RSL slim interface relays

Presentation of the range

RSL slim interface relays offer the advantages of compact size and modular design. Their slim width (6 mm/*0.236 in.*) saves space when mounting on a DIN rail at the back of an enclosure.

RSL relays are available as:

■ **Pre-assembled offer**: a single reference comprising a standard relay mounted on its socket.
□ The socket includes a protection circuit (against reverse polarity and surge) and an LED indicator as standard.
□ 2 types of connector are available for wire connection: screw connectors or spring terminals.
□ This pre-assembled solution covers a wide range of operating voltages from 12 to 230 V.

■ **Customer assembly offer**:
□ The relay (standard or low level) and the socket are selected, as required, according to the operating voltage of the application.
□ For maintenance, an **RSL** slim relay can be replaced without disconnecting the socket wiring.

Harmony Electromechanical Relays
## Plug-in relays
RXM miniature relays
Presentation of the range

The RXM miniature relay range comprises:
1. 12 A relays with 2 CO contacts, 10 A relays with 3 CO contacts, 6 A relays with 4 CO contacts, and 3 A "low level" relays with 4 CO contacts (all these relays have the same dimensions)
2. Sockets with mixed or separate contact terminals
3. Protection modules (diode, RC circuit, or varistor) common to all sockets
4. Metal maintaining clamp for all sockets
5. Plastic maintaining clamp for all sockets
6. 2-pole bus jumper that can be used on sockets with separate contact terminals in order to simplify cabling when creating an equipotential link between the coil terminals
7. Clip-in legends for all sockets except **RXZE2M114** and **RXZE2S114S**

These relays are available in both pre-assembled (single reference) and customer assembled offers.

Relay description

1. Spring-return pushbutton for testing the contacts (green: ⎓, red: ∿)
2. Mechanical "relay status" indicator
3. Removable lock-down door enabling forced maintaining of the contacts for test sequences or maintenance purposes
4. LED (depending on version) indicating the relay status
5. Removable legend for relay identification
6. 4 notches for rail mounting adapter or panel mounting adapter with mounting lugs
7. 8, 11, or 14 Faston type pins
8. Area by which the product can be easily gripped
9. Mounting adapter enabling direct mounting of the relay on a panel
10. Mounting adapter enabling direct mounting of the relay on a DIN rail

RT I	Dust protected relay	Relay provided with a case that helps to protect its mechanism from dust
RT II	Flux-proof relay	Relay capable of being automatically soldered without allowing the migration of solder fluxes beyond the intended areas
RT III	Wash-tight relay	Relay capable of being automatically soldered and then washed to remove flux residues and minimize the possibility of ingress of flux or washing solvents
RT IV	Sealed relay	Relay provided with a case that has no venting to the outside atmosphere
RT V	Hermetically sealed relay	Sealed relay with an enhanced level of sealing

(1) n = number of contacts.
(2) The switchable voltage can be doubled, for an equal current, by connecting 2 contacts in series.

Protection modules

Whenever an inductive load is de-energized (coil of a relay or of a contactor), an overvoltage appears at its terminals. This voltage peak can reach several thousand volts and a frequency of several MHz.
It is likely to disturb the operation of automation systems that contain electronic devices.
Protection modules are used to reduce the voltage peak on de-energization and therefore limit the energy of interference signals to a level that will not disturb surrounding coils and electronic devices.

These modules are used to help reduce the risk of:
□ electromagnetic compatibility problems
□ deterioration of contact materials
□ damage to insulation due to overvoltage
□ damage to electronic components

Diode protection module (with or without LED)
■ Advantages
□ accumulation of energy allowing current to flow in the same direction
□ absence of any voltage peaks at the coil terminals
□ low cost

■ Disadvantages
□ increase in relay drop-out time (3 to 4 times the usual time)
□ no polarity protection
□ de-energization of the relay

Protection module with varistor
■ Advantages
□ can be used with ∼ and ⎓ supply
□ voltage peak limited to about 2 Un
□ little effect on relay drop-out time

■ Disadvantages
□ no modification of coil's own oscillating frequency
□ limitation of switching frequency

Protection module with RC circuit
■ Advantages
□ coil oscillating frequency reduced to about 150 Hz
□ voltage peak limited to 3 Un
□ little effect on relay drop-out time

■ Disadvantages
□ no protection for low voltages
