LP Transmission AC Specification

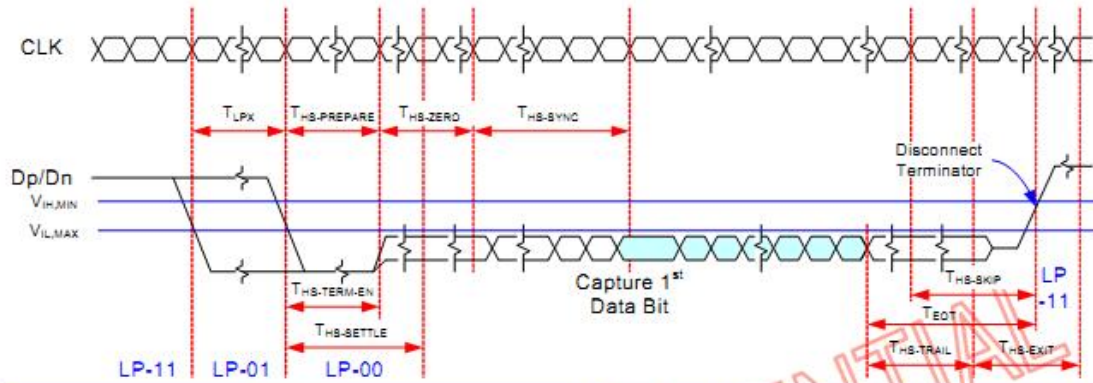

Parameter	Symbol	Min	Typ	Max	Units	Notes
15%-85% rise time and fall time	T_{rLP} / T_{fLP}			26	ns	1
30%-85% rise time and fall time	T_{rEOT}			35	ns	1,5,6
Pulse width of the LP exclusive-OR clock	First LP exclusive-OR clock pulse after STOP state or last pulse before stop state	40			ns	4
	All other pulses	20			ns	4
Period of the LP exclusive-OR clock	$T_{LPPER, TX}$	90			ns	
Slew Rate@ $C_{LOAD} = 0pF$	$\delta V / \delta t_{SR}$	30		500	mV/ns	1,2,3,7
Slew Rate@ $C_{LOAD} = 5pF$		30		200	mV/ns	1,2,3,7
Slew Rate@ $C_{LOAD} = 20pF$		30		150	mV/ns	1,2,3,7
Slew Rate@ $C_{LOAD} = 70pF$		30		100	mV/ns	1,2,3,7
Load Capacitance	C_{LOAD}			70	pF	1

Note:

- C_{LOAD} includes the low-frequency equivalent transmission line capacitance. The capacitance of TX and RX are assumed to always be $<10pF$. The distributed line capacitance can be up to $50pF$ for a transmission line with $2ns$ delay.
- When the output voltage is between 15% and below 85% of the fully settled LP signal levels.
- Measured as average across any $50mV$ segment of the output signal transition.
- This parameter value can be lower than T_{LPX} due to differences in rise vs. fall signal slopes and trip levels and mismatches between D_p and D_n LP transmitters. Any LP exclusive-OR pulse observed during HS EoT (transition from HS level to LP-11) is glitch behavior.
- The rise-time of T_{REOT} starts from the HS common-level at the moment the differential amplitude drops below $70mV$, due to stopping the differential drive.
- With an additional load capacitance CCM between $0-60pF$ on the termination center tap at RX side of the Lane.
- This value represents a corner point in a piecewise linear curve as bellowed.

High-Speed Data Transmission in Bursts

Parameter	Symbol	Min	Typ	Max	Units

Sync sequence period	$T_{HS-SYNC}$		8UI		ns
Minimum lead HS-0 drive period before the Sync sequence	$T_{HS-ZERO}$	$105+6UI$			ns

Note:

- 1: The minimum value depends on the bit rate. Implementations should ensure proper operation for all the supported bit rates.
- 2: UI means Unit Interval, equal to one half HS the clock period on the Clock Lane.
- 3: TLPX is an internal state machine timing reference. Externally measured values may differ slightly from the specified values due to asymmetrical rise and fall times.

Note 2: To be measured on the center area of panel with a viewing cone of 1° by Topcon luminance meter BM-5A, after 15 minutes operation.

Note 3: Definition of response time:

The output signals of photo detector are measured when the input signals are changed from "black" to "white" (rising time) and from "white" to "black" (falling time), respectively.

The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.

Note 4. Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Photo detector output when LCD is at "White" status}}{\text{Photo detector output when LCD is at "Black" status}}$$

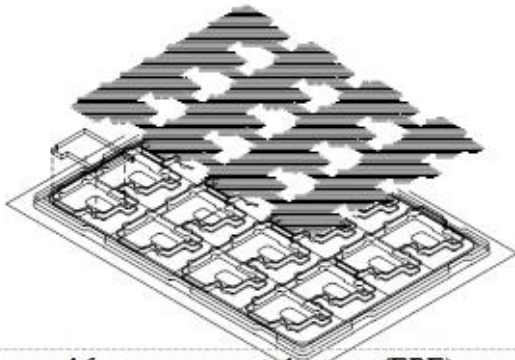

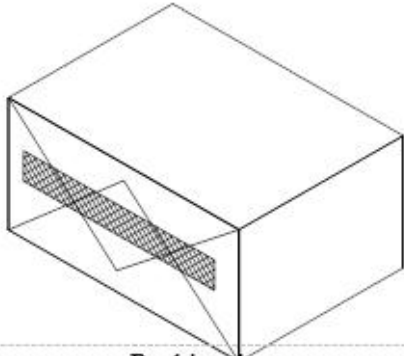

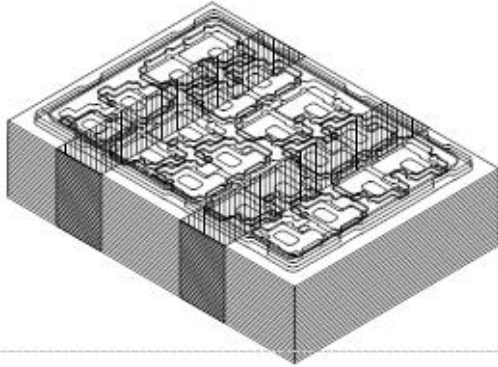

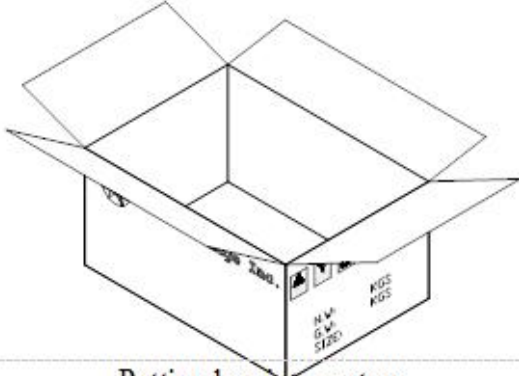

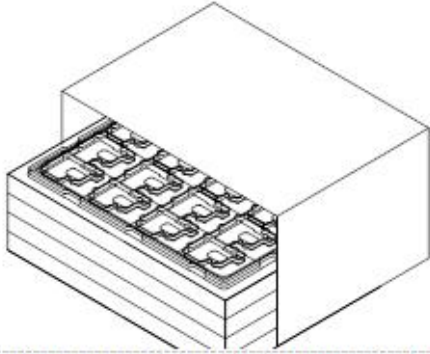

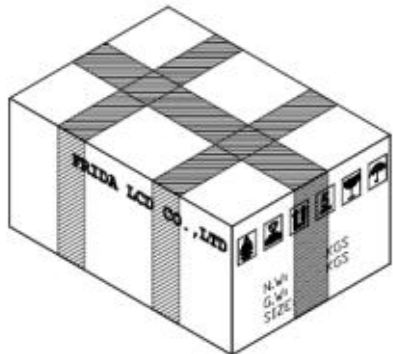

Note 5. Definition of viewing angle, θ , Refer to figure as below.

Note 6: Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

12.Precautions

Please pay attentions to the followings as using the LCD module.

Handling

- (a) Do not apply strong mechanical stress like drop, shock or any force to LCD module. It may cause improper operation, even damage.
- (b) Because the polarizer is very fragile and easy to be damaged, do not hit, press or rub the display surface with hard materials.
- (c) Do not put heavy or hard material on the display surface, and do not stack LCD modules.
- (d) If the display surface is dirty, please wipe the surface softly with cotton swab or clean cloth.
- (e) Avoid using Ketone type materials (e.g. Acetone), Toluene, Ethyl acid or Methyl chloride to clean the display surface. It might damage the touch panel surface permanently. The recommended solvents are water and Isopropyl alcohol.
- (f) Wipe off water droplets or oil immediately.
- (g) Protect the LCD module from ESD. It will damage the LSI and the electronic circuit.
- (h) Do not touch the output pins directly with bare hands.
- (i) Do not disassemble the LCD module.
- (j) Do not lift the FPC of Touch Panel.

Storage

- (a) Do not leave the LCD modules in high temperature, especially in high humidity for a long time.
- (b) Do not expose the LCD modules to sunlight directly.
- (c) The liquid crystal is deteriorated by ultraviolet. Do not leave it in strong ultraviolet ray for a long time.
- (d) Avoid condensation of water. It may cause improper operation.
- (e) Please stack only up to the number stated on carton box for storage and transportation. Excessive weight will cause deformation and damage of carton box.

	REV : A	PAGE : 19/21
SPEC TITLE DOCUMENT CONTROL SPECIFICATION	EFFECTIVE DATE : 2017-09-11	

Operation

- (a) When mounting or dismounting the LCD modules, turn the power off.
- (b) Protect the LCD modules from electric shock.
- (c) The Driver IC control algorithms stated above should always obeyed to avoid damaging the LSI and electronic circuit.
- (d) Be careful to avoid mixing up the polarity of power supply for backlight.
- (e) Absolute maximum rating specified above has to be always kept in any case. Exceeding it may cause non-recoverable damage of electronic components or, nevertheless, burning.
- (f) When a static image is displayed for a long time, remnant image is likely to occur.
- (g) Be sure to avoid bending the FPC to an acute shape, it might break FPC.
- (h) Most of the touch screens have air vent to equalize the inside air pressure to the outside one. The air vent must be open and liquid contact must be avoided as the liquid may be absorbed if the liquid is accumulated near the air vent.
- (i) For the fragility of ITO film, it should avoid to use too tapering pen as the input material.

Touch Panel Mounting Notes

- (a) If a cushion is used between bezel/housing and film must be choose as free as enough to absorb the expansion and contraction to avoid the distortion of film.
- (b) The cushion must be placed out of the Viewing Area.
- (c) Bezel/Housing edge must be posited between Key Area and Viewing Area. The edge enters the Key Area may cause unexpected input if the gap is too narrow or foreign particles like dusts exist between Bezel/Housing and ITO film.
- (d) Mounting example:

	Doc.No.: WTIMV50E-01	
	REV : A	PAGE : 20/21
SPEC TITLE DOCUMENT CONTROL SPECIFICATION	EFFECTIVE DATE : 2017-09-11	

The corner part has conductivity. Do not touch any metal part after mounting.

Others

- If the liquid crystal leaks from the panel, it should be kept away from the eyes or mouth.
- For the fragility of polarizer, it is recommended to attach a transparent protective plate over the display surface.
- It is recommended to peel off the protection film on the polarizer slowly so that the electrostatic charge can be minimized.
