

System Lens Drivers

# μ-step System Lens Driver for Digital Still Cameras

**BU24038GW**

**General Description**

BU24038GW is a system Lens Driver which is capable of μ-step driving and possible to configure a high precision and low noise lens driver system. This device performs μ-step driving control internally and can reduce a load of CPU. This device also has drivers for DC motor and voice coil motor, and is utilizable for multifunctional lens.

**Features**

- Built-in 9 Channel Drivers  
1ch to 8ch: Voltage Control Type H-Bridge (for 3 STM Systems)  
9ch: Current Control Type H-Bridge
- Built-in 3 Channel PI Driver Circuits
- Built-in 4 Channel Waveform Shaping Circuits
- Built-in PLL Circuit

**Applications**

- Digital Still Camera

**Key Specifications**

- Digital Power Supply Voltage: 2.7 V to 3.6 V
- Driver Power Supply Voltage: 2.7 V to 5.5 V
- Input/Output Current (1ch to 9ch): 500 mA (Max)
- Clock Operating Frequency: 1 MHz to 28 MHz
- ON-Resistance (1ch to 8ch): 1.5 Ω (Typ)
- ON-Resistance (9ch): 1.0 Ω (Typ)
- Operating Temperature Range: -20 °C to +85 °C

**Package**

UCSP75M3 (56 pin)      **W (Typ) x D (Typ) x H (Max)**  
3.80 mm x 3.80 mm x 0.85 mm

**Typical Application Circuit**

○Product structure : Silicon integrated circuit    ○This product has no designed protection against radioactive rays

D1	OUT9A	RNF9	9ch driver A output	J4	MGND567	-	5ch, 6ch, 7ch driver ground
D2	SDATA	DVDD	SDATA logic input	J5	OUT7A	MVCC567	7ch driver A output
D8	SI4	DVDD	Waveform shaping input4	J6	OUT5B	MVCC567	5ch driver B output
D9	OUT2A	MVCC12	2ch driver A output	J7	OUT5A	MVCC567	5ch driver A output
E1	MGND9	-	9ch driver ground	J8	MVCC567	-	5ch, 6ch, 7ch driver power supply
E2	CSB	DVDD	CSB logic input	J9	TEST	DVDD	TEST logic input

(Note 1) It is not possible to use corner pin only. (Corner pins are A1, A9, and J1)  
Short between the pins A1 to B2, A9 to B8 and J1 to H2, or use only the B2, B8 and H2 pins.

Block Diagram

**Description of Blocks**

Stepping Motor Driver (1ch to 6ch Driver)

- Built-in PWM type stepping motor drivers.
- Maximum 3 stepping motors can be driven independently.
- Built-in D-class type voltage feedback circuit.
- 3ch/4ch drivers can also drive DC motor or voice coil motor individually.

(1) Control

Both Clock IN and Autonomous control are possible.

(a)Clock IN Control

Set the registers for the stepping motor control.

Stepping motor rotates in synchronization with clock input to the STATE1, STATE2 and/or STATE3 pin.

Mode of stepping motor control is selectable from  $\mu$ -step, 1-2 phase excitation and 2 phase excitation. And the number of edge for electrical angle cycle is selectable from 4, 8, 32, 64, 128, 256, 512 or 1024.

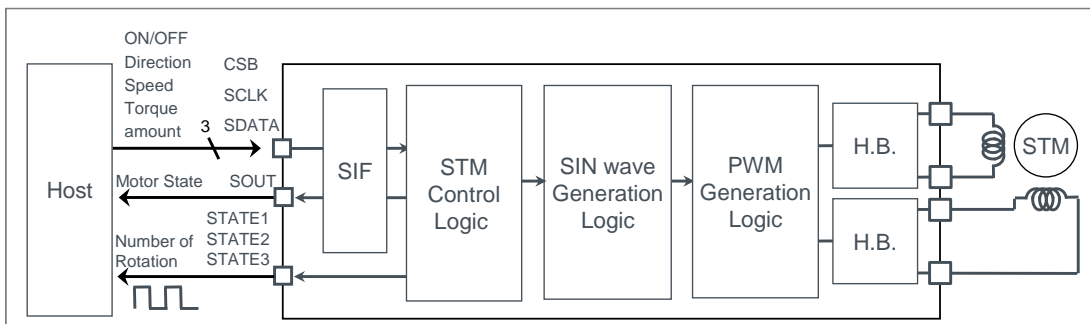

(b)Autonomous Control

Stepping motor rotates by setting the registers to drive the stepping motor.

It is possible to output from serial output (the SOUT pin) the status information which are operation command status (execution:1, stop:0), cache register status and motor position, and to output signal (MO output) from the STATE1, STATE2 and STATE3 pin in synchronization with motor operation.

Mode of stepping motor control is selectable from  $\mu$ -step (1024 portion), 1-2 phase excitation and 2 phase excitation. Built-in Cache register enables to set next operation commands during motor operation, and continuous operation is possible.

**Description of Blocks – continued**

Voltage Driver (7ch, 8ch Driver)

Built-in PWM type voltage driver.

(1) Control

(a) Register Control

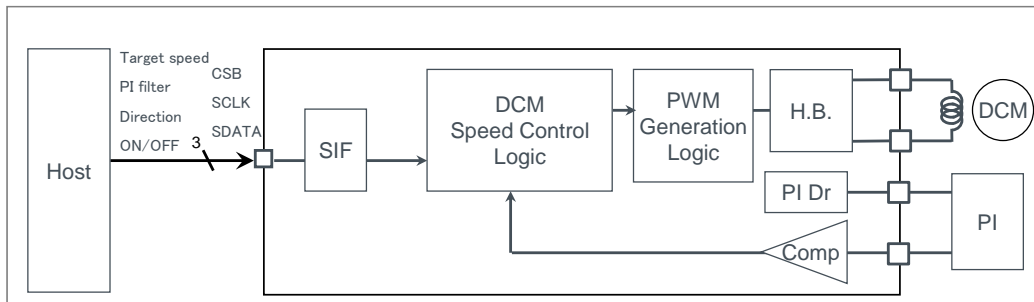

■7ch, 8ch driver speed control = OFF

PWM driving by setting the registers for PWM duty ratio, direction and ON/OFF.

■8ch driver speed control = ON

Speed control driving by setting the registers for target speed value, PI filter value, direction and ON/OFF. Motor speed is detected from photo-interrupter signal and rotation speed is adjusted by comparing the target speed with the motor speed.

**Description of Blocks – continued**

Current Driver (9ch Driver)

Built-in constant current driver.

A voltage at the RNF9 pin and an external resistor ( $R_{RNF}$ ) value determine output current value. An internal high-precision amplifier (CMOS gate input) controls constant current. If any resistance component exists in wirings for the RNF9 pin and the external resistor ( $R_{RNF}$ ), that might reduce accuracy and pay attention about wiring.

(1) Control

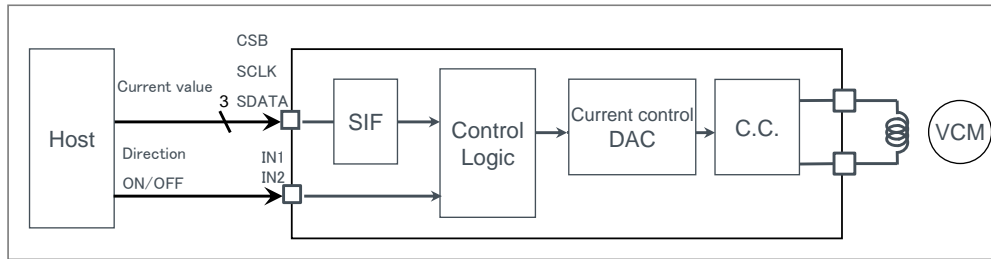

(a) Register Control

Constant current driving by setting the registers for output current value, direction and ON/OFF.

(b) External Pin Control 1

Constant current driving by setting the registers for output current value, and the IN1 and IN2 pin for direction and ON/OFF.

(b) External Pin Control 2

Constant current driving by setting the registers for output current value and direction, and the IN1 pin for ON/OFF.

## Absolute Maximum Ratings (Ta=25 °C)

Parameter	Symbol	Rating	Unit	Remark
Supply Voltage	DVDD	-0.3 to +4.5	V	
	MVCC	-0.3 to +7.0	V	MVCC12, MVCC34, MVCC567, MVCC8, VDDAMP
Input Voltage	V <sub>IN</sub>	-0.3 to supply voltage+0.3	V	
Input / Output Current (Note 2)	I <sub>IN</sub>	500	mA	MVCC12, MVCC34, MVCC567, MVCC8, RNF9
		50	mA	PIOUT1, PIOUT2, PIOUT3
Maximum Junction Temperature	T <sub>jmax</sub>	125	°C	
Storage Temperature Range	T <sub>stg</sub>	-55 to +125	°C	
Power Dissipation (Note 3)	P <sub>d</sub>	1.30	W	

**Caution 1:** Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the absolute maximum ratings.

**Caution 2:** Should by any chance the maximum junction temperature rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. In case of exceeding this absolute maximum rating, design a PCB with power dissipation taken into consideration by increasing board size and copper area so as not to exceed the maximum junction temperature rating.

(Note 2): Must not exceed P<sub>d</sub>.

(Note 3): When use at Ta=25 °C or more, derate 13 mW per 1 °C

(At mounting 50 mm x 58 mm x 1.75 mm glass epoxy board.)

## Recommended Operating Conditions

Parameter	Symbol	Min	Typ	Max	Unit	Remark
Digital Power Supply Voltage	DVDD	2.7	3.0	3.6	V	DVDD ≤ MVCC
Driver Power Supply Voltage	MVCC	2.7	5.0	5.5	V	MVCC12, MVCC34, MVCC567, MVCC8, VDDAMP
Clock Operating Frequency	f <sub>FCLK</sub>	1	-	28	MHz	Reference clock
Operating Temperature	T <sub>opr</sub>	-20	+25	+85	°C

**Timing Chart**

(Unless otherwise specified, Ta=25 °C, DVDD=3.0 V)

Parameter	Symbol	Design Value
SCLK Input Cycle	$t_{SCLK}$	100 ns or more
SCLK Low-Level Input Time	$t_{SCLKL}$	50 ns or more
SCLK High-Level Input Time	$t_{SCLKH}$	50 ns or more
SDATA Setup Time	$t_{SSDATA}$	50 ns or more
SDATA Hold Time	$t_{HSDATA}$	50 ns or more
CSB High-Level Input Time	$t_{CSBH}$	380 ns or more
CSB Setup Time	$t_{SCSB}$	50 ns or more
CSB Hold Time	$t_{HCSB}$	50 ns or more
RESETB Low-Level Input Time	$t_{RESETBL}$	350 ns or more
FCLK Input Cycle	$t_{FCLK}$	36 ns or more
FCLK Low-Level Input Time	$t_{FCLKL}$	18 ns or more
FCLK High-Level Input Time	$t_{FCLKH}$	18 ns or more

(Note 4) RESETB and FCLK is asynchronous with SCLK.  
 (Note 5) The duty of FCLK and SCLK is arbitrary after observing the above table.

**Serial interface**

Control command is 16-bit serial input (MSB first) and is sent via the CSB, the SCLK, and the SDATA pins. Higher 4 bits specify addresses and lower 12 bits specify data. Data of each bit is sent via the SDATA pin and taken at a rising edge of SCLK. The Data taken during CSB 'L' period is valid and is written in register at a rising edge of CSB. SOUT output is 12bit data and synchronous with a falling edge of SCLK.

				1	1	0	0	0	0	0	0	STB	0	0	STM_RS	CMD_RS
Other than the above				Setting Prohibited												

(Note 6) The notations A, B and C in the register map correspond to Ach, Bch and Cch respectively. Ach is defined as 1ch and 2ch driver output, Bch as 3ch and 4ch, Cch as 5ch and 6ch driver output.

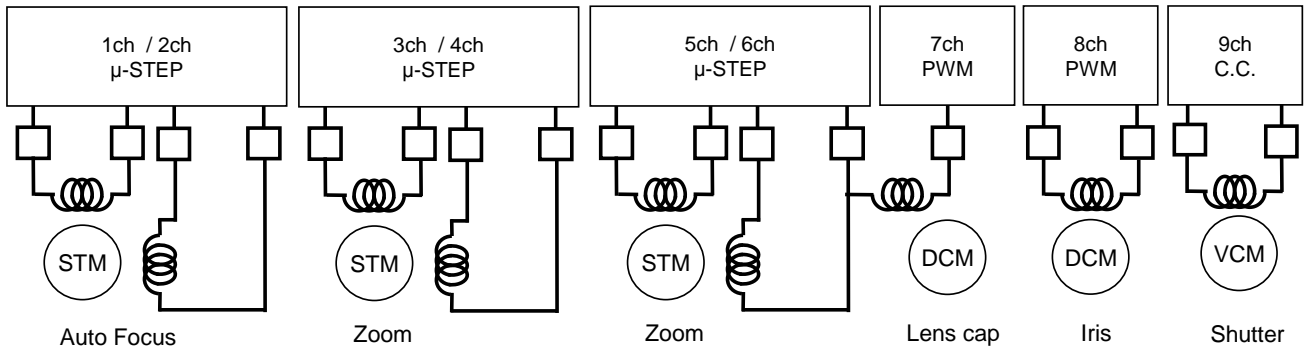

(Note 7) After reset, the initial settings are stored in all registers.

(Note 8) The data at register address 4'b0011 and 4'b0111 (ACT, BUSY, POSITION[9:6]) is internal register value and is output from the SOUT pin. 'L' in the above table indicates Low output.

(Note 9) Regarding Mode, different\_output\_voltage, Cycle, EN, and RT registers, the data written right before the access to the Pulse register is valid and determined at a rising edge of CSB after the access to the Pulse register. (The Mode, different\_output\_voltage, Cycle, EN, RT, and Pulse registers have Cache registers. Any registers other than them do not have Cache registers.)

Application Example

## Operational Notes

### 1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

### 2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

### 3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

### 4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

### 5. Recommended Operating Conditions

The function and operation of the IC are guaranteed within the range specified by the recommended operating conditions. The characteristic values are guaranteed only under the conditions of each item specified by the electrical characteristics.

### 6. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

### 7. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

### 8. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

### 9. Unused Input Pins

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

**Operational Notes – continued****10. Regarding the Input Pin of the IC**

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

**11. Ceramic Capacitor**

When using a ceramic capacitor, determine a capacitance value considering the change of capacitance with temperature and the decrease in nominal capacitance due to DC bias and others.

**12. Thermal Shutdown Circuit (TSD)**

This IC has a built-in thermal shutdown circuit that prevents heat damage to the IC. Normal operation should always be within the IC's maximum junction temperature rating. If however the rating is exceeded for a continued period, the junction temperature ( $T_j$ ) will rise which will activate the TSD circuit that will turn OFF power output pins. When the  $T_j$  falls below the TSD threshold, the circuits are automatically restored to normal operation.

Note that the TSD circuit operates in a situation that exceeds the absolute maximum ratings and therefore, under no circumstances, should the TSD circuit be used in a set design or for any purpose other than protecting the IC from heat damage.

**13. Disturbance Light**

In a device where a portion of silicon is exposed to light such as in a WL-CSP and chip products, IC characteristics may be affected due to photoelectric effect. For this reason, it is recommended to come up with countermeasures that will prevent the chip from being exposed to light.

## Revision History

Date	Revision	Changes
14.May.2010	001	New Release
18.Apr.2013	002	Update some English words, sentences, descriptions, grammar and format.
12.Mar.2019	003	In the "Typical Application Circuit" names of connected power supply are added. In the "Absolute Maximum Ratings" the "Maximum Junction Temperature" is added. In the "Absolute Maximum Ratings" notes are added. e.g. About when operating the IC over the "Absolute Maximum Ratings", "Operating Temperature" is moved to "Recommended Operating Conditions" from "Absolute Maximum Ratings". In the "Typical Performance Curves" package power dissipation graph is removed, because it's same information as Note 2 in "Absolute Maximum Ratings". "Operational Notes" are updated. Other formats are updated.

# Notice

## Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipment (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment <sup>(Note 1)</sup>, transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASS III	CLASS III	CLASS II b	CLASS III
CLASS IV		CLASS III	

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - Installation of protection circuits or other protective devices to improve system safety
  - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
  - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - Sealing or coating our Products with resin or other coating materials
  - Use of our Products without cleaning residue of flux (Exclude cases where no-clean type fluxes is used. However, recommend sufficiently about the residue.) ; or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse, is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

### Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

### Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

### Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

### Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

### Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

### Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

### Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

### Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

**General Precaution**

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
