

CMD177C36-14 GHz Fundamental Mixer

Product Overview

The CMD177C3 is a general purpose double balanced mixer in a leadless surface mount package that can be used for up- and downconverting applications between 6 and 14 GHz. The CMD177C3 has very high isolation to both the RF and IF ports due to the optimized balun structures, and can operate with an LO drive level as low as +9 dBm. The CMD177C3 can easily be configured as an image reject mixer or single sideband modulator with external hybrids and power splitters.

Recommended Solder Reflow Profile

Qorvo recommends screen printing with belt furnace reflow to ensure proper solder reflow and device attach. Please review Qorvo Application Note AN 102 for a recommended solder reflow profile.

Pin Description

Pin Diagram

Functional Description

Pin	Function	Description	Schematic
1, 3, 4, 6, 7, 9 and die paddle	Ground	Connect to RF / DC ground	GND =
2	LO	This pin is DC coupled and matched to 50 ohms.	
5	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source or sink more than 16 mA of current or part non-function or part failure may result.	
8	RF	This pin is DC coupled and matched to 50 ohms.	RF O
10 - 12	N/C	No connections required. These pins may be connected to RF / DC ground	

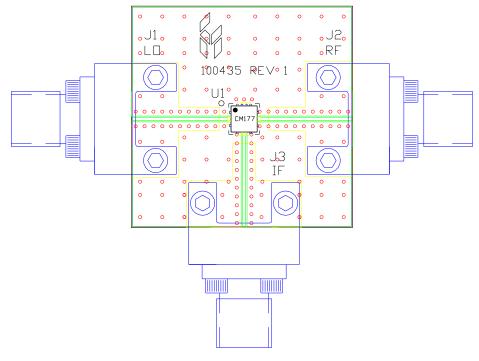

Applications Information

Evaluation Board

The circuit board shown has been developed for optimized assembly at Qorvo. A sufficient number of via holes should be used to connect the top and bottom ground planes. As surface mount processes vary, careful process development is recommended.
