

Glass Gas Discharge (GGD)

Features

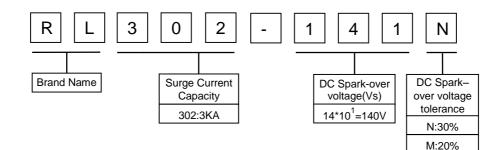

- I RoHS compliant.
- I Bilateral symmetrical.
- I Less decay at on/off state.
- Approximately zero leaking current before clamping voltage
- I High capability to withstand repeated lightning strikes.
- Low electrode capacitance(≤1.0pF) and high isolation
 (≥100MΩ).
- I Temperature, humidity and lightness insensitive.
- I Working temperature range: : -45 °C ~ +125 °C
- I Storaging temperature range: -45 $^{\circ}$ C ~ +125 $^{\circ}$ C

Applications

- I Power Supplies
- I Motor sparks eliminating
- I Relay switching spark absorbing
- I Data line pulse guarding
- I Telephone/Fax/Modem

- I High frequency signal transmitters/receivers
- I Satellite antenna
- I Radio amplifiers
- I Alarm systems
- I Cathode ray tubes in Monitors/ Television Viewing Systems

Part Number Code

Glass Gas Discharge (GGD)

RL302 Series

Electrical Characteristics

Test Methods And Results

Test Item	Test Method	Specification	
DC Spark-over Voltage Vs(V)	Measure starting discharge voltage (Vs) by gradually increasing applied DC voltage. Test current is 0.5mA max. And the DC voltage ascends up within 500V/second.	It depands on each spec.	
Insulation Resistance	Measure the insulation resistance across the terminal at regular voltage. But the test voltage doesn't over the DC spark-over voltage.	100MΩ min.	
Capacitance Cj(pF)	Measure the electrostatic capacitance by applying a voltage of less than 6V (at 1KHz) between terminals.	1pF max.	
Life	10KV with 1500pf condenser is discharged through 0 Ω resistor. 200 times at an interval of 10sec.	DC spark-over voltage JSE:	
Surge Current Capacity	1.2/50 μ s & 8/20 μ s, 3000A, electrically connected with a resistor (4~6 Ω), ±5 times, each time interval 60 seconds. Thereafter, outer appearance shall be visually examined.	No crack and no failures	
Cold Resistance	Measurement after -40 $^\circ\!\mathrm{C}$ /1000 HRS & normal temperature/2 HRS.		
Heat Resistance	Measurement after 125 $^\circ\!\!\!\!^\circ$ /1000 HRS & normal temperature/2 HRS.	Features are conformed to rated spec.	
Humidity Resistance	Measurement after humidity 90~95 $^\circ\!\mathrm{C}$ (45 $^\circ\!\mathrm{C}$) /1000 HRS & normal temperature/2 HRS.		
Temperature Cycle	10 times repetition of cycle -40 $^\circ\!\!\mathbb{C}$ /30min \to normal, temp/2 min \to 125 $^\circ\!\!\mathbb{C}$ /30min, measurement after normal temp/2 HRS.		
Solder Ability	Apply flux and immerse in molten solder $230\pm5^{\circ}$ C for 3sec up to the point of 1.5mm from body. Check for solder adhesion.	Lead wire is evenly covered by solder.	
Solder Heat	Measurement after lead wire is dipped up to the point of 1.5mm from body into 260 $\pm5^\circ\!\!\mathrm{C}$ solder for 10sec.	Conformed to rated spec.	
Pull Strength	Apply 0.5kg load for 10sec.		
Flexural Strength	Bend lead wire at the point of 2mm from body under 0.25 load and back to its original point. Repeat 1 time.	Lead shall not pull out to snap.

Glass Gas Discharge (GGD)

RL302 Series

Recommended Soldering Conditions

Flow Soldering Conditions

Hand Soldering

Solder iron temperature: $350 \pm 5^{\circ}$ C Heating time: 3 seconds max.

General attention to soldering

1. High soldering temperatures and long soldering times can cause leaching of the termination, decrease in adherence strength, and the change of characteristic may occur.

2.For soldering, please refer to the soldering curves above. However, please keep exposures to temperatures exceeding 200° C to fewer than 50 seconds.

3.Please use a mild flux (containing less than 0.2wt% Cl). Also, if the flux is water soluble, be sure to wash thoroughly to remove any residue from the underside of components that could affect resistance.

1) Time shown in the above figures is measured from the point when chip surface reaches temperature.

2) Temperature difference in high temperature part should be within 110°C

3) After soldering, do not force cool, allow the parts to cool gradually.

Cleaning

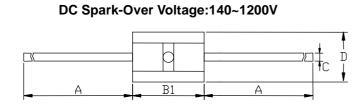

When using ultrasonic cleaning, the board may resonate if the output power is too high. Since this vibration can cause cracking or a decrease in the adherence of the termination, we recommend that you use the conditions below.

Frequency: 40kHz max.

Output power: 20W/liter

Cleaning time: 5 minutes max.
