## LCD Segment Drivers

## Multi-function LCD Segment Drivers

BU91510KV-M

## MAX 216 Segment(54SEG x 4COM)

## General Description

The BU91510KV-M is $1 / 4$ or $1 / 3$ Duty General-purpose LCD driver that can be used for frequency display in electronic tuners under the control of a microcontroller. The BU91510KV-M can drive up to 216 LCD Segments directly. The BU91510KV-M can also control up to 6 General-purpose output pins / 6 PWM output pins.

## Features

- AEC-Q100 Qualified (Note 1)
- Either $1 / 4$ or $1 / 3$ Duty can be selected with the Serial Control Data.

1/4 Duty Drive: up to 216 Segments
1/3 Duty Drive: up to 162 Segments

- Serial Data Control of Frame Frequency for Common and Segment Output Waveforms
- Serial Data Control of Switching between the Segment Output Pin, PWM Output Pin and General-purpose Output Pin Functions(Max 6 Pin)
- Built-in OSC Circuit
- The INHb Pin can Force the Display to the off State.
- Integrated Voltage Detect Type Power on Reset (VDET) circuit
- No External Component
- Low Power Consumption Design (Note 1) Grade 2

## Applications

- Car Audio, Home Electrical Appliance, Meter Equipment etc.

## Typical Application Circuit

(Note 2) Insert capacitors between VDD and VSS C $\geq 0.1 \mu \mathrm{~F}$
Figure 1. Typical Application Circuit

## Block Diagram

Figure 2. Block Diagram

Pin Arrangement

Figure 3. Pin Configuration (TOP VIEW)

Absolute Maximum Ratings (VSS $=0.0 \mathrm{~V}$ )

| Parameter | Symbol | Conditions | Ratings | Unit |
| :---: | :---: | :---: | :---: | :---: |
| Maximum Supply Voltage | VDD | VDD | -0.3 to +7.0 | V |
| Input Voltage | VIN1 | SCE, SCL, SDI, INHb, OSC | -0.3 to +7.0 | V |
| Allowable Loss | Pd | - | $1.00{ }^{\text {(Note) }}$ | W |
| Operating Temperature | Topr | - | -40 to +105 | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature | Tstg | - | -55 to +125 | ${ }^{\circ} \mathrm{C}$ |

(Note) When use more than $\mathrm{Ta}=25^{\circ} \mathrm{C}$, subtract 10 mW per degree. (Using ROHM standard board)
(Board size: $70 \mathrm{~mm} \times 70 \mathrm{~mm} \times 1.6 \mathrm{~mm}$ material: FR4 board copper foil: land pattern only)
Caution1: Operating the IC over absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the absolute maximum ratings.
Caution2: Should by any chance the maximum junction temperature rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. In case of exceeding this absolute maximum rating, design a PCB boards with power dissipation taken into consideration by increasing board size and copper area so as not to exceed the maximum junction temperature rating.

Recommended Operating Conditions ( $\mathrm{Ta}=-40^{\circ} \mathrm{C}$ to $+105^{\circ} \mathrm{C}$, VSS $=0.0 \mathrm{~V}$ )

| Parameter | Symbol | Conditions | Ratings |  |  | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Min | Typ | Max |  |
| Supply Voltage | VDD | VDD | 2.7 | - | 6.0 | V |

## Electrical Characteristics $\left(\mathrm{Ta}=-40^{\circ} \mathrm{C}\right.$ to $+105^{\circ} \mathrm{C}, \mathrm{VDD}=2.7 \mathrm{~V}$ to $6.0 \mathrm{~V}, \mathrm{VSS}=0.0 \mathrm{~V}$ )

| Parameter | Symbol | Pin | Conditions | Limit |  |  | Unit |

Figure 10. 3-SPI Data Transfer Format

When it is coincident with device code, BU91510KV-M capture display data and control data at falling edge of SCE. So, please transfer the bit number of send display data and control data as specified number in the above figure. Specified number of bits is 80 bit (Device code: 8bit, Display data and Control data: 70bit, DD: 2bit).

## Control Data Functions

1. P0, P1 and P2: Segment / PWM / General-purpose output pin switching control data

These control bits are used to select the function of the S1/P1/G1 to S6/P6/G6 output pins (Segment Output Pins or PWM Output Pins or General-purpose Output Pins).
Please refer to the table below.

| P 0 | P 1 | P 2 | $\mathrm{~S} 1 / \mathrm{P} 1 / \mathrm{G} 1$ | $\mathrm{~S} 2 / \mathrm{P} 2 / \mathrm{G} 2$ | $\mathrm{~S} 3 / \mathrm{P} 3 / \mathrm{G} 3$ | $\mathrm{~S} 4 / \mathrm{P} 4 / \mathrm{G} 4$ | $\mathrm{~S} 5 / \mathrm{P} 5 / \mathrm{G} 5$ | $\mathrm{~S} 6 / \mathrm{P} 6 / \mathrm{G} 6$ | Reset <br> Condition |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | S 1 | S 2 | S 3 | S 4 | S 5 | S 6 | - |
| 0 | 0 | 1 | $\mathrm{P} 1 / \mathrm{G} 1$ | S 2 | S 3 | S 4 | S 5 | S 6 | - |
| 0 | 1 | 0 | $\mathrm{P} 1 / \mathrm{G} 1$ | $\mathrm{P} 2 / \mathrm{G} 2$ | S 3 | S 4 | S 5 | S 6 | - |
| 0 | 1 | 1 | $\mathrm{P} 1 / \mathrm{G} 1$ | $\mathrm{P} 2 / \mathrm{G} 2$ | $\mathrm{P} 3 / \mathrm{G} 3$ | S 4 | S 5 | S 6 | - |
| 1 | 0 | 0 | $\mathrm{P} 1 / \mathrm{G} 1$ | $\mathrm{P} 2 / \mathrm{G} 2$ | $\mathrm{P} 3 / \mathrm{G} 3$ | $\mathrm{P} 4 / \mathrm{G} 4$ | S 5 | S 6 | - |
| 1 | 0 | 1 | $\mathrm{P} 1 / \mathrm{G} 1$ | $\mathrm{P} 2 / \mathrm{G} 2$ | $\mathrm{P} 3 / \mathrm{G} 3$ | $\mathrm{P} 4 / \mathrm{G} 4$ | $\mathrm{P} 5 / \mathrm{G} 5$ | S 6 | - |
| 1 | 1 | 0 | $\mathrm{P} 1 / \mathrm{G} 1$ | $\mathrm{P} 2 / \mathrm{G} 2$ | $\mathrm{P} 3 / \mathrm{G} 3$ | $\mathrm{P} 4 / \mathrm{G} 4$ | $\mathrm{P} 5 / \mathrm{G} 5$ | $\mathrm{P} 6 / \mathrm{G} 6$ | - |
| 1 | 1 | 1 | S 1 | S 2 | S 3 | S 4 | S 5 | S 6 | - |

PWM output or General-purpose Output Pin is selected by PGx(x=1 to 6) control data bit.
When the General-purpose Output Pin Function is selected, the correspondence between the output pins and the respective Display Data is given in the table below.

| Output Pins | Corresponding Display Data |  |
| :---: | :---: | :---: |
|  | $1 / 4$ Duty Mode | $1 / 3$ Duty Mode |
| S1/P1/G1 | D1 | D1 |
| S2/P2/G2 | D5 | D4 |
| S3/P3/G3 | D9 | D7 |
| S4/P4/G4 | D13 | D10 |
| S5/P5/G5 | D17 | D13 |
| S6/P6/G6 | D21 | D16 |

When the General-purpose Output Pin Function is selected, the respective output pin outputs a "HIGH" level when its corresponding display data is set to " 1 ". Likewise, it will output a "LOW" level, if its corresponding display data is set to " 0 ". For example, S4/P4/G4 is used as a General-purpose Output Pin in case of $1 / 4$ Duty, if its corresponding Display Data - D13 is set to " 1 ", then S4/P4/G4 will output "HIGH" level. Likewise, if D13 is set to "0", then S4/P4/G4 will output "LOW" level.

## 2. DR: $1 / 3$ Bias drive or $1 / 2$ Bias drive switching control data

This control data bit selects either $1 / 3$ Bias drive or $1 / 2$ Bias drive.

| DR | Bias Drive Scheme | Reset Condition |
| :---: | :---: | :---: |
| 0 | $1 / 3$ Bias drive | 0 |
| 1 | $1 / 2$ Bias drive | - |

3. DT: $1 / 4$ Duty drive or $1 / 3$ Duty drive switching control data

This control data bit selects either 1/4 Duty drive or $1 / 3$ Duty drive.

| DT | Duty Drive Scheme | Reset Condition |
| :---: | :---: | :---: |
| 0 | $1 / 4$ Duty drive | 0 |
| 1 | $1 / 3$ Duty drive | - |

4. FC0, FC1 and FC2: Frame frequency switching control data

These control data bits set the frame frequency for common and segment output waveforms.

| FC0 | FC1 | FC2 | Frame Frequency fo(Hz) | Reset Condition |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | fosc/6144 | 0 |
| 0 | 0 | 1 | fosc/5376 | - |
| 0 | 1 | 0 | fosc/4608 | - |
| 0 | 1 | 1 | fosc/3840 | - |
| 1 | 0 | 0 | fosc/3072 | - |
| 1 | 0 | 1 | fosc/2304 | - |
| 1 | 1 | 0 | fosc/1920 | - |
| 1 | 1 | 1 | fosc/1536 | - |

## Control Data Functions - continued

5. OC: Internal oscillator operating mode / External clock operating mode switching control data

| OC | Operating Mode | In/Out Pin(S52/OSC) Status | Reset <br> Condition |
| :---: | :---: | :---: | :---: |
| 0 | Internal oscillator | S52 (segment output) | 0 |
| 1 | External Clock | OSC (clock input) | - |

<External Clock input timing function>
Internal oscillation / external clock select signal behavior is below.
Input external clock after serial data sending.

## 6. SC: Segment on/off switching control data

This control data bit controls the on/off state of the segments.

| SC | Display State | Reset Condition |
| :---: | :---: | :---: |
| 0 | On | - |
| 1 | Off | 0 |

Note that when the segments are turned off by setting SC to " 1 ", the segments are turned off by outputting segment off waveforms from the segment output pins.
7. BU: Normal mode / Power-saving mode switching control data

This control data bit selects either normal mode or power-saving mode.

| BU | Mode | Reset Condition |
| :---: | :---: | :---: |
| 0 | Normal Mode | - |
| 1 | Power-saving Mode | 0 |

Power-saving mode status: S1/P1/G1 to S6/P6/G6 = active only General-purpose output
S7 to S54 = low(VSS)
COM1 to COM4 $=\operatorname{low}(V S S)$
Shut off current to the LCD drive bias voltage generation circuit
Stop the Internal oscillation circuit
However, serial data transfer is possible when Power-saving mode.
Regarding the details of the INHb pin and the control of each output, refer to "The INHb Pin and Display Control".

## Control Data Functions - continued

8. PG1, PG2, PG3, PG4, PG5 and PG6: PWM / General-purpose output switching control data

This control data bit select either PWM output or General-purpose output of Sx/Px/Gx pins. (x=1 to 6)

| $P G x(x=1$ to 6$)$ | Mode | Reset Condition |
| :---: | :---: | :---: |
| 0 | PWM output | $\circ$ |
| 1 | General-purpose output | - |

[PWM<->GPO Changing function]
Normal behavior of changing GPO to PWM is below.

- PWM operation is started by command import timing of DD:01 during GPO ---> PWM change.
- Please take care of reflect timing of new duty setting of DD:10, DD:11 is from the next PWM.

In order to avoid this operation, please input commands reversely as below.

## Control Data Functions - continued

9. PF0, PF1, PF2 and PF3: PWM output frame frequency switching control data

These control data bits set the frame frequency for PWM output.

| PF0 | PF1 | PF2 | PF3 | PWM Output Frame Frequency fp(Hz) | Reset <br> Condition |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | fosc/2048 | - |
| 0 | 0 | 0 | 1 | fosc/1920 | - |
| 0 | 0 | 1 | 0 | fosc/1792 | - |
| 0 | 0 | 1 | 1 | fosc/1664 | - |
| 0 | 1 | 0 | 0 | fosc/1536 | - |
| 0 | 1 | 0 | 1 | fosc/1408 | - |
| 0 | 1 | 1 | 0 | fosc/1280 | - |
| 0 | 1 | 1 | 1 | fosc/1152 | - |
| 1 | 0 | 0 | 0 | fosc/1024 | - |
| 1 | 0 | 0 | 1 | fosc/896 | - |
| 1 | 0 | 1 | 0 | fosc/768 | - |
| 1 | 0 | 1 | 1 | fosc/640 | - |
| 1 | 1 | 0 | 0 | fosc/512 | - |
| 1 | 1 | 0 | 1 | fosc/384 | - |
| 1 | 1 | 1 | 0 | fosc/256 | - |
| 1 | 1 | 1 | 1 | fosc/128 | - |

10. W10 to W15, W20 to W25, W30 to W35, W40 to W45, W50 to W55 and W60 to W65 ${ }^{\text {(Note) }}$ : PWM output duty switching control data
These control data bits set the high level pulse width for PWM output.

| $W n 0$ | $W n 1$ | $W n 2$ | $W n 3$ | $W n 4$ | Wn5 | PWM Duty | Reset <br> Condition |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 0 | 0 | $(1 / 64) \times T p$ | - |
| 1 | 0 | 0 | 0 | 0 | 0 | $(2 / 64) \times T p$ | - |
| 0 | 1 | 0 | 0 | 0 | 0 | $(3 / 64) \times T p$ | - |
| 1 | 1 | 0 | 0 | 0 | 0 | $(4 / 64) \times T p$ | - |

The INHb Pin and Display Control
The INHb pin operates Display off of LCD.
INHb control depends on set pin function.
Below table shows pin function and control by the INHb pin.

| Pin Function | Control |  |
| :--- | :--- | :--- |
|  | $\mathrm{INHb}=\mathrm{L}$ | $\mathrm{NHb}=\mathrm{H}$ |
| SEG/COM | Display forced off | Display on |
| PWM/GPO | Operation Stop | Operation Available |
| External Clock Input | Available regardless of INHb |  |

Below table shows pin name and pin state of $\mathrm{INHb}=\mathrm{L}$.
Each output state are decided by Control data(P0 to P2 and OC)
For the details, please refer to "Control Data Functions".

| Pin Name | Pin Function (Note) (In case of INHb = L) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | SEG | COM | PWM | GPO | External <br> Clock Input |
| S1/P1/G1 to S6/P6/G6 | Stop <br> (VSS) | - | Stop <br> (VSS) | Stop <br> (VSS) | - |
| S7 to S51, S53, S54 | Stop <br> (VSS) | - | - | - | - |
| S52/OSC | Stop <br> (VSS) | - | - | - | Clock Input <br> Operation |
| COM1 to COM4 | - | Stop <br> (VSS) | - | - | - |

(Note) "-" means the pin does not have the function.
For example, S1/P1/G1 to S6/P6/G6 are not set COM and External Clock Input.

## The INHb Pin and Display Control - continued

Since the IC internal data (the Display Data D1 to D216 and the control data) is undefined when power is first applied, applications should set the INHb pin low at the same
time as power is applied to turn off the display (This sets the S1/P1/G1 to S6/P6/G6, S7 to S54, COM1 to COM4 to the VSS level.) and during this period send serial data from the controller. The controller should then set the INHb pin high after the data transfer has completed. This procedure prevents meaningless displays at Power On.

Figure 15. Power On/Off and INHb Control Sequence (1/4 Duty)
(Note 1) $\mathrm{t} 1 \geq 0, \mathrm{t} 2 \geq 0$, $\mathrm{tc}:(\mathrm{Min}) 10 \mu \mathrm{~s}$
When VDD level is over $90 \%$, there may be cases where command is not received correctly in unstable VDD.
(Note 2) Display Data are undefined. Regarding default value, refer to "Reset Condition"
2. 1/3 Duty

Figure 16. Power On/Off and INHb Control Sequence (1/3 Duty)
When VDD level is over $90 \%$, there may be cases where command is not received correctly in unstable VDD.
(Note 4) Display Data are undefined. Regarding default value, refer to "Reset Condition".

## Oscillation Stabilization Time of the Internal Oscillation Circuit

It must be noted that the oscillation of the internal oscillation circuit is unstable for a maximum of $100 \mu \mathrm{~s}$ (oscillation stabilization time) after oscillation has started.

Internal oscillation circuit

<Oscillation start>
1.If the INHb pin status is switched from " L " to " H " when control data $\mathrm{OC}=" 0$ " and $\mathrm{BU}=" 0 "$
2.If the control data $B U$ is set from "1" to "0" when $\mathrm{INHb}=$ " H " and control data $\mathrm{OC}=" 0 "$

Figure 17. Oscillation Stabilization Time

## Power-saving mode operation in external clock mode

After receiving $[B U]=[1]$, BU91510KV-M enter to Power-saving mode synchronized with frame then Segment and Common pins output VSS level.
Therefore, in external clock mode, it is necessary to input the external clock based on each frame frequency setting after sending [BU]=[1].
For the required number of clock, refer to Control Data Functions "4. FC0, FC1 and FC2: Frame frequency switching control data".

For example, please input the external clock as below.
[FC0,FC1,FC2]=[0,0,0]: In case of fosc/6144 setting, it needs over 6144clk, [FC0,FC1,FC2] $=[0,1,0]$ : In case of fosc/4608 setting, it needs over 4608clk,
[FC0,FC1,FC2]=[1,1,1]: In case of fosc/1536 setting, it needs over 1536clk
Please refer to the timing chart below.

Figure 18. External Stop Timing(1/4 Duty)

## Voltage Detection Type Reset Circuit (VDET)

The Voltage Detection Type Reset Circuit generates an output signal and resets the system when power is applied for the first time and when voltage drops (that is, for example, the power supply voltage is less than or equal to the power down detection voltage ( $\mathrm{V}_{\mathrm{DET}}=1.8 \mathrm{~V}$ Typ) $)$. To ensure that this reset function works properly, it is recommended that a capacitor must be connected to the power supply line so that both the power supply voltage (VDD) rise time when power is first applied and the power supply voltage (VDD) fall time when the voltage drops are at least 1 ms .

To refrain from data transmission is strongly recommended while power supply is rising up or falling down to prevent from the occurrence of disturbances on transmission and reception.

Figure 19. VDET Detection Timing
Power supply voltage VDD fall time: $\mathrm{t} 1>1 \mathrm{~ms}$
Power supply voltage VDD rise time: $\mathrm{t} 2>1 \mathrm{~ms}$
Internal reset power supply retain time: $\mathrm{t} 3>1 \mathrm{~ms}$
If the above conditions cannot be satisfied, the IC may not initialize, so unintended display lighting may occur.
In order to reduce this effect, initialize the IC as soon as possible after turning on the power supply.
Refer to the IC initialization flow below.
But since commands are not received when the power is OFF, the IC initialization flow is not the same function as POR.
Set the BU command to power save mode ([BU] = [1]) and SC command to off ( $\mathrm{SC}=1$ ) immediately after turning on the power.
In BU91510KV-M, command reception is possible (VDD:90\%) Ons after turning on the power.
Refer to the timing chart for "The INHb Pin and Display Control".

## Reset Condition

When BU91510KV-M is initialized, the internal status after power supply has been reset as the following table.
Table 1. control data reset condition

| Instruction | At Reset Condition |
| :---: | :---: |
| S1/P1/G1 to S6/P6/G6 Pin | [P0,P1,P2]=[0,0,0]:all segment output |
| LCD Bias | DR=0: $1 / 3$ Bias |
| LCD Duty | DT=0: 1/4 Duty |
| Display Frequency | [FC0,FC1,FC2]=[0,0,0]:fosc/6144 |
| Display Clock Mode | OC=0:Internal oscillator |
| LCD Display | SC=1:OFF |
| Power Mode | $B \mathrm{C}=1$ :Power saving mode |
| PWM / GPO Output | PGx=0:PWM output( $\mathrm{x}=1$ to 6 ) |
| PWM Frequency | [PF0,PF1,PF2,PF3]=[0,0,0,0]:fosc/2048 |
| PWM Duty | $\begin{gathered} {[W n 0 \text { to } W n 5]=[0,0,0,0,0,0]} \\ :(1 / 64) \times \operatorname{Tp}(n=1 \text { to } 6, T p=1 / f p) \end{gathered}$ |

## Operational Notes

1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.
2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.
3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.
4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.
5. Recommended Operating Conditions

The function and operation of the IC are guaranteed within the range specified by the recommended operating conditions. The characteristic values are guaranteed only under the conditions of each item specified by the electrical characteristics.
6. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.
7. Operation Under Strong Electromagnetic Field

Operating the IC in the presence of a strong electromagnetic field may cause the IC to malfunction.

## 8. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.
9. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

## Operational Notes - continued

10. Unused Input Pins

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.
11. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.
12. Ceramic Capacitor

When using a ceramic capacitor, determine the dielectric constant considering the change of capacitance with temperature and the decrease in nominal capacitance due to DC bias and others.

## Notice

## Precaution on using ROHM Products

1. If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment (Note 1), aircraft/spacecraft, nuclear power controllers, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.
(Note1) Medical Equipment Classification of the Specific Applications

| JAPAN | USA | EU | CHINA |
| :---: | :---: | :---: | :---: |
| CLASSIII | CLASSIII | CLASS II b | CLASSIII |
|  |  | CLASSIII |  |

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
[a] Installation of protection circuits or other protective devices to improve system safety
[b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
3. Our Products are not designed under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
[a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
[b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
[c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl 2 , $\mathrm{H}_{2} \mathrm{~S}, \mathrm{NH}_{3}, \mathrm{SO}_{2}$, and $\mathrm{NO}_{2}$
[d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
[e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
[f] Sealing or coating our Products with resin or other coating materials
[g] Use of our Products without cleaning residue of flux (Exclude cases where no-clean type fluxes is used. However, recommend sufficiently about the residue.); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
[h] Use of the Products in places subject to dew condensation
4. The Products are not subject to radiation-proof design.
5. Please verify and confirm characteristics of the final or mounted products in using the Products.
6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse, is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
8. Confirm that operation temperature is within the specified range described in the product specification.
9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

## Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

## Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of lonizer, friction prevention and temperature / humidity control).

## Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
[a] the Products are exposed to sea winds or corrosive gases, including $\mathrm{Cl}_{2}, \mathrm{H}_{2} \mathrm{~S}, \mathrm{NH}_{3}, \mathrm{SO}_{2}$, and $\mathrm{NO}_{2}$
[b] the temperature or humidity exceeds those recommended by ROHM
[c] the Products are exposed to direct sunshine or condensation
[d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

## Precaution for Product Label

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

## Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

## Precaution for Foreign Exchange and Foreign Trade act

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

## Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

## Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

## General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
