

SC20ALMDC

Loop Powered Trip Amplifier

The SC20ALMDC is a 4-20mA direct current loop powered trip amplifier. The device derives its power from the input signal and therefore requires no external power supply. The output of the SC20ALMDC is a single pole, normally open, solid state relay which can be configured to close either above or below the adjustable setpoint. The switched output can be connected to any potential within 1kV of the transmitter supply, while transients of 2.5kV can be withstood.

The relay is designed to switch AC or DC.

The trip amplifier is typically used to activate a warning or control system override when a sensor output goes above or below a pre-set limit. Alternatively, the unit can be used for simple on/off control, having a built in switching hysteresis.

The device is housed in an ultra-compact DIN rail mounted enclosure, only 18mm wide.
