General Description

The 856738 is a Surface Acoustic Wave (SAW) based filter suitable for UMTS band 1 and 10 downlink.

856738 is specifically designed to meet the high performance expectations of insertion loss and rejection for UMTS downlink systems under all operating conditions.

This filter is housed in a compact, industry standard 3x3 mm footprint.

Low insertion loss, coupled with high attenuation makes this filter an ideal choice for Base Station Applications.

This filter is part of TriQuint's wide portfolio of RF filters.

Notes:

1. All specifications are based on the test circuit shown below.
2. Production test is performed at room temp. to a guard-banded specification to ensure electrical compliance over temperature.
3. Electrical margin has been built into the design to account for variation due to temperature drift and manufacturing tolerances.
4. Typical values are based on average measurements at room temperature
5. This is the optimum impedance in order to achieve the performance shown.
