## Sound Processor with Built-in 3-band Equalizer BD37531FV

## General Description

BD37531FV is a sound processor with built-in 3-band equalizer for car audio. A stereo input selector is available that functions to switch single end input and ground isolation input, input-gain control, main volume, loudness and 5ch fader volume. Moreover, "Advanced switch circuit", which is an original ROHM technology, can reduce various switching noise (ex. No-signal, low frequency like 20 Hz \& large signal inputs). Also, "Advanced switch" makes microcomputer control easier and constructs a high quality car audio system.

## Features

- Reduced switching noise of input gain control, mute, main volume, fader volume, bass, middle, treble, loudness by using advanced switch circuit
- Built-in differential input selector that can make various combination of single-ended / differential input.
- Built-in ground isolation amplifier inputs, which is ideal for external stereo input.
- Built-in input gain controller reduces volume switching noise of a portable audio input.
- Decreased number of external components due to built-in 3-band equalizer filter and loudness filter. It is possible to freely control the $\mathrm{Q}, \mathrm{Gv}$, fo of the 3-band equalizer, and Gv of the loudness through the $I^{2} \mathrm{C}$ BUS control
- A gain adjustment quantity of $\pm 20 \mathrm{~dB}$ with a 1 dB step gain adjustment is possible for the bass, middle and treble.
- Equipped with terminals for the subwoofer outputs. Also, the audio signal outputs of the front, rear and subwoofer can be chosen using the $I^{2} \mathrm{C}$ BUS control.
- Energy-saving design resulting in low current consumption is achieved utilizing the BiCMOS process. It has the advantage in quality over scaling down the power heat control of the internal regulators.
- Input pins and output pins are organized and separately laid out to keep the signal flow in one direction which consequently, simplify pattern layout of the set board and decrease the board dimensions.
- It is possible to control $I^{2} \mathrm{C}$ BUS with $3.3 \mathrm{~V} / 5 \mathrm{~V}$.

## Key Specifications

- Power Supply Voltage Range:
- Circuit Current (No signal) :
- Total Harmonic Distortion 1: (FRONT,REAR)
7.0 V to 9.5 V $38 \mathrm{~mA}(\mathrm{Typ})$
- Total Harmonic Distortion 2 . (SUBWOOFER)
- Maximum Input voltage: 0.002\%(Typ)
- Cross-talk Between Selectors:
- Volume Control Range: -100 dB (Typ)

Output Noise Voltage 1
(FRONT,REAR)

- Output Noise Voltage 2:
(SUBWOOFER)
- Residual Output Noise Voltage:
. $\mu \mathrm{V}$ rms(Typ)
$1.8 \mu \mathrm{Vrms}(\mathrm{Typ})$
- Operating Temperature Range: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$

Package
W(Typ) x D(Typ) x H(Max)

## Applications

It is optimal for car audio systems. It can also be used for audio equipment of mini Compo, micro Compo, TV, etc.

## Typical Application Circuit

Pin Configuration

Absolute Maximum Ratings ( $\mathrm{Ta}=25^{\circ} \mathrm{C}$ )

| Parameter | Symbol | Rating | Unit |
| :--- | :---: | :---: | :---: |
| Power Supply Voltage | Vcc | 10.0 | V |
| Input Voltage | VIN | Vcc $^{\text {P }} 0.3$ to GND-0.3 | V |
| Power Dissipation | Pd | $1.06^{(\text {Note } 1)}$ | W |
| Storage Temperature | Tstg | $-55^{\text {to }+150}$ | ${ }^{\circ} \mathrm{C}$ |

(Note 1) When mounted on ROHM standard board $\left(70 \times 70 \times 1.6\left(\mathrm{~mm}^{3}\right)\right.$, derate by $8.5 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ for Ta above $25^{\circ} \mathrm{C}$.
Thermal resistance $\theta \mathrm{ja}=117.6\left({ }^{\circ} \mathrm{C} / \mathrm{W}\right)$
Material : A FR4 grass epoxy board(3\% or less of copper foil area)
Caution: Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the absolute maximum ratings.

## Recommended Operating Conditions

| Parameter | Symbol | Limit | Unit |
| :--- | :---: | :---: | :---: |
| Power Supply Voltage | Vcc | 7.0 to 9.5 | V |
| Temperature | Topr | -40 to +85 | ${ }^{\circ} \mathrm{C}$ |

Advanced switch

Note

1. The Advanced Switch works in the latch part while changing from one function to another.
2. Upon continuous data transfer, the Select Address rolls over because of the automatic increment function, as shown below.

3. Advanced switch is not used for functions of input selector and subwoofer output select etc. Therefore, please turn on MUTE when changing the settings of this side of a set
4. When using Mute function of this IC at the time of changing input selector, please switch mute ON/OFF while waiting for advanced-mute time.

Select address 01 (hex)

(6) About Power ON Reset

Built-in IC initialization is made during power ON of the supply voltage. Please send initial data to all addresses at supply voltage on. Also, please turn ON MUTE at the set side until initial data is sent.

| Parameter | Symbol | Limit |  |  | Unit | Conditions |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Min | Typ | Max |  |  |
| Rise Time of VCC | tRISE | 33 | - | - | $\mu \mathrm{sec}$ | Vcc rise time from 0V to 5V |
| VCC Voltage of Release <br> Power ON Reset | VPOR | - | 4.1 | - | V |  |

(7) About External Compulsory Mute Terminal

It is possible to forcibly set Mute from the outside by setting input voltage at the MUTE terminal.

| Mute Voltage Condition | Mode |
| :---: | :---: |
| GND to 1.0 V | MUTE ON |
| 2.3 V to Vcc | MUTE OFF |

Establish the voltage of MUTE in the condition to be defined.

## Application Information

1. Function and Specifications

| Function | Specifications |
| :---: | :---: |
| Input selector | - (Stereo input) <br> - Single-End/Diff/Full-Diff <br> (Possible to set the number of single-end/diff/full-diff as follows ) |
| Input gain | - +20dB to 0dB (1dB step) <br> - Possible to use "Advanced switch" for prevention of switching noise. |
| Mute | - Possible to use "Advanced switch" for prevention of switching noise. |
| Volume | - +15dB to -79 dB ( 1 dB step), $-\infty \mathrm{dB}$ <br> - Possible to use "Advanced switch" for prevention of switching noise. |
| Bass | - +20dB to -20 dB (1dB step) <br> - $\mathrm{Q}=0.5,1,1.5,2$ <br> - fo $=60,80,100,120 \mathrm{~Hz}$ <br> - Possible to use "Advanced switch" when changing gain |
| Middle | - +20dB to -20 dB (1dB step) <br> - $Q=0.75,1,1.25,1.5$ <br> - fo=500, 1k, 1.5k 2.5 kHz <br> - Possible to use "Advanced switch" when changing gain |
| Treble | - +20dB to -20 dB (1dB step) <br> - $\mathrm{Q}=0.75,1.25$ <br> - fo=7.5k, 10k, 12.5k, 15kHz <br> - Possible to use "Advanced switch" when changing gain |
| Fader | - 0 dB to $-79 \mathrm{~dB},-\infty \mathrm{dB}$ <br> - Possible to use "Advanced switch" for prevention of switching noise. |
| Loudness | - 20dB to 0 dB ( 1 dB step) <br> - $\mathrm{fo}=250 / 400 / 800 \mathrm{~Hz}$ <br> - Possible to use "Advanced switch" for prevention of switching noise. |

Fader Volume only 0 dB to $-\infty \mathrm{dB}$ are available.

## 3. Application Circuit

## Notes on wiring

Please connect the decoupling capacitor of the power supply in the shortest possible distance to GND
(2) GND lines should be one-point connected.
(3) Wiring pattern of Digital shall be away from that of analog unit and crosstalk should not be acceptable.
(4) If possible, SCL and SDA lines of the $I^{2} \mathrm{C}$ BUS should not be parallel.

The lines should be shielded, if they are adjacent to each other.
(5) If possible, analog input lines should not be parallel. The lines should be shielded, if they are adjacent to each other.
(6) About TEST pin(14,16,17pin), should be OPEN.

## Power Dissipation

About the thermal design of the IC
Characteristics of an IC are greatly affected by the temperature at which it is used. Exceeding absolute maximum ratings may degrade and destroy the device. Careful consideration must be given to the heat of the IC from the two standpoints of immediate damage and long-term reliability of operation.

Figure 23. Temperature Derating Curve
(Note) Values are actual measurements and are not guaranteed
Power dissipation values vary according to the board on which the IC is mounted.

## I/O Equivalent Circuits

| 28 | FIL | 4.25 |  | Voltage for reference bias of analog signal system. The simple pre-charge circuit and simple discharge circuit for an external capacitor are built in. |
| $\begin{aligned} & 14 \\ & 16 \\ & 17 \end{aligned}$ | TEST | - |  | TEST terminal |

[^1]
## Operational Notes

1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.
2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.
3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.
4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

## 5. Thermal Consideration

Should by any chance the power dissipation rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. In case of exceeding this absolute maximum rating, increase the board size and copper area to prevent exceeding the Pd rating.

## 6. Recommended Operating Conditions

These conditions represent a range within which the expected characteristics of the IC can be approximately obtained. The electrical characteristics are guaranteed under the conditions of each parameter.
7. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.
8. Operation Under Strong Electromagnetic Field

Operating the IC in the presence of a strong electromagnetic field may cause the IC to malfunction.
9. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.
10. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

## 11. Unused Input Pins

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

## Operational Notes - continued

## 12. Regarding the Input Pin of the IC

This monolithic IC contains $\mathrm{P}+$ isolation and P substrate layers between adjacent elements in order to keep them isolated. $\mathrm{P}-\mathrm{N}$ junctions are formed at the intersection of the P layers with the N layers of other elements, creating a parasitic diode or transistor. For example (refer to figure below):

When GND > Pin A and GND > Pin B, the P-N junction operates as a parasitic diode.
When GND > Pin B, the P-N junction operates as a parasitic transistor.
Parasitic diodes inevitably occur in the structure of the IC. The operation of parasitic diodes can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions that cause these diodes to operate, such as applying a voltage lower than the GND voltage to an input pin (and thus to the $P$ substrate) should be avoided.

Figure 24. Example of monolithic IC structure
13. About a Signal Input Part
(a) About Input Coupling Capacitor Constant Value The constant value of input coupling capacitor $C(F)$ is decided with respect to the input impedance $\operatorname{Rin}(\Omega)$ at the input signal terminal of the IC that would be sufficient to form an RC characterized HPF.

(b) About the Input Selector SHORT

SHORT mode is the command which makes switch $\mathrm{S}_{\mathrm{SH}}=\mathrm{ON}$ of input selector part so that the input impedance Rin of all terminals becomes small. Switch Ssh is OFF when SHORT command is not selected.
The constant time brought about by the small resistance inside and the capacitor outside the LSI becomes small when this command is used. The charge time of the capacitor becomes short. Since SHORT mode turns ON the switch of $\mathrm{S}_{\mathrm{sH}}$ and makes it low impedance, please use it at no signal condition.
14. About Mute Terminal (Pin 15) when Power Supply is OFF

There should be no applied voltage to Mute terminal (Pin 15) when power-supply is OFF.
If in case voltage is supplied to Mute terminal, please insert a series resistor (about $2.2 \mathrm{k} \Omega$ ) to Mute terminal. (Please refer to Application Circuit Diagram.)
15. About TEST Pin

TEST Pin should be OPEN.
Pin 14. 16, 17 are TEST Pins

## Notice

## Precaution on using ROHM Products

1. Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment ${ }^{\text {(Note 1), }}$, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.
(Note1) Medical Equipment Classification of the Specific Applications

| JAPAN | USA | EU | CHINA |
| :---: | :---: | :---: | :---: |
| CLASSIII | CLASSIII | CLASS II b | CLASSIII |
|  |  | CLASSIII |  |

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
[a] Installation of protection circuits or other protective devices to improve system safety
[b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
3. Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
[a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
[b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
[c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl , $\mathrm{H}_{2} \mathrm{~S}, \mathrm{NH}_{3}, \mathrm{SO}$, and $\mathrm{NO}_{2}$
[d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
[e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
[f] Sealing or coating our Products with resin or other coating materials
[g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
[h] Use of the Products in places subject to dew condensation
4. The Products are not subject to radiation-proof design.
5. Please verify and confirm characteristics of the final or mounted products in using the Products.
6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
8. Confirm that operation temperature is within the specified range described in the product specification.
9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

## Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

## Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of lonizer, friction prevention and temperature / humidity control).

## Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
[a] the Products are exposed to sea winds or corrosive gases, including $\mathrm{Cl} 2, \mathrm{H} 2 \mathrm{~S}, \mathrm{NH} 3, \mathrm{SO} 2$, and NO 2
[b] the temperature or humidity exceeds those recommended by ROHM
[c] the Products are exposed to direct sunshine or condensation
[d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

## Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

## Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

## Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

## Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

## Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

## General Precaution

1. Before you use our Products, you are requested to care fully read this document and fully understand its contents. ROHM shall not be in an y way responsible or liable for failure, malfunction or accident arising from the use of a ny ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this docume nt is current as of the issuing date and subj ect to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the la test information with a ROHM sale s representative.
3. The information contained in this doc ument is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate an d/or error-free. ROHM shall not be in an y way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
