## General Description

The 83052l is a low skew, 2:1, Single-ended Multiplexer. The 83052| has two selectable single-ended clock inputs and one single-ended clock output. The output has a $\mathrm{V}_{\text {Doo }}$ pin which may be set at 3.3 V , 2.5 V , or 1.8 V , making the device ideal for use in voltage trans-lation applications. An output enable pin places the output in a high impedance state which may be useful for testing or debug. The device operates up to 250 MHz and is packaged in an 8 TSSOP.

## Block Diagram

## Features

- 2:1 single-ended multiplexer
- Q nominal output impedance: $15 \Omega\left(\mathrm{~V}_{\mathrm{DoD}}=3.3 \mathrm{~V}\right)$
- Maximum output frequency: 250 MHz
- Propagation delay: 2.7 ns (maximum), $\left(\mathrm{V}_{\mathrm{DD}}=\mathrm{V}_{\mathrm{DDO}}=3.3 \mathrm{~V}\right.$ )
- Input skew: 160ps (maximum), $\left(\mathrm{V}_{\mathrm{DD}}=\mathrm{V}_{\mathrm{DoD}}=3.3 \mathrm{~V}\right)$
- Part-to-part skew: 490ps (maximum), $\left(\mathrm{V}_{\mathrm{DD}}=\mathrm{V}_{\mathrm{DDO}}=3.3 \mathrm{~V}\right)$
- Additive phase jitter, RMS at $155.52 \mathrm{MHz}(12 \mathrm{kHz}-20 \mathrm{MHz})$ : $0.18 p s$ (typical), ( $\mathrm{V}_{\mathrm{DD}}=\mathrm{V}_{\mathrm{DDO}}=3.3 \mathrm{~V}$ )
- Operating supply modes:
$V_{0} / V^{\text {op }}$
$3.3 \mathrm{~V} / 3.3 \mathrm{~V}$
$3.3 \mathrm{~V} / 2.5 \mathrm{~V}$
$3.3 \mathrm{~V} / 1.8 \mathrm{~V}$
$2.5 \mathrm{~V} / 2.5 \mathrm{~V}$
$2.5 \mathrm{~V} / 1.8 \mathrm{~V}$
- $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ ambient operating temperature
- Available in lead-free (RoHS 6) package

## Absolute Maximum Ratings

| Supply Voltage, $\mathrm{V}_{\mathrm{DD}}$ | 4.6 V |
| :--- | :--- |
| Inputs, $\mathrm{V}_{\mathrm{I}}$ | -0.5 V to $\mathrm{V}_{\mathrm{DD}}+0.5 \mathrm{~V}$ |
| Outputs, $\mathrm{V}_{\circ}$ | -0.5 V to $\mathrm{V}_{\mathrm{DDO}}+0.5 \mathrm{~V}$ |
| Package Thermal Impedance, $\theta_{\mathrm{JA}}$ | $101.7^{\circ} \mathrm{C} / \mathrm{W}(0 \mathrm{mps})$ |
| Storage Temperature, $\mathrm{T}_{\mathrm{STG}}$ | $-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ |

NOTE: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the DC Characteristics or AC Characteristics is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

## Additive Phase Jitter

The spectral purity in a band at a specific offset from the fundamental compared to the power of the fundamental is called the $d B c$ Phase Noise. This value is normally expressed using a Phase noise plot and is most often the specified plot in many applications. Phase noise is defined as the ratio of the noise power present in a 1 Hz band at a specified offset from the fundamental frequency to the power value of the fundamental. This ratio is expressed in decibels
$(\mathrm{dBm})$ or a ratio of the power in the 1 Hz band to the power in the fundamental. When the required offset is specified, the phase noise is called a $\boldsymbol{d B c}$ value, which simply means dBm at a specified offset from the fundamental. By investigating jitter in the frequency domain, we get a better understanding of its effects on the desired application over the entire time record of the signal. It is mathematically possible to calculate an expected bit error rate given a phase noise plot.

As with most timing specifications, phase noise measurements has issues relating to the limitations of the equipment. Often the noise floor of the equipment is higher than the noise floor of the device.

This is illustrated above. The device meets the noise floor of what is shown, but can actually be lower. The phase noise is dependant on the input source and measurement equipment.

## Parameter Measurement Information

## Renesas

## Applications Information

## Recommendations for Unused Input Pins

INPUTS:
CLK Input:
For applications not requiring the use of the test clock, it can be left floating. Though not required, but for additional protection, a $1 \mathrm{k} \Omega$ resistor can be tied from the CLK input to ground.
Control Pins:
All control pins have internal pull-ups or pull-downs; additional resistance is not required but can be added for additional protection. A $1 \mathrm{k} \Omega$ resistor can be used.

## Power Considerations

This section provides information on power dissipation and junction temperature for the ICS830521I. Equations and example calculations are also provided.

## 1. Power Dissipation.

The total power dissipation for the ICS830521I is the sum of the core power plus the analog power plus the power dissipated in the load(s).
The following is the power dissipation for $\mathrm{V}_{\mathrm{DD}}=3.3 \mathrm{~V}+5 \%=3.465 \mathrm{~V}$, which gives worst case results.

## Core and LVDS Output Power Dissipation

- Power (core) $)_{\text {MAX }}=V_{D D \_ \text {MAX }}{ }^{*}\left(I_{D D}+I_{D D O}\right)=3.4565 V$ * $(40 \mathrm{~mA}+5 \mathrm{~mA})=155.93 \mathrm{~mW}$
- Output Impedance $\mathrm{R}_{\text {out }}$ Power Dissipation due to Loading $50 \Omega$ to $\mathrm{V}_{\text {oD }} / 2$

Output Current $\mathrm{I}_{\text {out }}=\mathrm{V}_{\text {Ddo_max }} /\left[2^{*}\left(50 \Omega+\mathrm{R}_{\text {OUT }}\right)\right]=3.465 /[2$ * $(50 \Omega+15 \Omega)]=\mathbf{2 6 . 7} \mathbf{m A}$

- Power Dissipation on the $\mathrm{R}_{\text {out }}$ per LVCMOS output
$\operatorname{Power}\left(R_{\text {out }}\right)=R_{\text {out }}{ }^{*}\left(I_{\text {out }}\right)^{2}=15 \Omega$ * $(26.7 \mathrm{~mA})^{2}=10.7 \mathrm{~mW}$

## Dynamic Power Dissipation at $\mathbf{2 5 0 M H z}$

- Power (250MHz) $=\mathrm{C}_{\mathrm{PD}}{ }^{*}$ frequency * $\left(\mathrm{V}_{\mathrm{DD}}\right)^{2}=18 \mathrm{pF}{ }^{*} 250 \mathrm{MHz}{ }^{*}(3.465 \mathrm{~V})^{2}=54.0 \mathrm{~mW}$

## Total Power Dissipation

- Total Power
$=$ Power (core) $)_{\text {max }}+$ Power $\left(\mathrm{R}_{\text {out }}\right) \quad$ Total Power + Power $(250 \mathrm{MHz})$
$=155.93 \mathrm{~mW}+10.7 \mathrm{~mW}+54.0 \mathrm{~mW}$
$=220.6 \mathrm{~mW}$

## 2. Junction Temperature

Junction temperature, Tj , is the temperature at the junction of the bond wire and bond pad directly affects the reliability of the device. The maximum recommended junction temperature is $125^{\circ} \mathrm{C}$. Limiting the internal transistor junction, TJ, to $125^{\circ} \mathrm{C}$ ensures that the bond wire and bond pad temperature remains below $125^{\circ} \mathrm{C}$.

The equation for $\mathrm{Tj}_{\mathrm{j}}$ is as follows: $\mathrm{Tj}=\theta_{\mathrm{JA}}$ * Pd _total $+\mathrm{T}_{\mathrm{A}}$
$\mathrm{Tj}=$ Junction Temperature
$\theta_{\mathrm{JA}}=$ Junction-to-Ambient Thermal Resistance
Pd_total $=$ Total Device Power Dissipation (example calculation is in section 1 above)

$$
T_{A}=\text { Ambient Temperature }
$$

In order to calculate junction temperature, the appropriate junction-to-ambient thermal resistance $\theta_{\lrcorner A}$ must be used. Assuming no air flow and a multi-layer board, the appropriate value is $101.7^{\circ} \mathrm{C} / \mathrm{W}$ per Table 6 .

Therefore, Tj for an ambient temperature of $85^{\circ} \mathrm{C}$ with all outputs switching is:
$85^{\circ} \mathrm{C}+0.221 \mathrm{~W} * 101.7^{\circ} \mathrm{C} / \mathrm{W}=107.4^{\circ} \mathrm{C}$. This is below the limit of $125^{\circ} \mathrm{C}$.
This calculation is only an example. Tj will obviously vary depending on the number of loaded outputs, supply voltage, air flow, and the type of board (multi-layer).
Table 6. $\theta_{\text {ja }}$ vs. Air Flow Table for 8 Lead TSSOP

| $\theta_{د A}$ BY Velocity |  |  |  |
| :--- | :---: | :---: | :---: |
| Meters per Second | $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{2 . 5}$ |
| Multi-Layer PCB, JEDEC Standard Test Boards | $101.7^{\circ} \mathrm{C} / \mathrm{W}$ | $90.5^{\circ} \mathrm{C} / \mathrm{W}$ | $89.8^{\circ} \mathrm{C} / \mathrm{W}$ |

## Renesas

## Reliability Information

Transistor Count
The transistor count for 83052l is: 967

Package Outline - G Suffix for 8 Lead TSSOP

Table 7. Package Dimensions

| SYMBOL | Millimeters |  |
| :---: | :---: | :---: |
|  | Minimum | Maximum |
| N | 8 |  |
| A | -- | 1.20 |
| A1 | 0.05 | 0.15 |
| A2 | 0.80 | 1.05 |
| b | 0.19 | 0.30 |
| c | 0.09 | 0.20 |
| D | 2.90 | 3.10 |
| E | 6.40 BASIC |  |
| E1 | 4.30 | 4.50 |
| e | 0.65 BASIC |  |
| L | 0.45 | 0.75 |
| $\alpha$ | $0^{\circ}$ | $8^{\circ}$ |
| aaa | -- | 0.10 |

Reference Document: JEDEC Publication 95, MO-153

## Renesas

Table 8. Ordering Information

| Part/Order Number | Marking | Package | Shipping Packaging | Temperature |
| :---: | :---: | :---: | :---: | :---: |
| 83052AGILF | 52AIL | 8 lead "Lead-Free" TSSOP | tube | $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ |
| 83052AGILFT | 52AIL | 8 lead "Lead-Free" TSSOP | tape \& reel | $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ |

## Renesns

| REVISION HISTORY SHEET |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Rev | Table | Page | Description of Change | Date |
| B | $\begin{gathered} \text { 4A, 4B } \\ \text { T8 } \end{gathered}$ | $\begin{gathered} \hline 3 \\ 12 \end{gathered}$ | Power Supply Tables - corrected $\mathrm{V}_{\text {Doo }} \mathrm{min} / \mathrm{max}$. Ordering Information Table - added lead-free marking. | 8/7/06 |
| B | T8 | 12 | Ordering Information Table - corrected lead-free marking. | 3/16/07 |
| B | T4B | 3 | 2.5 V Power Supply Table - corrected units for $\mathrm{I}_{\text {DD }}$ \& $\mathrm{I}_{\text {DDO }}$. | 6/25/08 |
| B | $\begin{gathered} \mathrm{T} 5 \mathrm{~A}, 5 \mathrm{~B}, \\ 5 \mathrm{C}, 5 \mathrm{D}, 5 \mathrm{E}, \end{gathered}$ | $\begin{gathered} \text { All, } \\ 4,5,6 \\ 11,12 \\ 17 \end{gathered}$ | Updated Header and Footer. Added Note to Tables.Updated Contact Information. Added Power Considerations section. Updated Contact Information. | 12/8/11 |
| B | T8 | $\begin{gathered} \hline 1 \\ 15 \end{gathered}$ | Features Section - removed reference to leaded package. Removed prefix ICS in part number. <br> Ordering Information - Removed leaded parts and the LF note below the table. Updated Header and Footer. | 12/15/15 |
