

RFFM8528P

WiFi Front End Module
5180MHz to 5825MHz

The RFFM8528P provides a complete integrated solution in a single front end module (FEM) for WiFi 802.11a/n/ac systems. The next generation ultra-small factor and integrated matching minimizes layout area in the customer's application, reduces the bill of materials and greatly reduces the number of external components. Performance is focused on a balance of efficiency to enable long battery life and linear power that increases the range of connection. The RFFM8528P integrates a 5GHz power amplifier (PA), single pole double throw switch (SP2T), LNA with bypass, and a power detector coupler for improved accuracy. The device is provided in a 2.3mm x 2.3mm x 0.33mm, 16-pin QFN package.

Evaluation Board Schematic

Timing Diagram

Timing Sequence Notes:

802.11a/n/ac Transmit Biasing Instructions

1. Connect the FEM to a signal generator at the input and a spectrum analyzer at the output. Terminate unused ports with 50 Ohms.
2. Set the power supply voltage to 3.3V first with PA_EN \leq 0.2V. Leakage current will be <5uA typical.
3. Refer to switch operational truth table to set the control lines at the proper levels for WiFi TX. All OFF voltages must be \leq 0.2V (cannot be floating).
4. Turn on PA_EN with levels indicated in the datasheet. PA_EN controls the current drawn by the 802.11a/n/ac power amplifier and the current should quickly rise to ~160mA +/- 20mA for a typical part but the actual operating current will be based on the output power desired. Be extremely careful not to exceed 5.0V on the PA_EN pin or the part may exceed device current limits.

802.11a/n/ac Transmit Turn On Sequence (See Transmit Timing Diagram)

1. Turn ON power supply.
2. Turn ON PA_EN.
3. Apply RF.

802.11a/n/ac Transmit Turn Off Sequence

1. Turn OFF RF.
2. Turn OFF PA_EN.
3. Turn OFF power supply.

802.11a/n/ac Receive

1. To receive WiFi set the switch control lines per the truth table.
2. Antenna port is input and RX port is output for this test.
3. Follow Timing Diagram for biasing instructions.

Thermal vias for center slug should be incorporated into the PCB design. The number and size of thermal vias will depend on the application, the power dissipation, and the electrical requirements. Example of the number and size of vias can be found on the RFMD evaluation board layout.
