

**SY7120**

**High Efficiency, 16V, 10A
Synchronous Step Up Regulator
Advanced Design Specification**

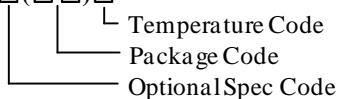

General Description

SY7120 develops a high efficiency, high power density synchronous Boost regulator. The device adopts adaptive constant OFF time and current mode control. The integrated low $R_{DS(ON)}$ switches minimize the conduction loss.

SY7120 provides selectable PFM/PWM light load operation mode. The device features cycle by cycle peak current limit. Low output voltage ripple and small external inductor and capacitor size are achieved with programmable pseudo-constant frequency.

Note 1: Stresses beyond the “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

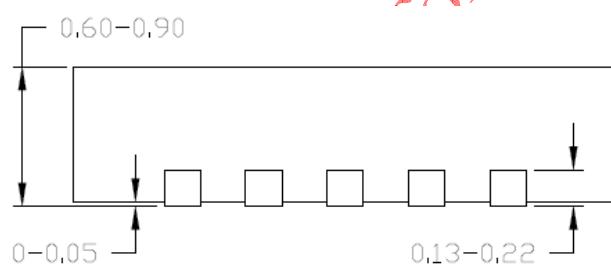

Note 2: θ_{JA} is measured in the natural convection at $T_A = 25^\circ C$ on a low effective single layer thermal conductivity test board of JEDEC 51-3 thermal measurement standard. Paddle of QFN3x3-20 package is the case position for θ_{JC} measurement.

Note 3: The device is not guaranteed to function outside its operating conditions.
