## GP1S58VJ000F

## Description

GP1S58VJ000F is a standard, phototransistor output, transmissive photointerrupter with opposing emitter and detector in a case, providing non-contact sensing. For this family of devices, the emitter and detector are inserted in a case, resulting in a through-hole design.

This device uses positioning pins to insure accurate placement and avoid miss-orientation of the emitter and detector.

## - Features

1. Transmissive with phototransistor output
2. Highlights :

- Vertical Slit for alternate motion detection
- Positioning Pin to prevent misalignment

3. Key Parameters :

- Gap Width : 5mm
- Slit Width (detector side): 0.5 mm
- Package : $13.7 \times 10 \times 5.2 \mathrm{~mm}$

4. RoHS directive compliant

## Gap : 5mm, Slit : 0.5mm Phototransistor Output, Case package Transmissive Photointerrupter

## Agency approvals/Compliance

1. Compliant with RoHS directive

## Applications

1. General purpose detection of object presence or motion.
2. Example : Printer, FAX, Optical storage unit

Design Considerations

## - Design guide

1) Prevention of detection error

To prevent photointerrupter from faulty operation caused by external light, do not set the detecting face to the external light.
2) Position of opaque board

Opaque board shall be installed at place 4 mm or more from the top of elements.
(Example)

This product is not designed against irradiation and incorporates non-coherent IRED.

## - Degradation

In general, the emission of the IRED used in photocouplers will degrade over time.
In the case of long term operation, please take the general IRED degradation ( $50 \%$ degradation over 5 years) into the design consideration.

## Parts

This product is assembled using the below parts.

- Photodetector (qty. : 1)

| Category | Material | Maximum Sensitivity <br> wavelength (nm) | Sensitivity <br> wavelength (nm) | Response time ( $\mu \mathrm{s}$ ) |
| :---: | :---: | :---: | :---: | :---: |
| Phototransistor | Silicon $(\mathrm{Si})$ | 800 | 400 to 1200 | 3 |

- Photo emitter (qty. : 1)

| Category | Material | Maximum light emitting <br> wavelength (nm) | I/O Frequency (MHz) |
| :---: | :---: | :---: | :---: |
| Infrared emitting diode <br> (non-coherent) | Gallium arsenide (GaAs) | 950 | 0.3 |

- Material

| Case | Lead frame plating |
| :---: | :---: |
| Black NORYL resin | Solder dip. (Sn-3Ag-0.5Cu) |

## Manufacturing Guidelines

## Soldering Method

## Flow Soldering:

Soldering should be completed below $260^{\circ} \mathrm{C}$ and within 5 s .
Please take care not to let any external force exert on lead pins.
Please don't do soldering with preheating, and please don't do soldering by reflow.

## Hand soldering

Hand soldering should be completed within 3 s when the point of solder iron is below $350^{\circ} \mathrm{C}$.
Please solder within one time.
Please don't touch the terminals directly by soldering iron.
Soldered product shall treat at normal temperature.

## Other notice

Please test the soldering method in actual condition and make sure the soldering works fine, since the impact on the junction between the device and PCB varies depending on the cooling and soldering conditions.

## Flux

Some flux, which is used in soldering, may crack the package due to synergistic effect of alcohol in flux and the rise in temperature by heat in soldering. Therefore, in using flux, please make sure that it does not have any influence on appearance and reliability of the photointerrupter.

## - Cleaning instructions

## Solvent cleaning :

Solvent temperature should be $45^{\circ} \mathrm{C}$ or below. Immersion time should be 3 minutes or less.

## Ultrasonic cleaning :

The affect to device by ultrasonic cleaning is different by cleaning bath size, ultrasonic power output, cleaning time, PCB size or device mounting condition etc.
Please test it in actual using condition and confirm that doesn't occur any defect before starting the ultrasonic cleaning.

## Recommended solvent materials:

Ethyl alcohol, Methyl alcohol and Isopropyl alcohol.

## - Presence of ODC

This product shall not contain the following materials.
And they are not used in the production process for this product.
Regulation substances: CFCs, Halon, Carbon tetrachloride, 1.1.1-Trichloroethane (Methylchloroform)

Specific brominated flame retardants such as the PBB and PBDE are not used in this product at all.
This product shall not contain the following materials banned in the RoHS Directive (2002/95/EC).
-Lead, Mercury, Cadmium, Hexavalent chromium, Polybrominated biphenyls (PBB), Polybrominated diphenyl ethers (PBDE).

## Package specification

## - Case package

## Package materials

Anti-static plastic bag : Polyethtylene
Moltopren : Urethane
Partition : Corrugated fiberboard
Packing case : Corrugated fiberboard

## Package method

100 pcs of products shall be packaged in a plastic bag, Ends shall be fixed be by stoppers. The bottom ot the packing case is covered with moltopren, and the partition is set in the packing case. Each partition should have 1 plastic bag.
The 10 plastic bags containing a product are put in the packing case.
Moltopren should be located after all product are settled (1 packing contains 1000 pcs).

## Packing composition

## Important Notices

- The circuit application examples in this publication are provided to explain representative applications of SHARP devices and are not intended to guarantee any circuit design or license any intellectual property rights. SHARP takes no responsibility for any problems related to any intellectual property right of a third party resulting from the use of SHARP's devices.
- Contact SHARP in order to obtain the latest device specification sheets before using any SHARP device. SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structure, and other contents described herein at any time without notice in order to improve design or reliability. Manufacturing locations are also subject to change without notice.
- Observe the following points when using any devices in this publication. SHARP takes no responsibility for damage caused by improper use of the devices which does not meet the conditions and absolute maximum ratings to be used specified in the relevant specification sheet nor meet the following conditions:
(i) The devices in this publication are designed for use in general electronic equipment designs such as:
--- Personal computers
--- Office automation equipment
--- Telecommunication equipment [terminal]
--- Test and measurement equipment
--- Industrial control
--- Audio visual equipment
--- Consumer electronics
(ii) Measures such as fail-safe function and redundant design should be taken to ensure reliability and safety when SHARP devices are used for or in connection
with equipment that requires higher reliability such as:
--- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
--- Traffic signals
--- Gas leakage sensor breakers
--- Alarm equipment
--- Various safety devices, etc.
(iii) SHARP devices shall not be used for or in connection with equipment that requires an extremely high level of reliability and safety such as:
--- Space applications
--- Telecommunication equipment [trunk lines]
--- Nuclear power control equipment
--- Medical and other life support equipment (e.g., scuba).
- If the SHARP devices listed in this publication fall within the scope of strategic products described in the Foreign Exchange and Foreign Trade Law of Japan, it is necessary to obtain approval to export such SHARP devices.
- This publication is the proprietary product of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.
- Contact and consult with a SHARP representative if there are any questions about the contents of this publication.
