

## GENERAL DESCRIPTION

This document describes the specifications for the IDTF1192 Dual Wideband, Gain-Settable, Zero-Distortion™ Flat-Noise™, RF to IF Downconverting Mixer.

The F1192 offers very low power consumption with excellent linearity. In addition to this and the four dynamically adjustable gain settings, the F1192 performance is exceptional across an extremely broad range of RF and IF frequencies. All of this makes it ideal for myriad applications including:

- 2G/3G/4G/5G/Multimode Remote Radio Units
- High order MIMO systems,  $\mu$ cells, picocells, DAS
- Point to Point  $\mu$ Wave Backhaul systems
- Broadband Repeaters
- Public Safety Infrastructure
- Any radio system operating between 400 MHz and 4000 MHz

## COMPETITIVE ADVANTAGE

F1192 offers maximum performance and flexibility at minimum power consumption. The unique and patented settable-gain feature allows it to be used in a very wide variety of radiocard applications, even allowing for dynamic adjustment of gain to maximize performance on the fly. The extremely wide RF and IF bandwidths are achieved with a fixed BOM with all internal matching. The device can function with as little as -6 dBm LO power and with independent channel shutdown modes for ease of integration into high order TDD MIMO systems.

## BAND PERFORMANCE SUMMARY

RF Frequency (MHz)	900	1900	2600	3500
Gain (max $G_{11}$ setting)	11.0	10.8	10.3	9.0
Gain (min $G_2$ setting)	2.5	2.3	1.8	0.5
NF @ max gain (dB)	8.9	8.7	10.0	10.9
IIP3 @ min gain (dBm)	28	27	29	30
OIP3 @ $G_8$ (dBm)	37	34	35	35
IP1dB @ min gain (dBm)	13.6	14.7	14.6	15.8
2x2 @ min gain (dBc)	-75	-82	-73	-68
Channel Isolation (dB)	48	47	48	45
Pdiss (mW)	792	835	875	935

## FEATURES

- RF range: 400MHz to 3800MHz
- LO range: 400MHz to 3600MHz
- IF Range: 50MHz to 600MHz
- Dual Path for MIMO
- 4 Gain Settings; 11dB, 8dB, 5dB, 2dB
- 2 bit gain step control
- Ideal for Multi-Carrier Systems
- +35dBm OIP3
- Low Noise Figure at any gain setting via IDT's FlatNoise™ technology
- $Z = 200 \Omega$  IF balanced,  $50 \Omega$  RF,  $50 \Omega$  LO single ended
- All internally matched. Single BOM for all RF, LO and IF frequencies
- 4 mm x 4 mm, 24-pin TQFN package
- Independent Path Standby mode
- 75 nsec settling for gain adjustment
- $VCC = 3.3V$ , 835 mW, 620 mW (low power mode)

## FUNCTIONAL BLOCK DIAGRAM

## ORDERING INFORMATION

## ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Min	Max	Units
VCC to GND	V <sub>CC</sub>	-0.5	+3.6	V
STBY_A, STBY_B, Gain_Select1, Gain_Select2, RF_A, RF_B, LO1_ADJ, LO2_ADJ	V <sub>CTRL</sub>	-0.5	V <sub>CC</sub> + 0.5	V
IF_A+, IF_A-, IF_B+, IF_B-	IF <sub>OUT</sub>	2.4	V <sub>CC</sub> + 0.5	V
LO_IN	LO <sub>IN</sub>	-0.5	+0.5	V
IF_BiasA, IF_BiasB	IF <sub>BIAS</sub>		50	ohms
IF_Ref_Bias	IF <sub>REF</sub>		500	ohms
RF Input Power (RF_A, RF_B) continuous	RF <sub>MAX</sub>		+20	dBm
LO Input Power (LO_IN) continuous	LO <sub>MAX</sub>		+20	dBm
Continuous Power Dissipation	P <sub>DISS</sub>		1.5	W
Junction Temperature	T <sub>J</sub>		150	°C
Storage Temperature Range	T <sub>ST</sub>	-65	150	°C
Lead Temperature (soldering, 10s)	T <sub>LEAD</sub>		260	°C
ElectroStatic Discharge – HBM (JEDEC/ESDA JS-001-2012)			Class 2 (2500 V)	
ElectroStatic Discharge – CDM (JEDEC 22-C101F)			Class C3 (1000 V)	

*Stresses above those listed above may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

## PACKAGE THERMAL AND MOISTURE CHARACTERISTICS

$\theta_{JA}$ (Junction – Ambient)	45 °C/W
$\theta_{JC}$ (Junction – Case) [The Case is defined as the exposed paddle]	2.1 °C/W
Moisture Sensitivity Rating (Per J-STD-020)	MSL1

## F1192 RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Comment	min	typ	max	Units
Supply Voltage(s)	$V_{CC}$	All $V_{CC}$ pins	3.15		3.45	V
Operating Temperature Range	$T_{CASE}$	Case Temperature	-40		+105	deg C
RF Freq Range	$F_{RF}$		400		3800	MHz
LO Freq Range	$F_{LO}$		400		3600	
IF Range	$F_{IF}$		50		600	
LO Power	$P_{LO}$	Operating Range	-6		+6	dBm

## IDTF1192 SPECIFICATION (GENERAL)

Typical Application Circuit,  $V_{CC} = +3.3V$ ,  $T_C = +25^\circ C$ ,  $F_{RF} = 900MHz$ ,  $F_{IF} = 199MHz$ ,  $F_{LO} = 1100MHz$ ,  $P_{LO} = 0\text{ dBm}$ ,  $P_{IN} = -10dBm$  per tone for all gain settings unless otherwise stated,  $STBY\_A = STBY\_B = LOW$ . EVkit IF transformer losses are de-embedded unless otherwise noted.

Parameter	Symbol	Comment	min	typ	max	units
Logic Input High <sup>3</sup>	$V_{IH}$	For all control pins	<b><i>1.1</i></b> <sup>1</sup>			V

**TYPICAL OPERATING CONDITIONS (TOC)**

Unless otherwise Noted, the following Apply to the Typ Ops Graphs

- High Side Injection for RF frequencies below 1.2 GHz
- Low Side Injection for RF frequencies from 1.3 to 2.7 GHz
- 199MHz IF
- 800KHz Tone Spacing
- All measurements fully de-embedded for trace, connector, transformer losses
- Pin = -10dBm for 2x2, 3x3, Gain
- Pout = 0 dBm/Tone for IP3
- LO level = 0 dBm,  $V_{CC} = 3.30\text{ V}$
- Listed Temperatures are Case Temperature (TC = Case Temperature)
- Where noted, TA or TAMB = Ambient Temperature

TOCs (-) Fixed IF = 199 MHz - IIP3, OIP3, and Gain

IIP3 vs. Temperature and Gain Setting

IIP3 vs. LO Power and Gain Setting (Vcc = 3.15, Tcase = 105C)

OIP3 vs. Temperature and Gain Setting

OIP3 vs. LO Power and Gain Setting (Vcc = 3.15, Tcase = 105C)

Gain vs. Temperature and Gain Setting

**PIN DIAGRAM**

Red denotes internal connection

## PIN DESCRIPTION

Pin	Name	Function
1	RF_A	Main Channel RF Input. Matched to 50 ohms. DO NOT apply DC to this pin.
2, 5, 15	RF_A_rtn, RF_B_rtn, LO_rtn	Transformer Ground Returns. Ground these pins.
3, 4	N.C.	Not Connected
6	RF_B	Diversity Channel RF Input. Matched to 50 ohms. DO NOT apply DC to this pin.
7, 18, 24	VCC	Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
8	IF_BiasB	Connect the specified resistor from this pin to ground to set the bias for the Diversity IF amplifier.
9, 10	IFB+, IFB-	Diversity Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).
11	Gain_Select1	Gain select control pin logic includes internal pull-down resistor. See gain select truth table for desired setting
12	Gain_Select2	Gain select control pin logic includes internal pull-down resistor. See gain select truth table for desired setting
13	IFRef_Bias	Connect the specified resistor from this pin to ground to set the IF amplifier reference current.
14	LO1_ADJ	Connect 0 ohm resistor to GND for best performance.
16	LO_IN	Local Oscillator Input. DO NOT apply DC to this pin.
17	LO2_ADJ	Connect 0 ohm resistor to GND for best performance.
19	STBY_A	Standby Channel A (Low/Open = Channel A power ON, High = Channel A power OFF). Includes internal pull-down resistor.
20	STBY_B	Standby Channel B (Low/Open = Channel B power ON, High = Channel B power OFF). Includes internal pull-down resistor.
21, 22	IFA-, IFA+	Main Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).
23	IF_BiasA	Connect the specified resistor from this pin to ground to set the bias for the Main IF amplifier.
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the specified RF performance.

**APPLICATIONS INFORMATION**

**Power Supplies**

A common VCC power supply should be used for all pins requiring DC power. All supply pins should be bypassed with external capacitors to minimize noise and fast transients. Supply noise can degrade noise figure and fast transients can trigger ESD clamps and cause them to fail. Supply voltage change or transients should have a slew rate smaller than 1V/20uS. In addition, all control pins should remain at 0V (+/-0.3V) while the supply voltage ramps or while it returns to zero.

**Control Pin Interface**

If control signal integrity is a concern and clean signals cannot be guaranteed due to overshoot, undershoot, ringing, etc., provisions for an R-C circuit at the input of each control pin is recommended. This applies to pins 11, 12, 19, and 20 as shown below.

### INDEPENDENT CHANNEL STANDBY

F1192 provides an independent path standby feature to reduce power consumption with a dedicated pin for each path. The following table summarizes the required pin logic to achieve the desired standby setting. Internal pull down resistors are included requiring no control to enable both channels.

Channel A	STBY_A Pin 19
ON	0
OFF	1
Channel B	STBY_B Pin 20
ON	0
OFF	1

### GAIN SELECT

F1192 provides a gain select feature requiring 2 pins for logic control. The following table summarizes the required pin logic to achieve the desired gain setting. Internal pull down resistors are included requiring no control to set both channels to maximum gain.

Desired Power Gain (dB)	Gain Select1 Pin 11	Gain Select2 Pin 12
11	0	0
8	0	1
5	1	0
2	1	1

### DEFAULT START-UP

Upon start-up, the device gain will be whatever the gain select pins are set for as defined in the table above.

### TOP MARKINGS
