Attention:

Due to technical requirements of components, please do not touch directly connected components. The core board and development system contain static-sensitive devices. Quiet electrical charges can easily accumulate in the human body, and the device cannot detect possible damage to equipment. It is recommended to take anti-static measures; it is recommended not to touch components stored in anti-static effect devices.

Raspberry Pi Expand Module Serial:

Raspberry Pi 0.96' OLED Display Module User Manual

Infinity cascade IO expand module:

This module is designed specifically for the Raspberry Pi IO expansion modules. The module expand 32 IO, Multiple modules can cascade, infinity cascade, infinity GPIO.

I2C GPIO expand module:

This module is designed specifically for the Raspberry Pi IO expansion modules. The Module use I2C bus to connect to Raspberry Pi. The module expand 8 Bidirectional GPIO and wit isolation protection function which can effectively excessive external voltage. There are 8 I2C address, you can choose one of them through setup the jumper. Multiple modules can cascade and maximum cascade 8 modules!

Prototype development module:

The Prototype development module is designed specifically for the Raspberry Pi. The module suitable enthusiasts and user can weld peripheral to the module; The module expand some amphenol connector and some SMT, so the user can finish prototype test easily.

Berryclip expand module:

The BerryClip module is designed specifically for learning how to use the GPIO of Raspberry Pi. There are 6 multiple color LED, 1 button and 1 Buzzer on the module.

Berryclip(DIY) expand module:

The module is not the end product, you need weld them by yourself. The function of the module is the same as BerryClip module.

UNO compatibility module:

The module makes Raspberry Pi compatible with Arduino Uno and many Arduino Shields. The module's GPIO is the same as Arduino Uno and you can choose the voltage of GPIO between 5V or 3V through setup jumper.

T Electric level convert module:

The module expand the GPIO of Raspberry Pi to breadboard. It convert 3.3V electric to 5V electric level, then the Raspberry Pi can connect many 5V electric level peripheral.

IO extraction module:

The module expand all of GPIO of Raspberry Pi to breadboard.

RTC expand module:

The RTC module is specifically designed for Raspberry Pi. There is a 0.2uF Super Capacitor on the board to keep the real time for a long time after the Raspberry Pi

Raspberry Pi 0.96' OLED Display Module User Manual

has power off.

AD/DA expand module:

The AD/DA module is specifically designed for Raspberry Pi. There is 8bit high resolution DAC and ADC on one chip.

I2C electric level conversion expand module:

The I2C electric level conversion module is specifically designed for Raspberry Pi. The module convert the 3.3V of I2C electric level to 5V level or convert 5V to 3.3V.

I2C electric level conversion expand module:

The Serial Port module is specifically designed for Raspberry Pi. The module use Maxim MAX232 chip and DB9 port. So the user don't need to connect Dupont Line and that avoid wrong wiring. User can use this mod

Product name :

Raspberry Pi 0.96' OLED display Module

Description:

Raspberry Pi 0.96' OLED display module is designed by 52pi which is made by 128x64 yellow and blue OLED pixels , diagonal is only 0.96 inch . The controller is SSD1306, communicates via 4-wire SPI, the display have its own backlight, no backlight LED is required ,This reduces the power required to run the OLED and is why the display has such high contrast , extremely wide viewing angle and extremely operating temperature

Product Overview:

Mechanical specifications:

- Outline Drawing: 370x300(mm)
- Number of pixels: 128x64
- Panel size:26.70x19.26x1.45(mm)
- Active area: 21.74x10.864(mm)
- Pixel pitch 0.17x0.17(mm)
- Pixel size: 0.154x0.154(mm)
- Weight: 15g

Active area & pixel construction :

Product Features:

- Ultra low power supply
- Maximum current 100uA
- Keep up current 12.25uA
- Hardware keep up display
- 3.3V work voltage ,([MIN 1.6V] ,[MAX:3.6V])
- Internal DC/DC voltage converter
- SPI driver support , AT 64MHz[TYP] 125MHZ[OB]
- FP frequency: 64fps[TYP] 368fps[OB]

Hardware conection

Schematic diagram:

Method Of Use:

Directly mounted on raspberry pi(A、 B、 B+)and Pi 2

Example and test code:

```
#include <stdio.h>
#include <stdlib.h>

#include <wiringPi.h>

#define byte    unsigned char
#define word    unsigned int
#define dword  unsigned long

#define XLevelL      0x00
#define XLevelH      0x10
#define XLevel      ((XLevelH&0x0F)*16+XLevelL)
#define Max_Column  128
#define Max_Row      64
#define Brightness  0xCF

#define X_WIDTH 128
#define Y_WIDTH 64
