DESCRIPTION

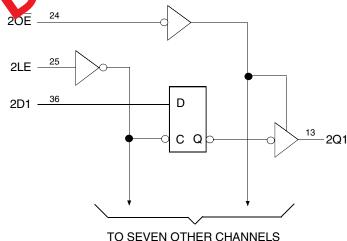

The LVCH16373A 16-bit transparent D-type latch is built using advanced dual metal CMOS technology. This high-speed, low-power latch is ideal for temporary storage of data. The LVCH16373A can be used for implementing memory address latches, I/O ports, and bus drivers. The Output Enable and Latch Enable controls are organized to operate each device as two 8-bit latches or one 16-bit latch. Flow-threagy organization of signal pins simplifies lag ut. All inputs are designed withing teresis for improved noise margin

All pins of the Liv SH2 3373A can be drive arrown. There is 3V or 5V devices. This feature is twisting use of the device as a translator in a mixed 3.3V/5V supply an tell

The LC CH \$373A has "bus cold" which retains the inputs' last state whenever the input goes of a light cold and eliminates the measure of the public dp/down resistors.
