

Features

- 2:1 input voltage range
- 1.6kVDC isolation
- UL certified
- Efficiency up to 91%
- Six-sided continuous shield
- No minimum load required

Regulated Converter

RP20-A

20 Watt

1" x 1"

Single and Dual Output

Description

The RP20-A series are ultraminiature 2:1 input voltage range power DC/DC converters in a case half the size of industry standard 20W converters. Despite their small size, the RP20-A converters are fully specified devices with output currents up to 4.5 Amps, up to 91% efficiency, no minimum load, 1600VDC isolation, a built-in Class A EMC filter and low ripple/noise figures. The outputs are also fully protected against short circuits, overcurrent and overvoltage. The no load input current is particularly low (only 4mA/6mA). The RP20-A series will find many uses in applications where board space and/or board height is at a premium or in battery-powered systems where standby current is important.

Notes:

- Note1: Maximum values at nominal input voltage and full load
 Note2: Max. Cap load is tested at minimum Input and constant resistive load

Model Numbering

Notes:

- Note3: standard part is without suffix "P" or "N" = without CTRL & Trim function
 Trim function is only available for single output with /P or /N suffix
 add suffix "P" for CTRL function with positive logic (1=ON, 0=OFF) and trim pin
 add suffix "N" for CTRL function with negative logic (0=ON, 1=OFF) and trim pin
 Note4: add suffix "-HC" for premounted Heat-sink with clamps

Ordering Examples

- RP20-2405SA/P = 24V input, 5V output, single, positive Logic CTRL pin
 RP20-4805DA-HC = 48V input, ±5V output, dual, without CTRL pin, Heat-sink premounted

OUTPUT VOLTAGE TRIMMING

Output Voltage Trimming

Single output Powerline converters offer the feature of trimming the output voltage over a certain range around the nominal value by using external trim resistors. No general equation can be given for calculating the trim resistors, but the following trimtables give typical values for choosing these trimming resistors. If voltages between the given trim points are required, extrapolate between the two nearest given values to work out the resistor required or use a variable resistor to set the output voltage. Output can be externally trimmed by using the method shown below.
