1. General Description

The Realtek RTL8821CU-CG is a highly-integrated IEEE 802.11 a/b/g/n/ac MAC/Baseband/RF WLAN and Bluetooth Baseband/RF single chip. For Wireless LAN (WLAN) operation, it supports 1-stream 802.11ac solution with Multi-user MIMO (Multiple-Input, Multiple-Output) STA mode with USB2.0 network interface controller. For Bluetooth operation, it supports Bluetooth Smart Ready with USB interface controller.

The RTL8821CU-CG baseband implements multiuser Multiple-Input Multiple-Output (MIMO) Orthogonal Frequency Division Multiplexing (OFDM) STA mode with one transmit and one receive path (1T1R). Features include one spatial stream transmission, short Guard Interval (GI) of 400ns, spatial spreading, and support for variant channel bandwidths. Moreover, RTL8821CU-CG provides one spatial stream Space-Time Block Code (STBC) and Low Density Parity Check (LDPC) to extend the range of transmission. As the recipient, the RTL8821CU-CG also supports explicit sounding packet feedback that helps senders with beamforming capability.

For legacy compatibility, Direct Sequence Spread Spectrum (DSSS), Complementary Code Keying (CCK) and OFDM baseband processing are included to support all IEEE 802.11a, 802.11b and 802.11g data rates. Differential phase shift keying modulation schemes, DBPSK and DQPSK with data scrambling capability, are available. CCK provides support for legacy data rates, with long or short preamble. The high speed FFT/IFFT paths are combined with BPSK, QPSK, 16QAM, 64QAM and 256QAM modulation of the individual subcarriers. The compatible coding rate of 1/2, 2/3, 3/4, and 5/6 provides up to 433.3Mbps for IEEE 802.11ac with MIMO-OFDM.

The RTL8821CU-CG builds in an enhanced signal detector, an adaptive frequency domain equalizer, and a soft-decision Viterbi decoder to alleviate severe multi-path effects and mutual interference in the reception of multiple streams. Robust interference detection and suppression are provided to protect against Bluetooth, cordless phone, and microwave oven interference.

Receive vector diversity for multi-stream application is implemented for efficient utilization of the MIMO channel. Efficient IQ-imbalance, DC offset, phase noise, frequency offset, and timing offset compensations are provided for the radio frequency front-end.

The RTL8821CU-CG supports fast receiver Automatic Gain Control (AGC) with synchronous and asynchronous control loops among antennas, antenna diversity functions, and adaptive transmit power control functions to obtain better performance in the analog portions of the transceiver.

The RTL8821CU-CG MAC supports 802.11e for multimedia applications, 802.11i and WAPI (Wireless Authentication Privacy Infrastructure) for security, and 802.11n/ac for enhanced MAC protocol efficiency. Protocol efficiency is significantly improved by using packet aggregation techniques, such as A-MPDU

with BA and A-MSDU. Power saving mechanisms, such as Legacy Power Save, U-APSD, and MIMO, can reduce the power wasted during idle time. They can also compensate for the extra power required to transmit MIMO-OFDM. The RTL8821CU-CG provides simple legacy and 20MHz/40MHz/80MHz co-existence mechanism to ensure backward and network compatibility.

The RTL8821CU-CG Bluetooth controller complies with Bluetooth core specification v4.2, and supports dual mode (BR/EDR + AMP + Low Energy Controllers). It is backward compatible with previous versions including v2.1 + EDR. For BR/EDR, it can support scatternet topology up to four active links in slave mode, and seven active links in master mode. For Low Energy, it supports multiple states and allows eight active links in master mode. Both BR/EDR and LE can operate simultaneously.

2. Features

General Information

- 56pins QFN
- CMOS MAC, Baseband PHY and RF in a single chip for IEEE 802.11a/b/g/n/ac compatible WLAN
- Support 802.11ac 1x1, Wave-2 compliant with MU-MIMO STA mode
- Complete 802.11n MIMO solution for 2.4GHz and 5Ghz band
- Maximum PHY data rate up to 86.7Mbps using 20MHz bandwidth, 200Mbps using 40MHz bandwidth, and 433.3Mbps using 80MHz bandwidth.
- Backward compatible with 802.11a/b/g devices while operating at 802.11n data rates
- Backward compatible with 802.11a/n devices while operating at 802.11ac data rates.

Host Interface

- Complies with USB 2.0 for WLAN and BT controller
- USB Multi-Function for both BT (USB function 0) and WLAN (USB function 1)

Standards Supported

- IEEE 802.11a/b/g/n/ac compatible WLAN
- IEEE 802.11e QoS Enhancement (WMM)
- IEEE 802.11i (WPA, WPA2). Open, shared key, and pair-wise key authentication services
- IEEE 802.11h DFS, TPC, Spectrum Measurement

MAC Features

- Frame aggregation for increased MAC efficiency (A-MSDU, A-MPDU)
- Low latency immediate Block Acknowledgement (BA)
- Long NAV for media reservation with CF-End for NAV release

- USB LPM Selective Suspend supported
- IEEE 802.11k Radio Resource Measurement
- WAPI (Wireless Authentication Privacy Infrastructure) certified.
- Cisco Compatible Extensions (CCX) for WLAN devices

- PHY-level spoofing to enhance legacy compatibility
- Channel management and co-existence
- Multiple BSSID feature allows the RTL8821CU-CG to assume multiple MAC identities when used as a wireless bridge

- Transmit Opportunity (TXOP) Short Inter-Frame Space (SIFS) bursting for higher multimedia bandwidth
- WiFi Direct supports wireless peer to peer applications.
- WiFi NAN (Neighborhood Area Network) support

Other Features

- Supports Wake-On-WLAN via Magic Packet and Wake-up frame
- Transmit Beamforming
- Support S3/S4 AES/TKIP group key update

Peripheral Interfaces

- Up to 15 General Purpose Input/Output pins
- Three configurable LED pins (mux with GPIO pins)

PHY Features

- IEEE 802.11ac OFDM
- IEEE 802.11n OFDM
- One Transmit and One Receive path
- 5MHz / 10MHz / 20MHz / 40MHz / 80MHz bandwidth transmission
- Support 2.4GHz and 5GHz band channels
- Short Guard Interval (400ns)
- Sounding packet.
- DSSS with DBPSK and DQPSK, CCK modulation with long and short preamble
- OFDM with BPSK, QPSK, 16QAM, 64QAM and 256QAM modulation.

- WiFi FTM (Fine Time Measurement) supported
- WiFi TDLS (Tunneled Direct Link Setup) Supported

- Support Network List Offload
- CCA on secondary through RTS/CTS handshake.
- Support TCP/UDP/IP checksum offload
- Generates 40MHz clock for peripheral chip.
- Single external power source 3.3V only

Convolutional Coding Rate: 1/2, 2/3, 3/4, and 5/6

- Maximum data rate 54Mbps in 802.11g, 150Mbps in 802.11n and 433.3bps in 802.11ac.
- Switch diversity used for DSSS/CCK
- Support STBC Receiving
- Support LDPC Transmitting
- Hardware antenna diversity
- Fast receiver Automatic Gain Control (AGC)
- On-chip ADC and DAC
- Build-in both 2.4GHz and 5GHz PA
- Build-in both 2.4GHz and 5GHz LNA

Bluetooth Controller

- Compatible with Bluetooth 2.1+EDR
- Support Bluetooth 4.2 system
- Integrated MCU to execute Bluetooth protocol stack
- Supports all packet types in basic rate and enhanced data rate
- Support Bluetooth 5.0 High Duty Cycle Non-Connectable Advertising

Bluetooth Transceiver

- Fast AGC control to improve receiving dynamic range
- Integrated internal Class 1, Class 2, and Class 3 PA
- Supports Enhanced Power Control

- Supports Secure Simple Pairing
- Enhanced BT/WIFI Coexistence Control to improve transmission quality in different profiles
- Bluetooth 4.0 Dual Mode support: Simultaneous LE and BR/EDR
- Supports multiple Low Energy states

- Supports Bluetooth Low Energy
- Integrated 32K oscillator for power management

5.5. LED Interface

Symbol	Type	Pin No	Description
LED0	O	7	LED Pin (Active Low)
LED1	O	8	LED Pin (Active Low)
LED2	O	9	LED Pin (Active Low), shared with GPIO8

Table 5. LED Interface

5.6. Power Management Handshake Interface

Symbol	Type	Pin No	Description
WL_DIS#	I	37	Shared with GPIO9. This pin can externally shut down the RTL8821CU-CG WLAN function when WL_DIS# is pulled low. When this pin is pulled low, USB interface will be disabled. This pin can also be configured as the WLAN Radio-off function with host interface remaining connected.
BT_DIS#	I	56	Shared with GPIO11. This pin can externally shut down the RTL8821CU-CG BT function when BT_DIS# is pulled Low. When this pin is pulled low, USB interface will be also disabled. This pin can be also defined as the BT Radio-off function with host interface remaining connected.
CHIP_EN	I	47	This Pin Can externally shut down the RTL8821CU-CG (No Extra Power Switch Required). When this function is not required, external pull high is required.

Table 6. Power Management Handshake Interface

5.7. PCM Interface

Symbol	Type	Pin No	Description
PCM_IN	I	1	PCM data Input, shared with GPIO0
PCM_OUT	O	2	PCM data Out, shared with GPIO1
PCM_SYNC	O	3	PCM Synchronization control, shared with GPIO2
PCM_CLK	I/O	4	PCM Clock, shared with GPIO3

Table 7. PCM Interface

5.8. Clock and Other Pins

Symbol	Type	Pin No	Description
XI	I	31	26M/40MHz OSC Input Input of 26M/40MHz Crystal Clock Reference
XO	O	32	Output of 26MHz/40MHz Crystal Clock Reference
SUS_CLK	I	10	Shared with EECS. External 32K or RC clock input.
GPIO0	I/O	1	General Purpose Input/ Output Pin
GPIO1	I/O	2	General Purpose Input/ Output Pin
GPIO2	I/O	3	General Purpose Input/ Output Pin
GPIO3	I/O	4	General Purpose Input/ Output Pin
GPIO4	I/O	5	General Purpose Input/ Output Pin

7. Interface Timing Specification

7.1. USB Bus Timing during Power On Sequence

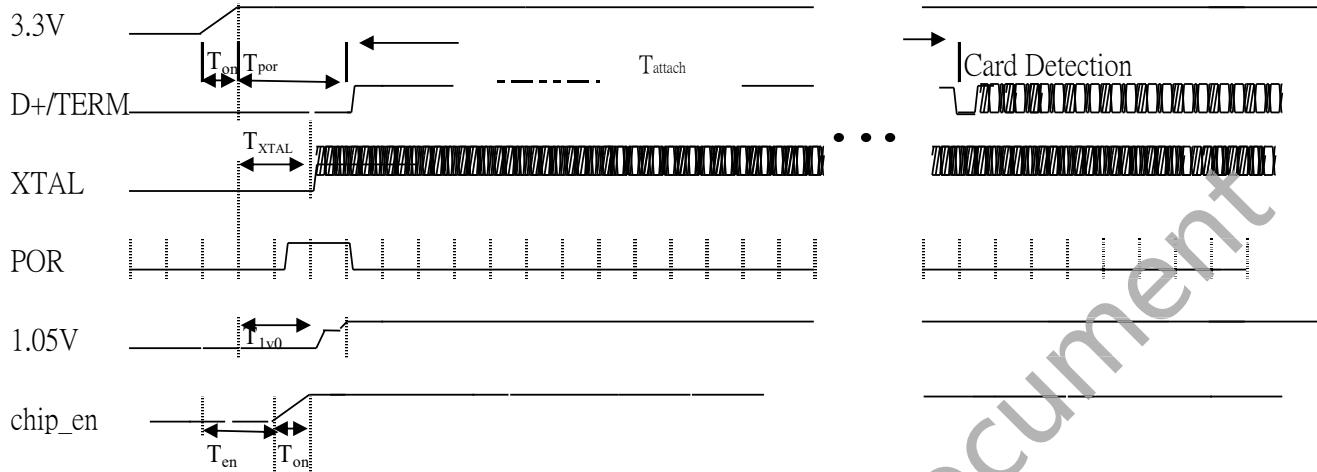

Figure 3. RTL8821CU-CG USB Bus Power On Sequence

T_{on}: The main power ramp up duration

T_{por}: The power on reset releases and power management unit executes power on tasks

T_{attach}: USB attach state. The duration from resistor attached to USB host starting card detection procedure

T_{xtal}: XTAL starts

T_{en}: Interval between the rising point of 3.3V and chip_en

The power on flow description:

After main 3.3V ramp up, the internal power on reset is released by power ready detection circuit and the power management unit will be enabled. The power management unit enables the internal regulator and clock circuits.

The power management unit also enables the USB circuits.

USB analog circuits attach resistors to indicate the insertion of the USB device

Symbol	Unit	Min	Typical	Max
T_{on}	ms	--	1.5	5
T_{por}	ms	--	2	20
T_{xtal}	ms	--	1.5	8
T_{attach}	ms	100	250	--
T_{lv0}	ms	-	3	11
T_{en}	ms	0	0	5

Table 13. The typical timing range

7.2. PCM Interface Characteristics

The RTL8821CU-CG supports a PCM digital audio interface that is used for transmitting digital audio/voice data to/from the Audio Codec. Features are supported as below:

- Supports Master and Slave mode
- Programmable long/short Frame Sync
- Supports 8-bit A-law/ μ -law, and 13/16-bit linear PCM formats
- Supports sign-extension and zero-padding for 8-bit and 13-bit samples
- Supports padding of Audio Gain to 13-bit samples
- PCM Master Clock Output: 64, 128, 256, or 512kHz
- Supports SCO/ESCO link

7.2.1. PCM Format

FrameSync is the synchronizing function used to control the transfer of DAC_Data and ADC_Data. A Long FrameSync indicates the start of ADC_Data at the rising edge of FrameSync (Figure 4), and a Short FrameSync indicates the start of ADC_Data at the falling edge of FrameSync (Figure 5).

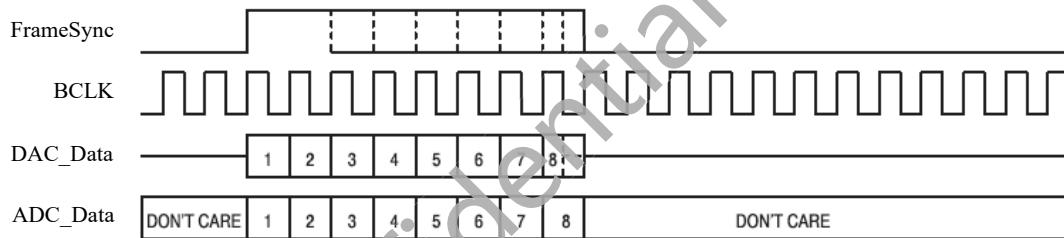

Figure 4. Long FrameSync

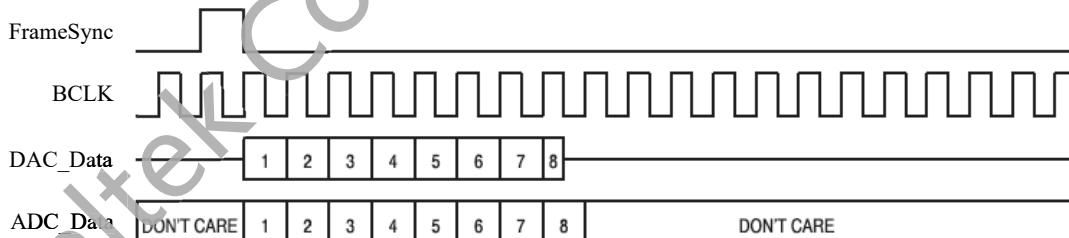

Figure 5. Short FrameSync

7.2.2. Sign Extension and Zero Padding for 8-Bit and 13-Bit Samples

For 16-bit linear PCM output, 3 or 8 unused bits may be sign extended/zero padded (Figure 6, Figure 7, Figure 8, Figure 9)

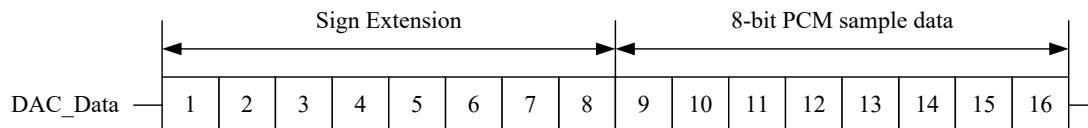

Figure 6. 16-Bit Output Data with 8-Bit PCM Sample Data and Sign Extension

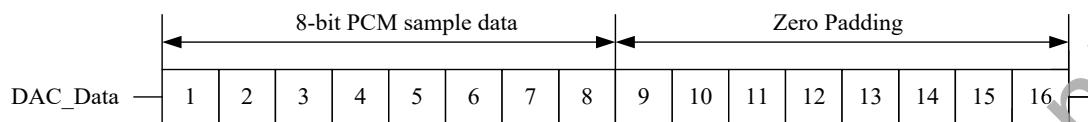

Figure 7. 16-Bit Output Data with 8-Bit PCM Sample Data and Zero Padding

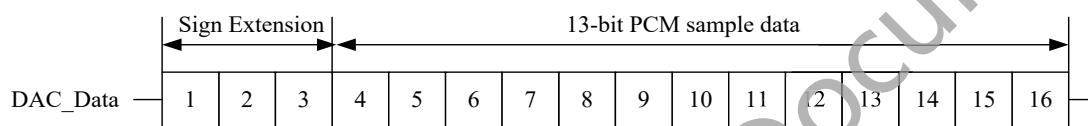

Figure 8. 16-Bit Output Data with 13-Bit PCM Sample Data and Sign Extension

For 16-bit linear PCM output, 3-bit programmable audio gain value can be padded to 13-bit sample data.

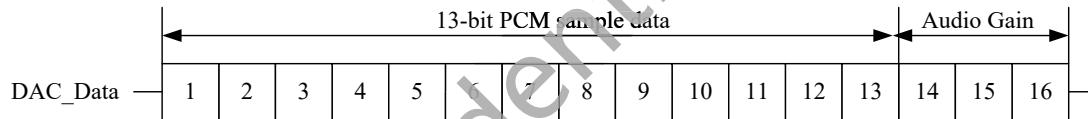

Figure 9. 16-Bit Output Data with 13-Bit PCM Sample Data and Audio Gain

7.2.3. PCM Interface Timing

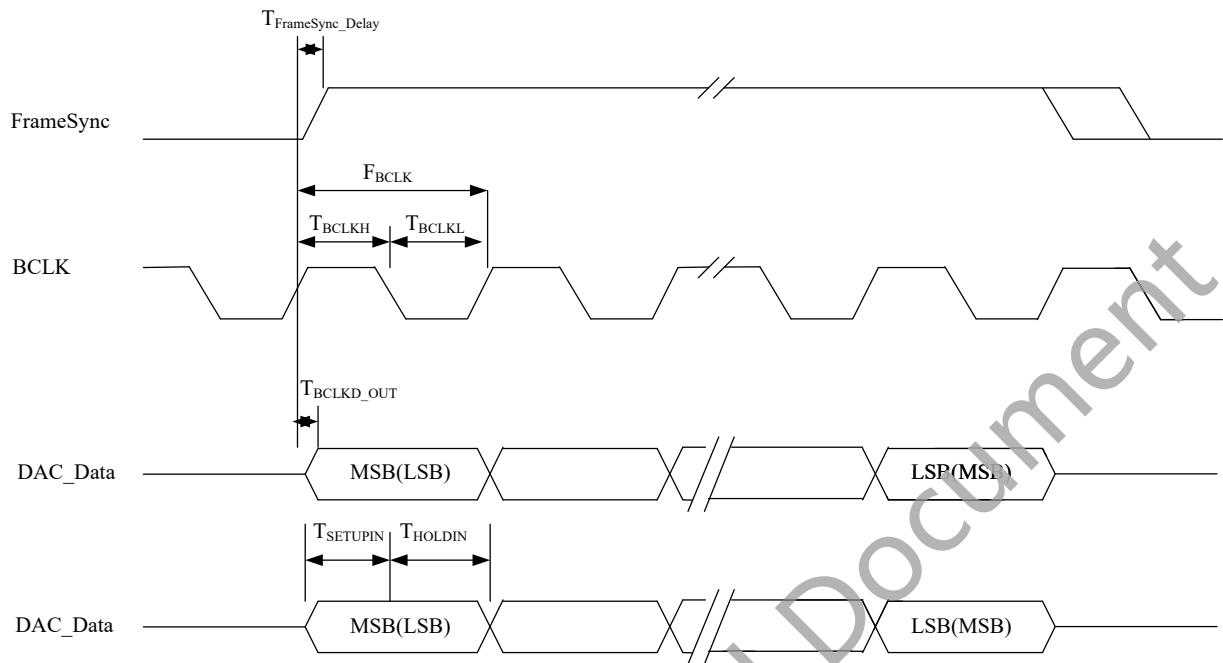

Figure 10. PCM Interface (Long FrameSync)

7.3. System Power Sequence

7.3.1. Power Off Sequence

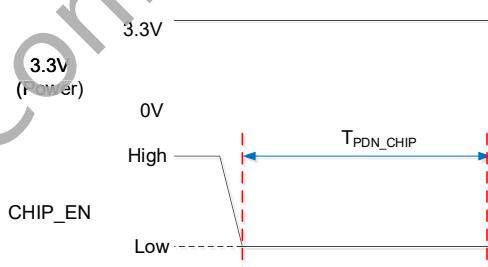

Figure 11. RTL8821CU-CG Power Off Sequence

Table 14. RTL8821CU-CG Power Off Timing Parameters

	Min	Typical	Max	Unit	Description
T_{PDN_CHIP}	100	100	X	ms	CHIP_EN keep low duration

CHIP_EN can externally shutdown the RTL8821CU-CG when CHIP_EN is pulled low. The keeping low duration must be more than T_{PDN_CHIP} .
