supply voltage (nominal 3.3V) |
| 4 | RF2 ${ }^{*}{ }^{*}$ ) | RF port 2 |
| 5 | GND | Ground |
| 6 | $R F 1{ }^{*}{ }^{*}$ | RF port 1 |
| Pad | GND | Ground |
| Note: * RF pins 2, 4 and 6 must be at OV DC. The RF pins do not require $D C$ blocking capacitors for proper operation if the $O V D C$ requirement is met. |  |  |

## Evaluation Kit

The SPDT switch evaluation board was designed to ease customer evaluation of pSemi's PE42424 RF switch. The RF common port is connected to the device through a $50 \Omega$ transmission line via SMA connector J3. RF1 and RF2 ports are connected to the device through $50 \Omega$ transmission lines via SMA connectors J1 and J2, respectively. A transmission line has been included on the reverse side of the PCB, accessible via SMA connectors J4 and J5. This transmission line provides an equivalent length to deembed PCB trace losses. DC and digital inputs are provided to the device via J6.

This PCB is constructed of a four metal layer material with total thickness of 62 mils. The top and bottom RF layers are Rogers RO4003 material with an 8 mil RF core. The middle layers provide ground for the RF transmission lines. The transmission lines were designed using a coplanar waveguide with ground plane model using a trace width of 16 mils and 10 mil trace gap, with 2.1 mils of metal thickness.
For the true performance of the PE42424 to be realized, the PCB should be designed in such a way that RF transmission lines and sensitive DC I/O traces are heavily isolated from one another.
