Description

The OLS500 is suitable for high-speed digital interfacing applications, elimination of ground loops, and input/output buffering. Each OLS500 has an LED and integrated high-speed detector mounted and coupled in a custom hermetic surface mount Leadless Chip Carrier (LCC) ceramic package, that provides $1500\text{ V}_{\text{DC}}$ electrical isolation between the input and output.

The light from the LED is collected by the photodiode in the integrated detector and amplified by a high gain linear amplifier that drives a Schottky-clamped open collector output transistor. Typical propagation delay for the OLS500 is 60 ns. The internal shield improves common mode transient immunity to 1000 $\text{V}/\mu\text{s}$ minimum.

Device mounting is achieved with reflow soldering or conductive epoxies.

Total power dissipation	P _D		+170	mW
<i>Input Diode</i>				
Average input current	I _{DD}		20	mA
Peak forward current (≤1 ms duration)	I _F		40	mA
Reverse voltage	V _R		5	V

<i>Output Detector</i>				
Peak output current			25	mA
Supply voltage (1 minute maximum)	V _{CC}		7	V
Output collector power dissipation	P _D		40	mW

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to the device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Note 2: A ceramic bypass capacitor (0.01 μF to 0.1 μF) is required between pins 3 and 5 to stabilize the operation of the amplifier.

Note 3: Measured between pins 1, 2, and 6 shorted together, and pins 3, 4, and 5 shorted together. T_A = 25°C and duration = 1 s.
