## 4. APPLICATION CIRCUIT

#### Power supply decoupling:

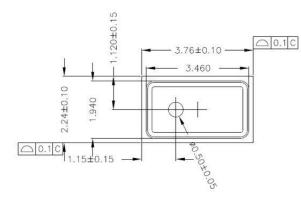

A 0.1uF ceramic type decoupling capacitor C1is strongly recommended for every microphone and it should be placed as close to the VDD pad to reduce the noise on power supply;

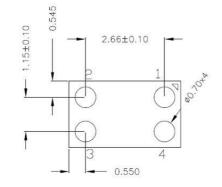

The trace connected to each pad of capacitor should be as short as possible, and should stay on one layer of PCB without via.For the best performance, recommend to place the capacitor equidistance from power and ground pins of microphone, or slightly closer to the power pin if space not allowed. System ground should connect to far side of the capacitor
