## SKYWORIS ${ }^{\circ}$

## DATA SHEET

## AA264-87, AA264-87LF: GaAs IC 4-Bit Digital Attenuator 2 dB LSB Positive Control 0.5-2 GHz

## Features

- Attenuation 2 dB steps to 30 dB with high accuracy
- Single positive control for each bit
- Low DC Power consumption
- Small, low-cost TSSOP-16 plastic package
- Available lead (Pb)-free and RoHS-compliant MSL-1 @ $260{ }^{\circ} \mathrm{C}$ per JEDEC J-STD-020

## Description

The AA264-87 is a 4-bit, single positive control GaAs IC FET digital attenuator in a low-cost TSSOP-16 package. The attenuator requires external DC blocking capacitors, positive supply voltage $\left(V_{S}\right)$ and four individual positive control voltages $\left(V_{1}-V_{4}\right)$. The AA264-87 is particularly suited where high attenuation accuracy, low insertion loss and low intermodulation products are required. Typical applications include base station, wireless data and wireless local loop gain control circuits.

## NEW

Skyworks offers lead (Pb)-free, RoHS (Restriction of Hazardous Substances)-compliant packaging.

## Pin Out

DC blocking capacitors ( $\mathrm{C}_{\mathrm{BL}}$ ) and biasing resistor must be supplied externally for positive voltage operation.
$\mathrm{C}_{\mathrm{BL}}=47 \mathrm{pF}$ for operation $>500 \mathrm{MHz}$.

Performance is guaranteed only under the conditions listed in the specifications table and is not guaranteed under the full range(s) described by the Absolute Maximum specifications Exceeding any of the absolute maximum/minimum specifications may result in permanent damage to the device and will void the warranty.

CAUTION: Although this device is designed to be as robust as possible, ESD (Electrostatic Discharge) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions must be employed at all times.
