Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: http://www.renesas.com

April 1st, 2010 Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (http://www.renesas.com)

Send any inquiries to http://www.renesas.com/inquiry.

Notice

- 1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
- Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights
 of third parties by or arising from the use of Renesas Electronics products or technical information described in this document.
 No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights
 of Renesas Electronics or others.
- 3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
- 4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
- 5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
- 6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
- 7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
- 8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
- 9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
- 10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

R8C/18 Group, R8C/19 Group SINGLE-CHIP 16-BIT CMOS MCU

REJ03B0124-0140 Rev.1.40 Apr 14, 2006

1. Overview

These MCUs are fabricated using a high-performance silicon gate CMOS process, embedding the R8C/Tiny Series CPU core, and is packaged in a 20-pin molded-plastic LSSOP, SDIP or a 28-pin plastic molded-HWQFN. It implements sophisticated instructions for a high level of instruction efficiency. With 1 Mbyte of address space, they are capable of executing instructions at high speed.

Furthermore, the R8C/19 Group has on-chip data flash ROM (1 KB x 2 blocks).

The difference between the R8C/18 Group and R8C/19 Group is only the presence or absence of data flash ROM. Their peripheral functions are the same.

1.1 Applications

Electric household appliances, office equipment, housing equipment (sensors, security systems), general industrial equipment, audio equipment, etc.

1.2 Performance Overview

Table 1.1 outlines the Functions and Specifications for R8C/18 Group and Table 1.2 outlines the Functions and Specifications for R8C/19 Group.

Table 1.1 Functions and Specifications for R8C/18 Group

	Item	Specification
CPU	Number of fundamental	89 instructions
CFU	instructions	os instructions
	Minimum instruction execution	50 ns (f(XIN) = 20 MHz, VCC = 3.0 to 5.5 V)
	time	100 ns (f(XIN) = 10 MHz, VCC = 2.7 to 5.5 V)
	Operation mode	Single-chip
	Address space	1 Mbyte
	Memory capacity	Refer to Table 1.3 Product Information for R8C/18
	Memory dapatory	Group
Peripheral	Ports	I/O ports: 13 pins (including LED drive port)
Functions	. 5.15	Input port: 3 pins
T directions	LED drive ports	I/O ports: 4 pins
	Timers	Timer X: 8 bits × 1 channel, timer Z: 8 bits × 1 channel
		(Each timer equipped with 8-bit prescaler)
		Timer C: 16 bits × 1 channel
		(Input capture and output compare circuits)
	Serial interfaces	1 channel
		Clock synchronous serial I/O, UART
		1 channel
		UART
	Comparator	1-bit comparator: 1 circuit, 4 channels
	Watchdog timer	15 bits × 1 channel (with prescaler)
	Trateria g umer	Reset start selectable, count source protection mode
	Interrupts	Internal: 10 sources, External: 4 sources, Software: 4
		sources,
		Priority levels: 7 levels
	Clock generation circuits	2 circuits
		Main clock oscillation circuit (with on-chip feedback
		resistor)
		On-chip oscillator (high speed, low speed)
		High-speed on-chip oscillator has frequency
		adjustment function
	Oscillation stop detection	Main clock oscillation stop detection function
	function	Thair older decimalism didp detection randism
	Voltage detection circuit	On-chip
	Power-on reset circuit	On-chip
Electric	Supply voltage	VCC = 3.0 to 5.5 V (f(XIN) = 20 MHz)
Characteristics		VCC = 2.7 to 5.5 V (f(XIN) = 10 MHz)
	Current consumption	Typ. 9 mA (VCC = 5.0 V, f(XIN) = 20 MHz, comparator stopped)
		Typ. 5 mA (VCC = 3.0V, f(XIN) = 10 MHz, comparator stopped)
		Typ. 35 μ A (VCC = 3.0 V, wait mode, peripheral clock off)
		Typ. 0.7 μA (VCC = 3.0 V, stop mode)
Flash Memory	Programming and erasure voltage	VCC = 2.7 to 5.5 V
,	Programming and erasure	100 times
	endurance	
Operating Ambi	ent Temperature	-20 to 85°C
		-40 to 85°C (D version)
Package		20-pin molded-plastic LSSOP
		20-pin molded-plastic SDIP
		28-pin molded-plastic HWQFN

1.6 Pin Functions

Table 1.5 lists Pin Functions, Table 1.6 lists Pin Name Information by Pin Number of PLSP0020JB-A, PRDP0020BA-A packages, and Table 1.7 lists Pin Name Information by Pin Number of PWQN0028KA-B package.

Table 1.5 Pin Functions

Type	Symbol	I/O Type	Description
Power supply input	VCC VSS	I	Apply 2.7 V to 5.5 V to the VCC pin. Apply 0 V to the VSS pin.
Analog power supply input	AVCC, AVSS	I	Power supply for the comparator Connect a capacitor between AVCC and AVSS.
Reset input	RESET	I	Input "L" on this pin resets the MCU.
MODE	MODE	I	Connect this pin to VCC via a resistor.
Main clock input	XIN	I	These pins are provided for main clock generation circuit I/O. Connect a ceramic resonator or a crystal oscillator between the XIN and XOUT pins.
Main clock output	XOUT	0	To use an external clock, input it to the XIN pin and leave the XOUT pin open.
INT interrupt	INTO, INT1, INT3	I	INT interrupt input pins
Key input interrupt	KI0 to KI3	I	Key input interrupt input pins
Timer X	CNTR0	I/O	Timer X I/O pin
	CNTR0	0	Timer X output pin
Timer Z	TZOUT	0	Timer Z output pin
Timer C	TCIN	I	Timer C input pin
	CMP0_0 to CMP0_2, CMP1_0 to CMP1_2	0	Timer C output pins
Serial interface	CLK0	I/O	Transfer clock I/O pin
	RXD0, RXD1	I	Serial data input pins
	TXD0, TXD1	0	Serial data output pins
Reference voltage input	VREF	I	Reference voltage input pin to comparator
Comparator	AN8 to AN11	I	Analog input pins to comparator
I/O port	P1_0 to P1_7, P3_3 to P3_5, P3_7, P4_5	I/O	CMOS I/O ports. Each port has an I/O select direction register, allowing each pin in the port to be directed for input or output individually. Any port set to input can be set to use a pull-up resistor or not by a program. P1_0 to P1_3 also function as LED drive ports.
Input port	P4_2, P4_6, P4_7	I	Input-only ports

I: Input

O: Output

I/O: Input and output

2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU Registers. The CPU contains 13 registers. R0, R1, R2, R3, A0, A1, and FB configure a register bank. There are two sets of register bank.

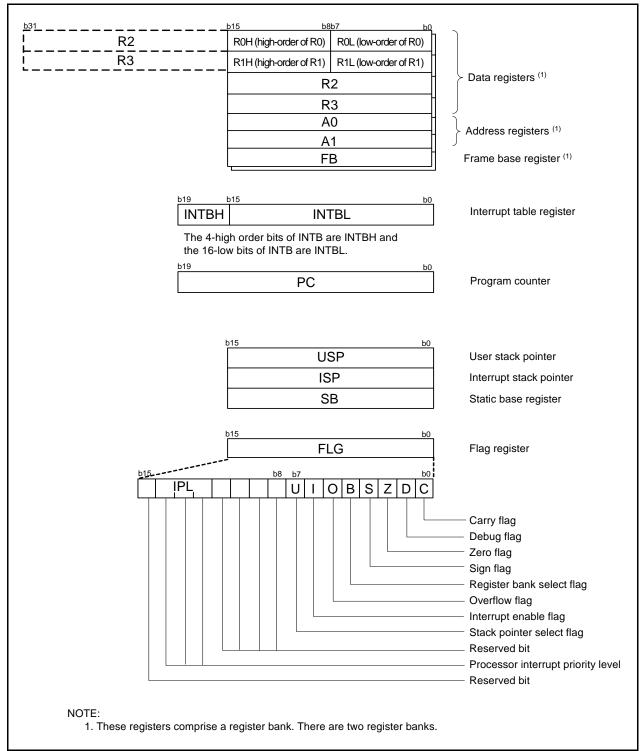

Figure 2.1 CPU Registers

2.1 Data Registers (R0, R1, R2, and R3)

R0 is a 16-bit register for transfer, arithmetic, and logic operations. The same applies to R1 to R3. R0 can be split into high-order bits (R0H) and low-order bits (R0L) to be used separately as 8-bit data registers. R1H and R1L are analogous to R0H and R0L. R2 can be combined with R0 and used as a 32-bit data register (R2R0). R3R1 is analogous to R2R0.

2.2 Address Registers (A0 and A1)

A0 is a 16-bit register for address register indirect addressing and address register relative addressing. It is also used for transfer, arithmetic and logic operations. A1 is analogous to A0. A1 can be combined with A0 and used as a 32-bit address register (A1A0).

2.3 Frame Base Register (FB)

FB is a 16-bit register for FB relative addressing.

2.4 Interrupt Table Register (INTB)

INTB is a 20-bit register that indicates the start address of an interrupt vector table.

2.5 Program Counter (PC)

PC is 20 bits wide, indicates the address of the next instruction to be executed.

2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointer (SP), USP, and ISP, are each 16 bits wide. The U flag of FLG is used to switch between USP and ISP.

2.7 Static Base Register (SB)

SB is a 16-bit register for SB relative addressing.

2.8 Flag Register (FLG)

FLG is an 11-bit register indicating the CPU state.

2.8.1 Carry Flag (C)

The C flag retains a carry, borrow, or shift-out bits that have been generated by the arithmetic and logic unit.

2.8.2 Debug Flag (D)

The D flag is for debugging only. Set it to 0.

2.8.3 **Zero Flag (Z)**

The Z flag is set to 1 when an arithmetic operation results in 0; otherwise to 0.

2.8.4 **Sign Flag (S)**

The S flag is set to 1 when an arithmetic operation results in a negative value; otherwise to 0.

2.8.5 Register Bank Select Flag (B)

Register bank 0 is selected when the B flag is 0. Register bank 1 is selected when this flag is set to 1.

2.8.6 Overflow Flag (O)

The O flag is set to 1 when the operation results in an overflow; otherwise to 0.

2.8.7 Interrupt Enable Flag (I)

The I flag enables maskable interrupts.

Interrupts are disabled when the I flag is set to 0, and are enabled when the I flag is set to 1. The I flag is set to 0 when an interrupt request is acknowledged.

2.8.8 Stack Pointer Select Flag (U)

ISP is selected when the U flag is set to 0; USP is selected when the U flag is set to 1.

The U flag is set to 0 when a hardware interrupt request is acknowledged or the INT instruction of software interrupt numbers 0 to 31 is executed.

2.8.9 Processor Interrupt Priority Level (IPL)

IPL is 3 bits wide, assigns processor interrupt priority levels from level 0 to level 7. If a requested interrupt has higher priority than IPL, the interrupt is enabled.

2.8.10 Reserved Bit

If necessary, set to 0. When read, the content is undefined.

3. Memory

3.1 R8C/18 Group

Figure 3.1 is a Memory Map of R8C/18 Group. The R8C/18 Group has 1 Mbyte of address space from addresses 00000h to FFFFFh.

The internal ROM area is allocated lower addresses, beginning with address 0FFFFh. For example, a 16-Kbyte internal ROM is allocated addresses 0C000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. They store the starting address of each interrupt routine.

The internal RAM is allocated higher addresses, beginning with address 00400h. For example, a 1-Kbyte internal RAM area is allocated addresses 00400h to 007FFh. The internal RAM is used not only for storing data but also for calling subroutines and as stacks when interrupt requests are acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh. The peripheral function control registers are allocated here. All addresses within the SFR, which have nothing allocated are reserved for future use and cannot be accessed by users.

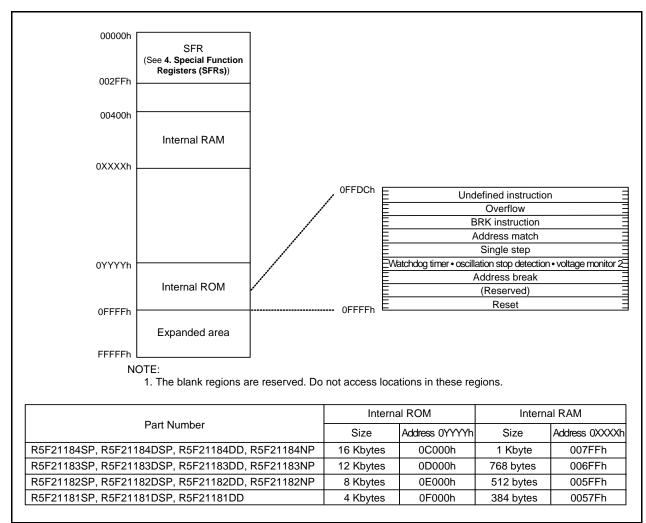

Figure 3.1 Memory Map of R8C/18 Group

3.2 R8C/19 Group

Figure 3.2 is a Memory Map of R8C/19 Group. The R8C/19 group has 1 Mbyte of address space from addresses 00000h to FFFFFh.

The internal ROM (program ROM) is allocated lower addresses, beginning with address 0FFFFh. For example, a 16-Kbyte internal ROM area is allocated addresses 0C000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. They store the starting address of each interrupt routine.

The internal ROM (data flash) is allocated addresses 02400h to 02BFFh.

The internal RAM is allocated higher addresses, beginning with address 00400h. For example, a 1-Kbyte internal RAM area is allocated addresses 00400h to 007FFh. The internal RAM is used not only for storing data but also for calling subroutines and as stacks when interrupt requests are acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh. The peripheral function control registers are allocated here. All addresses within the SFR, which have nothing allocated are reserved for future use and cannot be accessed by users.

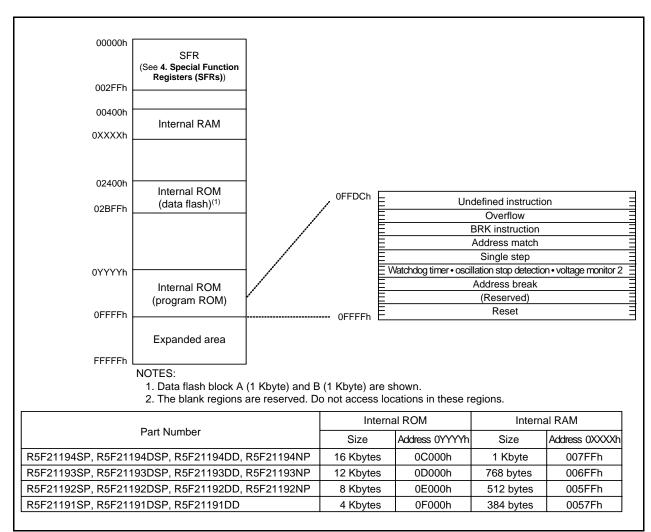

Figure 3.2 Memory Map of R8C/19 Group

4. Special Function Registers (SFRs)

An SFR (special function register) is a control register for a peripheral function. Tables 4.1 to 4.4 list the special function registers.

Table 4.1 SFR Information (1)⁽¹⁾

Address	Pogiator	Cymbol	After reset

X: Undefined

- 1. The blank regions are reserved. Do not access locations in these regions.
- 2. Software reset, watchdog timer reset, and voltage monitor 2 reset do not affect this register.
- 3. After hardware reset.
- 4. After power-on reset or voltage monitor 1 reset.
- 5. Software reset, watchdog timer reset, and voltage monitor 2 reset do not affect b2 and b3.

=	Program, erase temperature		0	=	60	°C
=	Data hold time ⁽⁸⁾	Ambient temperature = 55 °C	20	-	_	year

- 1. Vcc = 2.7 to 5.5 V at Topr = 0 to 60 °C, unless otherwise specified.
- 2. Definition of programming/erasure endurance
 - The programming and erasure endurance is defined on a per-block basis.
 - If the programming and erasure endurance is n (n = 100 or 10,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one. However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
- 3. Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed).
- 4. If emergency processing is required, a suspend request can be generated independent of this characteristic. In that case the normal time delay to Suspend can be applied to the request. However, we recommend that a suspend request with an interval of less than 650 μs is only used once because, if the suspend state continues, erasure cannot operate and the incidence of erasure error rises.
- 5. In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. In addition, averaging the number of erase operations between block A and block B can further reduce the effective number of rewrites. It is also advisable to retain data on the erase count of each block and limit the number of erase operations to a certain number.
- 6. If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
- Customers desiring programming/erasure failure rate information should contact their Renesas technical support representative.
- 8. The data hold time includes time that the power supply is off or the clock is not supplied.

- 9. The data hold time includes time that the power supply is off or the clock is not supplied.

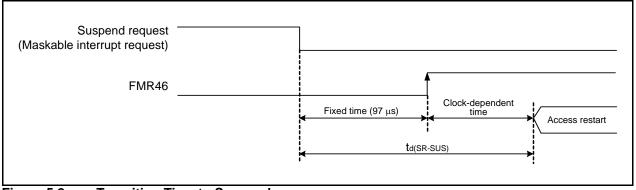

Figure 5.2 Transition Time to Suspend

Table 5.6 **Voltage Detection 1 Circuit Electrical Characteristics**

Symbol	Parameter	Condition		Unit		
Symbol	Farameter	Condition	Min.	Тур.	Max.	Offic
Vdet1	Voltage detection level ⁽³⁾		2.70	2.85	3.00	V
_	Voltage detection circuit self power consumption	VCA26 = 1, Vcc = 5.0 V	-	600	-	nA
td(E-A)	Waiting time until voltage detection circuit operation starts ⁽²⁾		=	=	100	μS
Vccmin	MCU operating voltage minimum value		2.7	-	-	V

- 1. The measurement condition is Vcc = 2.7 V to 5.5 V and T_{opr} = -40°C to 85 °C.
- 2. Necessary time until the voltage detection circuit operates when setting to 1 again after setting the VCA26 bit in the VCA2 register to 0.
- 3. Ensure that Vdet2 > Vdet1.

Table 5.7 **Voltage Detection 2 Circuit Electrical Characteristics**

Symbol	Parameter	Condition		Unit		
Symbol	Farameter	Condition	Min.	Тур.	Max.	Offic
Vdet2	Voltage detection level ⁽⁴⁾		3.00	3.30	3.60	V
_	Voltage monitor 2 interrupt request generation time ⁽²⁾		_	40	_	μS
-	Voltage detection circuit self power consumption	VCA27 = 1, Vcc = 5.0 V	-	600	-	nA
td(E-A)	Waiting time until voltage detection circuit operation starts ⁽³⁾		=	=	100	μS

- The measurement condition is Vcc = 2.7 V to 5.5 V and Topr = -40°C to 85 °C.
 Time until the voltage monitor 2 interrupt request is generated after the voltage passes Vdet1.
- 3. Necessary time until the voltage detection circuit operates when setting to 1 again after setting the VCA27 bit in the VCA2 register to 0.
- 4. Ensure that Vdet2 > Vdet1.

Table 5.8 Reset Circuit Electrical Characteristics (When Using Voltage Monitor 1 Reset)

Symbol	Parameter	Condition	;	Standard		Unit
			Min.	Тур.	Max.	
Vpor2	Power-on reset valid voltage	$-20^{\circ}C \le Topr \le 85^{\circ}C$	=	=	Vdet1	V
tw(Vpor2-Vdet1)	Supply voltage rising time when power-on reset is	$-20^{\circ}C \leq Topr \leq 85^{\circ}C$,	_	_	100	ms
	deasserted ⁽¹⁾	$tw(por2) \ge 0s(3)$				

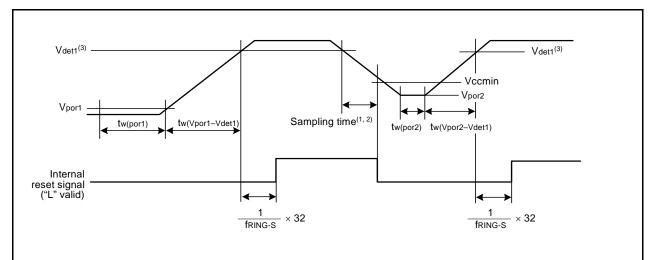

- 1. This condition is not applicable when using with $Vcc \ge 1.0 \text{ V}$.
- 2. When turning power on after the time to hold the external power below effective voltage (Vpor1) exceeds10 s, refer to Table 5.9 Reset Circuit Electrical Characteristics (When Not Using Voltage Monitor 1 Reset).
- 3. tw(por2) is the time to hold the external power below effective voltage (Vpor2).

Table 5.9 Reset Circuit Electrical Characteristics (When Not Using Voltage Monitor 1 Reset)

Symbol	Parameter	Condition		Standar	d	Unit
			Min.	Тур.	Max.	
Vpor1	Power-on reset valid voltage	-20°C ≤ Topr ≤ 85°C	_	=	0.1	V
tw(Vpor1-Vdet1)	Supply voltage rising time when power-on reset is deasserted	$0^{\circ}C \leq Topr \leq 85^{\circ}C,$ $tw(por1) \geq 10 s^{(2)}$	-	=	100	ms
tw(Vpor1-Vdet1)	Supply voltage rising time when power-on reset is deasserted	$ -20^{\circ}C \leq Topr < 0^{\circ}C, \\ tw(por1) \geq 30 \ s^{(2)} $	-	=	100	ms
tw(Vpor1-Vdet1)	Supply voltage rising time when power-on reset is deasserted	$ -20^{\circ}C \leq Topr < 0^{\circ}C, $ $ tw(por1) \geq 10 \ s^{(2)} $	=	=	1	ms
tw(Vpor1-Vdet1)	Supply voltage rising time when power-on reset is deasserted	$0^{\circ}C \le Topr \le 85^{\circ}C,$ $tw(por1) \ge 1 s^{(2)}$	-	=	0.5	ms

NOTES:

- 1. When not using voltage monitor 1, use with $Vcc \ge 2.7 \text{ V}$.
- 2. tw(por1) is the time to hold the external power below effective voltage (Vpor1).

- 1. Hold the voltage inside the MCU operation voltage range (Vccmin or above) within the sampling time.
- The sampling clock can be selected. Refer to 7. Voltage Detection Circuit for details.
 V_{det1} indicates the voltage detection level of the voltage detection 1 circuit. Refer to 7. Voltage Detection Circuit for details.

Figure 5.3 **Reset Circuit Electrical Characteristics**

Table 5.10 High-speed On-Chip Oscillator Circuit Electrical Characteristics

Symbol	Parameter	Condition	,	Unit		
Symbol	Parameter	Condition	Standard Min. Typ. Max. - 8 - 7.76 - 8.24 7.68 - 8.32	Offit		
_	High-speed on-chip oscillator frequency when the reset is deasserted	VCC = 5.0 V, Topr = 25 °C	I	8	-	MHz
_	High-speed on-chip oscillator frequency temperature	0 to +60 °C/5 V ± 5 % ⁽³⁾	7.76	-	8.24	MHz
	supply voltage dependence ⁽²⁾	-20 to +85 °C/2.7 to 5.5 V ⁽³⁾	7.68	-	8.32	MHz
		-40 to +85 °C/2.7 to 5.5 V ⁽³⁾	7.44	_	8.32	MHz

- 1. The measurement condition is Vcc = 5.0 V and $T_{opr} = 25 \,^{\circ}\text{C}$.
- 2. Refer to 10.6.4 High-Speed On-Chip Oscillator Clock for notes on high-speed on-chip oscillator clock.
- 3. The standard value shows when the HRA1 register is assumed as the value in shipping and the HRA2 register value is set to 00h.

Table 5.11 Power Supply Circuit Timing Characteristics

Symbol	Parameter	Condition	Standard			Unit
Symbol	Falametei	Condition	Min.	Тур.	Max.	Offic
td(P-R)	Time for internal power supply stabilization during power-on ⁽²⁾		1	=	2000	μS
td(R-S)	STOP exit time ⁽³⁾		=	_	150	μS

- 1. The measurement condition is Vcc = 2.7 to 5.5 V and $T_{opr} = 25$ °C.
- 2. Waiting time until the internal power supply generation circuit stabilizes during power-on.
- 3. Time until CPU clock supply starts after the interrupt is acknowledged to exit stop mode.

Table 5.12 Electrical Characteristics (1) [Vcc = 5 V]

Symbol	Doros	motor	Cons	dition	St	tandard		Unit
Symbol	Parai	neter	Cond	ווטווג	Min.	Тур.	Max.	Unit
Vон	Output "H" voltage	Except Xout	Iон = -5 mA	Iон = -5 mA		1	Vcc	V
			Ioн = -200 μA		Vcc - 0.3	-	Vcc	V
		Хоит	Drive capacity HIGH	Iон = -1 mA	Vcc - 2.0	=	Vcc	V
			Drive capacity LOW	Ιοн = -500 μΑ	Vcc - 2.0	=	Vcc	V
Vol	Output "L" voltage	Except P1_0 to	IoL = 5 mA	-	_	1	2.0	V
		P1_3, Xout	IoL = 200 μA		_	1	0.45	V
		P1_0 to P1_3	Drive capacity HIGH	IOL = 15 mA	=	=	2.0	V
			Drive capacity LOW	IOL = 5 mA	=	_	2.0	V
			Drive capacity LOW	IOL = 200 μA	-	_	0.45	V
		Хоит	Drive capacity HIGH	IOL = 1 mA	=	=	2.0	V
			Drive capacity LOW	IOL = 500 μA	=	=	2.0	V
VT+-VT-	Hysteresis	INTO, INT1, INT2, INT3, KIO, KI1, KI2, KI3, CNTRO, CNTR1, TCIN, RXD0			0.2	-	1.0	V
		RESET			0.2	_	2.2	V
Іін	Input "H" current	1	VI = 5 V		_	_	5.0	μА
lı∟	Input "L" current		VI = 0 V		-	1	-5.0	μΑ
RPULLUP	Pull-up resistance		VI = 0 V		30	50	167	kΩ
RfXIN	Feedback resistance	XIN			-	1.0	-	МΩ
fring-s	Low-speed on-chip or	scillator frequency			40	125	250	kHz
VRAM	RAM hold voltage		During stop mode		2.0	_	_	V

^{1.} VCC = 4.2 to 5.5 V at Topr = -20 to 85 °C / -40 to 85 °C, f(XIN) = 20 MHz, unless otherwise specified.

Electrical Characteristics (2) [Vcc = 5 V] (Topr = -40 to 85 $^{\circ}$ C, unless otherwise specified.) **Table 5.13**

Symbol	Parameter		Condition		Standard		Unit
Cymbol	1 didiliotoi		Condition	Min.	Тур.	Max.	01110
Icc	Power supply current (Vcc = 3.3 to 5.5 V) Single-chip mode, output pins are open,	High-speed mode	XIN = 20 MHz (square wave) High-speed on-chip oscillator off Low-speed on-chip oscillator on = 125 kHz No division	I	9	15	mA
	other pins are Vss, comparator is stopped		XIN = 16 MHz (square wave) High-speed on-chip oscillator off Low-speed on-chip oscillator on = 125 kHz No division	=	8	14	mA
			XIN = 10 MHz (square wave) High-speed on-chip oscillator off Low-speed on-chip oscillator on = 125 kHz No division	-	5	-	mA
		Medium- speed mode	XIN = 20 MHz (square wave) High-speed on-chip oscillator off Low-speed on-chip oscillator on = 125 kHz Divide-by-8	Ĺ	4	_	mA
	on-chip		XIN = 16 MHz (square wave) High-speed on-chip oscillator off Low-speed on-chip oscillator on = 125 kHz Divide-by-8	_	3	=	mA

Renesas Technology Corp. sales Strategic Planning Div. Nippon Bldg., 2-6-2, Ohte-machi, Chiyoda-ku, Tokyo 100-0004, Japan

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal rijury, fire or property damage.

Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

- Notes regarding these materials

 1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.

 2. Renesas Technology Corp. assumes no responsibility for any damage, or infingement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.

 3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.

 The information described here may contain technical inaccuracies or typographical errors.

 Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.

 Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (http://www.renesas.com).

 4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.

 5. Renesas Technology Corp. semiconductors are not designed

- use.

 6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.

 7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.

 Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.

 8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
