Notes:

1. Slope is defined as the difference between the gain at the start frequency and the gain at the stop frequency.
2. Flatness is defined as sum of positive and negative deviation from a polynomial (inverse of typical coaxial cable loss over frequency) between gain at start frequency and gain at stop frequency.
3. Either Vc or Vc2 can be used to set slope, internal 1:4 voltage divider between Vc and Vc2.

Evaluation Board Assembly Drawing

The ground plane of the QPC7332 module should be soldered onto a board equipped with thermal vias. We recommend a 0.35mm (#80/.0135") diameter bit for drilling via holes and a final plated thru diameter of 0.25mm (0.010"). In any case the module backside temperature should not exceed 110 °C.

Evaluation board PCB: FR4, double sided, 1.5mm, 35um Cu
