## Notes:

1. 50 A rating refer to models with pressure wire connectors only.
2. Resistive AC load ratings are based on a power factor of 0.85 to 1.0.
3. Motor horsepower ratings are based on a power factor of 0.4 to 0.5 , and an initial inrush current not in excess of six times the full load current.
4. All ratings are based on applying the rated nominal power to the relay coil in such a manner as to provide a "clean" make and break, and does not result in any contact chatter or multiple actuation of the contacts.
5. The tungsten rating is based on cold filament inrush current not exceeding 15 times the rated steady state lamp current.
