SOLDER PROCEDURE

- Deposit solder paste (Sn Ag4 Cu0.5) on solder pads / mounting area by screen printing application. We recommend a low residue flux. We advise a thickness of 150 micron (5.850 microinch). Verify that the edges of the pads are clean.
- Place the component on the mounting area with a pick & place machine. A video camera is recommended for a good positioning of the component. Adhesive agents must not be used on the component.
- This process of soldering has been tested with a convection oven. Below please find the typical soldering profile to use.
- 4. Optional cleaning of printed circuit board.
- 5. Check solder joints and position of the component by visual inspection.

Note: When soldering a receptacle, no plug should be mated to the receptacle before completion of this procedure.

TEMPERATURE PROFILE

Parameter	Value	Unit
