**2.3 Pin Sharing Schemes**

Some pins are shared with GPIO to provide maximum flexibility for system designers. The MT7628 provides up to 41 GPIO pins. Users can configure GPIO1\_MODE and GPIO2\_MODE registers in the System Control block to specify the pin function, or they can use the registers specified below. For more information, see the Programmer's Guide. Unless specified explicitly, all the GPIO pins are in input mode after reset.

### 3.5 Storage Conditions

The calculated shelf life in a sealed bag is 12 months if stored between 0 °C and 40 °C at less than 90% relative humidity (RH). After the bag is opened, devices that are subjected to solder reflow or other high temperature processes must be handled in the following manner:

- Mounted within 168 hours of factory conditions, i.e. < 30 °C at 60% RH.
- Storage humidity needs to maintained at < 10% RH.

**3.9.4 Reflow profile guideline**

Figure 3-18 Reflow profile for MT7628

Notes;

1. Reflow profile guideline is designed for SnAgCu lead-free solder paste.
2. Reflow temperature is defined at the solder ball of package/or the lead of package.
3. MTK would recommend customer following the solder paste vendor's guideline to design a profile appropriate your line and products.
4. Appropriate N2 atmosphere is recommended since it would widen the process window and mitigate the risk for having solder open issues.
