# SE2433T: 2.4 GHz Power Amplifier

## Applications

- ISM band applications
- Smart meters
- In-home appliances
- Smart thermostats
- Remote controls

## Features

- Suitable for Zigbee®, Bluetooth® Low Energy, and Bluetooth 1.0
- High output power at +24 dBm
- Integrated interstage matching
- Integrated 50 Ω input matching
- Fast switch ON/OFF time <1 μs
- 2.0 V to 3.6 V supply operation
- Standby current <1 μA
- QFN package (12-pin, 2.5 x 2 x 0.55 mm, (MSL1, 260 °C per JEDEC J-STD-020)

## Description

The SE2433T is a high-performance power amplifier, suitable for Zigbee, Bluetooth Low Energy, and Bluetooth 1.0 applications. The SE2433T is designed for ease of use and maximum flexibility, with an integrated input match and a digital enable control for Complementary Metal Oxide Semiconductor (CMOS) compatible device on/off control. A functional block diagram of the SE2433T is provided in Figure 1. Figure 2 shows the pinout for the SE2433T. Table 1 lists the pin assignments and signal descriptions.

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

*N/C pins can be connected to ground, but the DNC pin should be left floating*

**Figure 2. SE2433T Pinout (Top View)**

**Table 1. SE2433T Signal Descriptions (Note 1)**

Pin	Name	Description	Pin	Name	Description
1	B2	Connect through bias resistor to Pin 11, second stage bias.	7	N/C	Not connected.
2	B1	Connect through bias resistor to Pin 11, first stage bias.	8	N/C	Not connected.
3	VCC1	Power supply. Connect to positive supply.	9	RFOUT	RF output port.
4	RFIN	Input port, Connect to 50 Ω single-ended RF source, DC short to GND.	10	DNC	Do not connect.
5	GND	Ground. Connect to PCB ground.	11	BOUT	Bias supply, Connect to through bias resistors to pins 1 and 2.
6	N/C	Not connected.	12	PAEN	PA enable, Connect to GPIO signal to control power-up status (see Table 7) .
			Paddle	GND	Exposed die paddle; electrical and thermal ground; Connect to PCB ground.

**Note 1:** The N/C pins can be connected to ground, but the DNC pin should be left floating.

### Electrical and Mechanical Specifications

Table 2 provides the absolute maximum ratings, and Table 3 shows the recommended operating conditions. Electrical characteristics are shown in Tables 4 and 5.

Logic characteristics and logic controls are provided in Tables 6 and 7, respectively.

Typical performance characteristics are shown in Figures 3 through 14.

**Table 2. SE2433T Absolute Maximum Ratings (Note 1)**

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	VCC	-0.3	3.6	V
Control pin voltages		-0.3	3.6	V
Operating temperature	T <sub>OP</sub>	-0.3	85	°C
Storage temperature	T <sub>STG</sub>	-40	125	°C

Electrostatic discharge: Human Body Model (HBM), Class 1B	ESD		500	V

**Note 1:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

### Evaluation Board Description

The SE2433T Evaluation Board is used to test the performance of the SE2433T FEM. The Evaluation Board schematic diagram is shown in Figure 15. A reference design schematic is shown in Figure 16. A photograph of the Evaluation Board is shown in Figure 17. Component values for the SE2433T Evaluation Board are listed in the Bill of Materials (BOM) in Table 8.

### Circuit Design Considerations

The following design considerations are general in nature and must be followed regardless of final use or configuration:

- Paths to ground should be made as short as possible.
- The ground pad of the SE2433T has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Since the circuit board acts as the heat sink, it must shunt as much heat as possible from the device.

Therefore, design the connection to the ground pad to dissipate the maximum wattage produced by the circuit board. Multiple vias to the grounding layer are required.

**NOTE:** A poor connection between the ground pad and ground increases junction temperature ( $T_j$ ), which reduces the life of the device.

### Evaluation Board Setup Procedure

1. Connect (J1 and J2) to 50 Ω instruments. Terminate all unused ports (if applicable) with 50 Ω.
2. Connect the supply ground to Pin 7.
3. Connect 3.0 V to Pins 1, 3, and 6 of J3.
4. Apply an RF signal to connector J1 (RF\_IN) to monitor the 2.4 GHz amplifier performance. Monitor the output power on connector J2 (RF\_OUT).

---

**CAUTION:** Care should be taken not to overdrive the amplifier by applying too much RF on the input. A suitable starting input power for the device is  $-20$  dBm.

## Package Dimensions

The recommended land and solder patterns for the SE2433T are provided in Figure 18. Typical part markings are shown in Figure 19. Package dimensions for the are shown in Figure 20, and tape and reel dimensions are provided in Figure 21.

## Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SE2433T is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Notes:

1. All dimensions are in millimeters.
2. Dimensions and tolerances per ASME 14.5M-1994.
3. Unless specified, dimensions are symmetrical about center lines.
4. Via hole recommendations:  
0.025 mm Cu via wall plating (minimum), via holes to be filled with conductive paste and plated over.
5. Stencil recommendations:  
0.10 mm stencil thickness, laser cut apertures, trapezoidal walls and rounded corners offer better paste release.
6. Solder mask recommendations:

 X.XX (2 places) ± 0.05 mm  
 X.XXX (3 places) ± 0.025 mm
4. Coplanarity applies to the terminals as well as all other bottom surface metallization.
5. Dimension applies to metallized terminal. If terminal tip has a radius, dimension should not be measured in that radius area.
6. Unless specified, dimensions are symmetrical about center lines.
