Disclaimer

For physical injuries and possessions loss caused by those reasons which are not related to product quality, such as operating without following manual guide, natural disasters or force majeure, we take no responsibility for that.

Under the supervision of Seeed Technology Inc., this manual has been compiled and published which covered the latest product description and specification. The content of this manual is subject to change without notice.

Copyright

The design of this product (including software) and its accessories is under tutelage of laws. Any action to violate relevant right of our product will be penalized through law. Please consciously observe relevant local laws in the use of this product.

1. Introduction

The RTC module is based on the clock chip DS1307, which supports the I2C protocol. It utilizes a Lithium cell battery (CR1225). The clock/calendar provides seconds, minutes, hours, day, date, month, and year. The end of the month date is automatically adjusted for months with fewer than 31 days, including corrections for leap years. The clock operates in either the 24-hour or 12-hour format with AM/PM indicator. And it is valid up to 2100. In order to gain a robust performance, you must put a 3-Volt CR1225 lithium cell in the battery-holder. If you use the primary power only, the module may not work normally, because the crystal may not oscillate.

Previous Version: V0.9b

Note: The battery is not included.

2. Specification

• PCB Size: 2.0cm*4.0cm

• Interface: 2.0mm pitch pin header

• IO Structure: SCL,SDA,VCC,GND

• ROHS: YES

• VCC: 4.5~5.5V

• Logic High Level Input: 2.2~VCC+0.3 V

• Logic Low Level Input: -0.3~+0.8 V

Battery Voltage: 2.0~3.5 V

3. Demonstration

3.1 With Arduino

The following sketch demonstrates a simple application of setting the time and reading it out.

- Connect the module to the I2C Interface of Grove- Base Shield.
- Plug Grove- Base Shield into Arduino.
- Connect Arduino to PC via a USB cable.
- Download the library File:RTC Library
- Unzip it into the libraries file of Arduino IDE by the path: ..\arduino-1.0\libraries.
- Open the code directly by the path:File -> Example -> RTC-> SetTimeAndDisplay.

```
#include <Wire.h>
#include "DS1307.h"
DS1307 clock;//define a object of DS1307 class
void setup()
{
    Serial.begin(9600);
    clock.begin();
    clock.fillByYMD(2013,1,19);//Jan 19,2013
    clock. fillByHMS(15, 28, 30);//15:28 30"
    clock.fillDayOfWeek(SAT);//Saturday
    clock.setTime();//write time to the RTC chip
void loop()
    printTime();
/*Function: Display time on the serial monitor*/
void printTime()
    clock.getTime();
    Serial.print(clock.hour, DEC);
    Serial.print(":");
    Serial.print(clock.minute, DEC);
    Serial.print(":");
    Serial.print(clock.second, DEC);
    Serial.print(" ");
    Serial.print(clock.month, DEC);
```

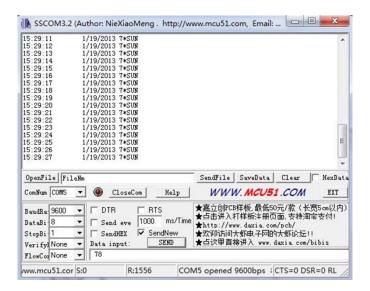

```
Serial.print("/");
Serial.print(clock.dayOfMonth, DEC);
Serial.print("/");
Serial.print(clock.year+2000, DEC);
Serial.print(" ");
Serial.print(clock.dayOfMonth);
Serial.print("*");
switch (clock.dayOfWeek)// Friendly printout the weekday
    case MON:
      Serial.print("MON");
      break;
    case TUE:
      Serial.print("TUE");
       break;
    case WED:
      Serial.print("WED");
      break;
    case THU:
      Serial.print("THU");
       break;
    case FRI:
      Serial.print("FRI");
      break;
    case SAT:
      Serial.print("SAT");
       break;
    case SUN:
       Serial.print("SUN");
       break;
Serial.println(" ");
```

 Set the time. Put function arguments change to current date/time. The attention should be paid to the arguments format.

```
clock. fillByYMD(2013, 1, 19);//Jan 19, 2013
clock. fillByHMS(15, 28, 30);//15:28 30"
clock. fillDayOfWeek(SAT);//Saturday
```

- Upload the code.
- Open the serial monitor to see the result.

The output time is changing like the clock.

3.2 With Raspberry Pi

- 1. You should have got a raspberry pi and a grovepi or grovepi+.
- 2. You should have completed configuring the development environment, otherwise follow here.
- 3. Connection.
 - Plug the sensor to grovepi socket $i2c-x(1\sim3)$ by using a grove cable.
- 4. Navigate to the demos' directory:

cd yourpath/GrovePi/Software/Python/

To see the code

```
nano grove_i2c_rtc.py  # "Ctrl+x" to exit #
import time
import grovepi

# Connect the Grove Real Time Clock to any I2C port eg. I2C-1

# Can be found at I2C address 0x68

# SCL, SDA, VCC, GND

while True:
    try:
        print grovepi.rtc_getTime()
        time.sleep(.5)

    except I0Error:
        print "Error"
```

5. Run the demo.

sudo python grove_i2c_rtc.py

6. Result

7. Use this demo to show the time in common.
