## Video signal switcher BA7613N / BA7613F

The BA7613N and BA7613F are three-channel analog multiplexers with built-in mute, 6 dB amplifier and $75 \Omega$ driver. The ICs designed for use in video cassette recorders, and feature a large dynamic range and wide operating frequency range. Sync-tip clamp inputs make this an ideal switch for video signals.

## - Applications

Video cassette recorders and televisions

## - Features

1) 3-input / 1-output switches.
2) Built-in 6 dB amplifier and $75 \Omega$ driver.
3) Built-in mute.
4) Low power consumption ( 100 mW Typ.).
5) Sync-tip clamp inputs.
6) Excellent frequency characteristics ( 10 MHz , OdB Typ.).
7) Wide operating supply voltage range
(4.5V ~ 13.0V, BA7613N) (4.5V ~ 9.5V, BA7613F).
8) Wide dynamic range (3.5Vp-p Typ.).
9) Low interchannel crosstalk
( -65 dB Typ., $\mathrm{f}=4.43 \mathrm{MHz}$ ).

*1: Connect a distortion meter to the output, and input a $f=1 \mathrm{kHz}$ sine wave. Adjust the input level until the output distortion is $0.5 \%$. This output voltage at this time multiplied by 2 is the maximum output level Vom (VP-P).
*2: Input a $1 \mathrm{VP}-\mathrm{P}, 1 \mathrm{MHz}$ sine wave. The voltage gain is given by $\mathrm{Gv}=20 \log (\mathrm{Vout} / \mathrm{VIN})+6$.
*3: Input a $1 \mathrm{VP}-\mathrm{P}, 4.43 \mathrm{MHz}$ sine wave. The interchannel crosstalk is given by $\mathrm{CT}=20 \log$ (VOUT / VIN).
*4: Input $1 \mathrm{VP}-\mathrm{P}, 1 \mathrm{MHz}$ and 10 MHz sine waves.
The frequency characteristic is given by $\mathrm{Gf}_{\mathrm{f}}=20 \log (\operatorname{VOUT}(f=10 \mathrm{MHz}) / \operatorname{Vout}(f=1 \mathrm{MHz}))$.
*5: Input a 1VP-P, 1 MHz sine wave. Reduce the CTL pin voltage from Vcc.
The CTL pin switching level $(\mathrm{VTH})$ is the CTL pin voltage at which the Vout level drops below 20mVp-p.

Fig. 4 Interchannel crosstalk

## Operation notes

The output impedance is approximately $32 \Omega$. Therefore, to ensure output matching, connect an external resistor of $43 \Omega$.
