QPA7489A

DC – 3500 MHz Cascadable SiGe HBT Amplifier

Product Overview

The QPA7489A is a high performance SiGe HBT MMIC amplifier. A Darlington configuration provides high FT and excellent thermal performance. The heterojunction increases breakdown voltage and minimizes leakage current between junctions. Cancellation of emitter junction non-linearities results in higher suppression of intermodulation products.

The QPA7489A may be operated from a variety of supply voltages by using a voltage dropping resistor. Two DC-blocking capacitors, bypass capacitors and an optional RF choke complete the circuit required for operation of this internally matched 50 ohm device.

The QPA7489A is assembled in an industry standard SOT-89 package that is lead-free and RoHS-compliant.

Absolute Maximum Ratings

Parameter	Rating
Storage Temp	−55 to +150 °C
Device Voltage (V_D)	+7 V
Device Current (I_D)	170 mA
RF Input Power (Z_L = 50 Ω)	+16 dBm
RF Input Power (Z_L = 10:1 VSWR)*	+2 dBm

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability.

Bias Conditions should also satisfy the following expression:
$I_D \times V_D < (T_{JUNCTION} - T_{LEAD}) / R_{TH}$

* Take into account out of band load VSWR presented by devices such a SAW filters to determine maximum RF input power. Reflected harmonic levels in saturation are significant.
