## Data Sheet

### 12/8/4/2-Output PCI-Express Gen 1/2/3/4/5 and SRIS Clock Generator

The Si52212/08/04/02 are the industry's highest performance and lowest power PCI Express clock generator family for 1.5–1.8 V PCIe Gen 1/2/3/4/5 and SRIS applications. The Si52212, Si52208, and Si52204 can source twelve, eight, and four 100 MHz PCIe differential clock outputs, respectively, plus one 25 MHz LVCMOS reference clock output. The Si52202 can source two 100 MHz PCIe clock outputs only. All differential clock outputs are compliant to PCIe Gen1/2/3/4/5 common clock and separate reference clock architectures specifications.

The Si52212/08/04/02 feature individual hardware control pins for enabling and disabling each output, spread spectrum enable/disable for EMI reduction, and frequency select to select 100, 133, or 200 MHz differential output frequencies. These features can also be controlled via I<sup>2</sup>C.

The small footprint and low power consumption make this family of PCIe clock generators ideal for industrial and consumer applications.

For more information about PCI-Express, Skyworks' complete PCIe portfolio, application notes, and design tools, including the Skyworks PCIe Clock Jitter Tool for PCI-Express compliance, please visit the Skyworks [PCI Express Learning Center](#).

#### Applications

- Servers
- Storage
- Data Centers
- PCIe Add-on Cards
- Network Interface Cards (NIC)
- Graphics Adapter Cards
- Multi-function Printers
- Digital Single-Lens Reflex (DSLR) Cameras
- Digital Still Cameras
- Digital Video Cameras
- Docking Stations

#### KEY FEATURES

- 12/8/4/2-output low-power, push-pull HCSL compatible PCI-Express Gen 1, Gen 2, Gen 3, Gen 4, Gen 5, and SRIS-compliant outputs
- Low jitter: 0.13 ps rms max, Gen 5
- Individual hardware control pins and I<sup>2</sup>C controls for Output Enable, Spread Spectrum Enable and Frequency Select
- Triangular spread spectrum for EMI reduction, down spread 0.25% or 0.5%
- Internal 100 Ω or 85 Ω line matching
- Adjustable output slew rate
- Power down (PWRDNb) function supports Wake-on LAN (except Si52202)
- One non-spread, LVCMOS reference clock output (except Si52202)
- Frequency Select to select 133 MHz or 200 MHz (except Si52202)
- 25 MHz crystal input or clock input
- I<sup>2</sup>C support with readback capabilities
- Extended temperature: –40 to 85 °C
- 1.5–1.8 V power supply, with separate VDD and VDD\_IO
- Small QFN packages
- Pb-free, RoHS-6 compliant

## 1. Feature List

- 12/8/4/2-output 100 MHz PCIe Gen 1/2/3/4/5 and SRIS compliant clock generator, with push-pull HCSL output drivers
  - High port count with push-pull HCSL outputs to support highly integrated solution, eliminating external resistors for the HCSL output drivers
- Low jitter of 0.13 ps rms max to meet PCIe Gen5 specifications with design margin
- Low power consumption.
  - Lowest power consumption in the industry for a 2-output PCIe clock generator
- Individual hardware control pins and I<sup>2</sup>C controls for Output Enable, Spread Spectrum Enable and Frequency Select
  - Output Enable function easily disables unused outputs for power saving
  - Spread Enable function to turn on/off spread spectrum and to select spread levels, either down spread 0.25% or 0.5%
  - Frequency Select function to select output frequency of 100 MHz, 133 MHz, or 200 MHz (except Si52202 where the output frequency is limited to 100 MHz. Please contact Skyworks for 133 MHz or 200 MHz in Si52202)
  - All above functions are controlled by individual hardware pins or I<sup>2</sup>C
- Internal 100  $\Omega$  or 85  $\Omega$  impedance matching
  - Eliminates external line matching resistor to reduce board space
- Adjustable slew rate to improve signal quality for different applications and board designs
- Power down (PWRDNb) function supports Wake-on LAN (except Si52202)
- One non-spread, 25 MHz LVCMOS reference clock output (except Si52202)
  - A buffered 25 MHz LVCMOS clock output to drive ASICS or SoCs on board
- 25 MHz reference input
  - Supports a standard crystal or clock input for flexibility
- I<sup>2</sup>C support with readback capabilities
- 1.5–1.8 V power supply with separate VDD and VDD\_IO (1.05 to 1.8 V)
- Temperature range: –40 °C to 85 °C
- Small QFN packages to optimize board space. Smallest 2-output PCIe clock generator in the industry
  - 64-pin QFN (9 x 9 mm) : 12-output
  - 48-pin QFN (6 x 6 mm) : 8-output
  - 32-pin QFN (5 x 5 mm) : 4-output
  - 20-pin QFN (3 x 3 mm) : 2-output
- Pb-free, RoHS-6 compliant

## 2. Ordering Guide

**Table 2.1. Si522x Ordering Guide**

Number of Outputs	Internal Termination	Part Number	Package Type	Temperature
12-output	100 Ω	Si52212-A01AGM	64-QFN	Extended, -40 to 85 °C
		Si52212-A01AGMR	64-QFN - Tape and Reel	Extended, -40 to 85 °C
	85 Ω	Si52212-A02AGM	64-QFN	Extended, -40 to 85 °C
		Si52212-A02AGMR	64-QFN - Tape and Reel	Extended, -40 to 85 °C
8-output	100 Ω	Si52208-A01AGM	48-QFN	Extended, -40 to 85 °C
		Si52208-A01AGMR	48-QFN - Tape and Reel	Extended, -40 to 85 °C
	85 Ω	Si52208-A02AGM	48-QFN	Extended, -40 to 85 °C
		Si52208-A02AGMR	48-QFN - Tape and Reel	Extended, -40 to 85 °C
4-output	100 Ω	Si52204-A01BGM	32-QFN	Extended, -40 to 85 °C
		Si52204-A01BGMR	32-QFN - Tape and Reel	Extended, -40 to 85 °C
	85 Ω	Si52204-A02BGM	32-QFN	Extended, -40 to 85 °C
		Si52204-A02BGMR	32-QFN - Tape and Reel	Extended, -40 to 85 °C
2-output	100 Ω	Si52202-A01BGM	20-QFN	Extended, -40 to 85 °C
		Si52202-A01BGMR	20-QFN - Tape and Reel	Extended, -40 to 85 °C
	85 Ω	Si52202-A02BGM	20-QFN	Extended, -40 to 85 °C
		Si52202-A02BGMR	20-QFN - Tape and Reel	Extended, -40 to 85 °C

<b>Note:</b> While using multiple power supplies, the voltage on any input or I/O pin cannot exceed the power pin during power-up. Power supply sequencing is not required.						

## 5. Functional Description

### 5.1 Crystal Recommendations

The clock device requires a parallel resonance crystal.

**Table 5.1. Crystal Recommendations**

Frequency (Fund)	Cut	Loading	Load Cap	Shunt Cap (max)	Motional (max)	Tolerance (max)	Stability (max)	Aging (max)
25 MHz	AT	Parallel	8–15 pF	5 pF	0.016 pF	35 ppm	30 ppm	5 ppm

### 5.2 Crystal Loading

Crystal loading is critical in achieving low ppm performance. To realize low ppm performance, use the total capacitance the crystal sees to calculate the appropriate capacitive loading (CL).

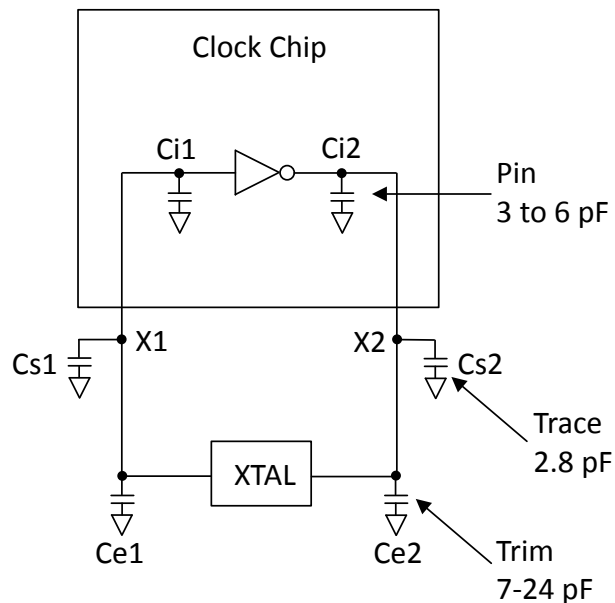

The figure below shows a typical crystal configuration using the two trim capacitors. It is important that the trim capacitors are in series with the crystal.

**Figure 5.1. Crystal Capacitive Clarification**

### 5.3 Calculating Load Capacitors

In addition to the standard external trim capacitors, consider the trace capacitance and pin capacitance to calculate the crystal loading correctly. The total capacitance on both sides is twice the specified crystal load capacitance (CL). Trim capacitors are calculated to provide equal capacitive loading on both sides.

**Figure 5.2. Crystal Loading Example**

Use the following formulas to calculate the trim capacitor values for Ce1 and Ce2:

**Load Capacitance (each side)**

$$C_e = 2 \times CL - (C_s + C_i)$$

**Total Capacitance (as seen by the crystal)**

$$CL_e = \frac{1}{\left( \frac{1}{C_e + C_{s1} + C_{i1}} + \frac{1}{C_e + C_{s2} + C_{i2}} \right)}$$

- CL: Crystal load capacitance
- CL<sub>e</sub>: Actual loading seen by crystal using standard value trim capacitors
- C<sub>e</sub>: External trim capacitors
- C<sub>s</sub>: Stray capacitance (terraced)
- C<sub>i</sub> : Internal capacitance (lead frame, bond wires, etc.)

### 5.4 Power Supply Filtering Recommendations

Figure 5.3. Power Supply Filtering

Separate out each type of VDD (VDD, VDDA, VDDX, VDDR, and VDD\_IO) using ferrite beads. Then, for each VDD type use one 1 µF bulk capacitor along with an additional 0.1 µF capacitor for each individual VDD pin. All VDD Core (VDD, VDDA, VDDX, and VDDR) pins should be tied to the same voltage, either 1.8 V or 1.5 V. The VDD\_IO pins can be tied to a voltage between 1 V and the selected VDD Core voltage. Note, the VDD\_IO pins must all be tied to the same voltage.

### 5.5 PWRGD/PWRDNb (Power Down) Pin

The PWRGD/PWRDNb pin is a dual-function pin. During initial power up, the pin functions as the PWRGD pin. Upon the first power up, if the PWRGD pin is low, all outputs, the crystal oscillator, and the I<sup>2</sup>C logics will be disabled. Once the PWRGD pin has been sampled high by the clock chip, the pin assumes a PWRDNb functionality. When the pin has assumed a PWRDNb functionality and is pulled low, the device will be placed in power down mode. The assertion and deassertion of PWRDNb is asynchronous. This pin has a 100 kΩ internal pull-up.

Figure 5.4. Initial Sample High of PWRGD/PWRDNb After Power Up

## 5.6 PWRDNb (Power Down) Assertion

The PWRDNb pin is an asynchronous active low input used to disable all output clocks in a glitch-free manner. In power down mode, all outputs, the crystal oscillator, and the I<sup>2</sup>C logic are disabled. In cases where the REF PWRDN (Byte 2, bit 2) is set to 1, the crystal oscillator and REF output will still be enabled. All disabled outputs will be driven low.

Figure 5.5. PWRDNb Assertion

## 5.7 PWRDNb (Power Down) Deassertion

When a valid rising edge on PWRGD/PWRDNb pin is applied, all outputs are enabled in a glitch-free manner within 520  $\mu$ s.

Figure 5.6. Subsequent Deassertion of PWRDNb

## 5.8 OEB Pin

The OEB pin is an active low input used to enable and disable the output clock. To enable the output clock, the OEB pin needs to be logic low, and I<sup>2</sup>C OE bit needs to be logic high. By default, the OEB pin is set to logic low, and I<sup>2</sup>C OE bit is set to logic high. There are two methods to disable the output clock: the OEB pin is pulled to a logic high, or the I<sup>2</sup>C OE bit is set to a logic low. This pin has a 100 k $\Omega$  internal pull-down.

## 5.9 OEB Assertion

The OEB pin is an active low input used for synchronous stopping and starting the respective output clock while the rest of the clock generator continues to function. The assertion of the OEB function is achieved by pulling the OEB pin low while the I<sup>2</sup>C OE bit is high, which causes the respective stopped output to resume normal operation. No short or stretched clock pulses are produced when the clocks resume.

### 5.10 OEB Deassertion

The OEB function is deasserted by pulling high or writing the I<sup>2</sup>C OE bit to a logic low. The corresponding output is stopped cleanly and the final output state is driven low.

### 5.11 FS Pin

The FS pin will select 0 = 100 MHz, mid = 200 MHz, and 1 = 133 MHz. This is a tri-state pin, which has a weak internal pull-down of approximately 100 kΩ.

The default output frequency is 100 MHz.

### 5.12 SS\_EN Pin

The SS\_EN pin will select 0 = -0.25% spread, mid = Spread is off, and 1 = -0.5% spread. This is a tri-state pin, which has a weak internal pull-up of approximately 100 kΩ.

The default is -0.5% spread.

### 5.13 Recommendations for Driving Tri-State Pins

Figure 5.7. Tri-State Pin Schematics

## 5.14 REF/SA Pin

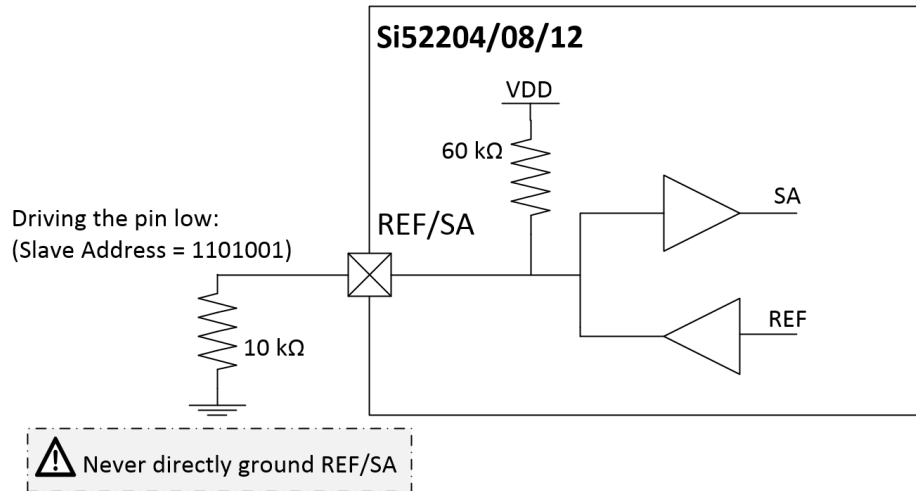

Figure 5.8. REF/SA Pin Function

The REF/SA pin is a dual-function input/output pin.

The SA functionality sets the Slave Address of the part. This address is latched to the value of the pin when the part initially powers up. See [Table 8.1 SA State on First Application of PWRDNb on page 32](#) for the available addresses. By default, the internal 60 kΩ pull-up resistor will set SA to a value of 1. To drive the pin low, use a 10 kΩ pull-down resistor.

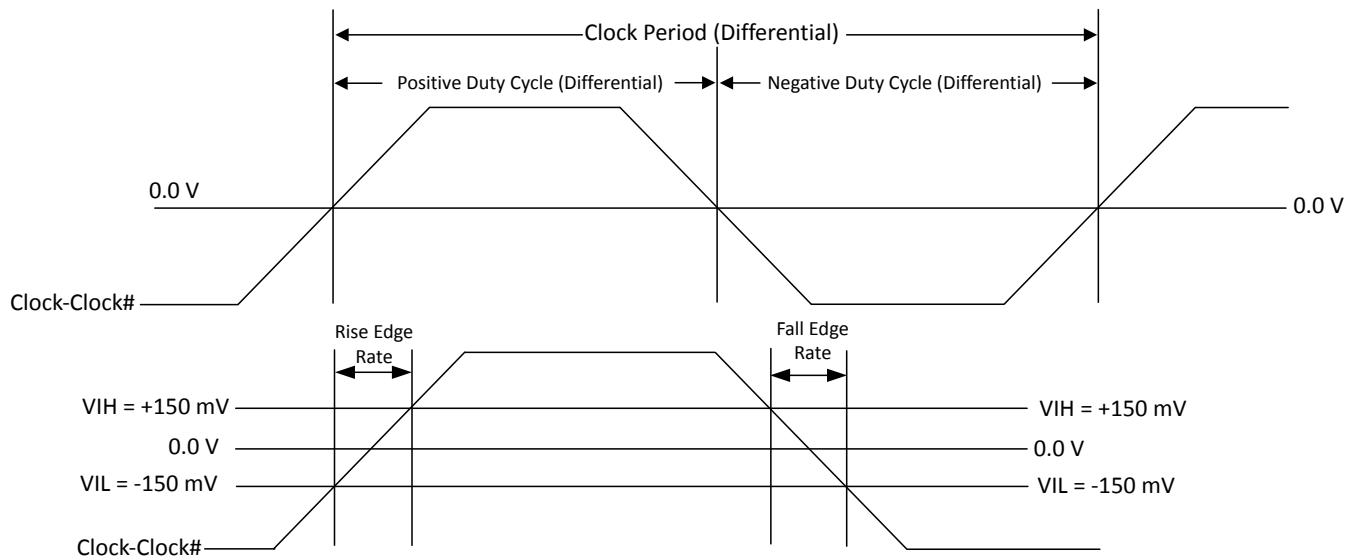

After the I<sup>2</sup>C address is latched on first power up, the REF/SA pin assumes its REF functionality. In REF mode, it will output a 25 MHz LVCMOS signal.

## 6. Test and Measurement Setup

The following diagrams show the test load configuration for the differential clock signals.

**Figure 6.1. 0.7 V Differential Load Configuration**

**Figure 6.2. Differential Output Signals (for AC Parameters Measurement)**

Figure 6.3. Single-Ended Measurement for Differential Output Signals (for AC Parameters Measurement)

## 7. PCIe Clock Jitter Tool

The PCIe Clock Jitter Tool is designed to enable users to quickly and easily take jitter measurements for PCIe Gen1/2/3/4/5 and SRNS/SRIS. This software removes all the guesswork for PCIe Gen1/2/3/4/5 and SRNS/SRIS jitter measurements and margins in board designs. This software tool will provide accurate results in just a few clicks, and is provided in an executable format to support various common input waveform files, such as .csv, .wfm, and .bin. The easy-to-use GUI and helpful tips guide users through each step. Release notes and other documentation are also included in the software package.

Download it for free at <https://www.skyworksinc.com/en/application-pages/pci-express-learning-center>.

**PLL and CDR Transfer Functions**

$$Tx\ PLL\ H_1(s) = \frac{2 \cdot s \cdot \zeta_1 \cdot \omega_{n1} + \omega_{n1}^2}{s^2 + 2 \cdot s \cdot \zeta_1 \cdot \omega_{n1} + \omega_{n1}^2}$$

$$Rx\ PLL\ H_2(s) = \frac{2 \cdot s \cdot \zeta_2 \cdot \omega_{n2} + \omega_{n2}^2}{s^2 + 2 \cdot s \cdot \zeta_2 \cdot \omega_{n2} + \omega_{n2}^2}$$

$$CDR\ H_3(s) = \frac{s^2}{(s + \omega_0)(s + \omega_1)} \times \frac{s^2 + 2 \cdot \zeta_2 \cdot \omega_0 \cdot s + \omega_0^2}{2 \cdot \zeta_2 \cdot \omega_0 \cdot s + \omega_0^2} \times \frac{s}{s + \omega_1}$$

**Common Clock Architecture**

Diagram showing PCIe Device A and PCIe Device B connected via a PCIe Link. Device A contains a Tx PLL and Tx Latch. Device B contains an Rx PLL, CDR, and Rx Latch. A 100 MHz clock source (+100, -2600ppm) is connected to both Tx PLL and Rx PLL. Frequency response plots for H1(s), H2(s), and H3(s) are shown near their respective components.

**Sample Filter Magnitude Response**

Graph showing Magnitude (dB) vs. Frequency (Hz) for filters H, H1, H2, and H3. The x-axis ranges from 100 Hz to 100 MHz, and the y-axis ranges from -250 dB to 0 dB.

PCI Express 5.0 Base Specification pending final release

Figure 7.1. PCIe Clock Jitter Tool

## 8. Control Registers

### 8.1 I<sup>2</sup>C Interface

To enhance the flexibility and function of the clock synthesizer, an I<sup>2</sup>C interface is provided. Through the I<sup>2</sup>C interface, various device functions, such as individual clock output buffers, are individually enabled or disabled. The registers associated with the I<sup>2</sup>C interface initialize to their default setting at power-up. The use of this interface is optional. Clock device register changes are normally made at system initialization, if any are required.

### 8.2 Block Read/Write

The clock driver I<sup>2</sup>C protocol accepts block write and block read operations from the controller. For block write/read operation, access the bytes in sequential order from lowest to highest (most significant bit first) with the ability to stop after any complete byte is transferred. The block write and block read protocol is outlined in [Table 8.2 Block Read and Block Write Protocol on page 32](#).

### 8.3 Block Read

After the slave address is sent with the R/W condition bit set, the command byte is sent with the MSB = 0. The slave acknowledges the register index in the command byte. The master sends a repeat start function. After the slave acknowledges this, the slave sends the number of bytes it wants to transfer (>0 and ≤7). The master acknowledges each byte except the last and sends a stop condition.

Figure 8.1. Block Read Protocol

### 8.4 Block Write

After the slave address is sent with the R/W condition bit not set, the command byte is sent with the MSB = 0. The lower seven bits indicate the register at which to start the transfer. If the command byte is 00h, the slave device will be compatible with existing block mode slave devices. The next byte of a block write must be the count of bytes that the master will transfer to the slave device. The byte count must be greater than zero and less than 7. Following this byte are the data bytes to be transferred to the slave device. The slave device always acknowledges each byte received. The transfer is terminated after the slave sends the Ack and the master sends a stop function.

Figure 8.2. Block Write Protocol

### 8.5 Byte Read/Write

Reading or writing a register in an I<sup>2</sup>C slave device in byte mode always involves specifying the register number. Refer to [Table 8.3 Byte Read and Byte Write Protocol on page 33](#) for byte read and byte write protocol.

### 8.6 Byte Read

The standard byte read is as shown in the figure below. It is an extension of the byte write. The write start condition is repeated; then, the slave device starts sending data, and the master acknowledges it until the last byte is sent. The master terminates the transfer with a Nack, then a stop condition. For byte operation, the MSB bit of the command byte must be set. For block operations, the MSB bit must be set low. If the bit is not set low, the next byte must be the byte transfer count.

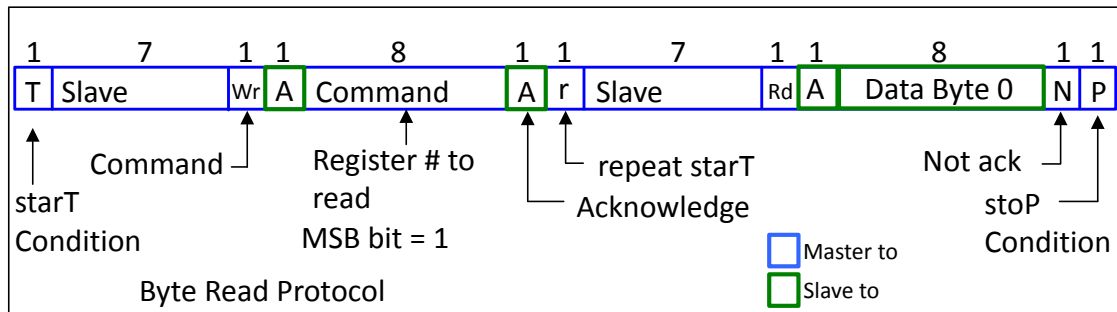

Figure 8.3. Byte Read Protocol

### 8.7 Byte Write

The figure below illustrates a simple, typical byte write. For byte operation, the MSB bit of the command byte must be set high. For block operations, the MSB bit must be set. If the bit is not set, the next byte must be the byte transfer count. The count can be between 1 and 32. It is not allowed to be zero or to exceed 32.

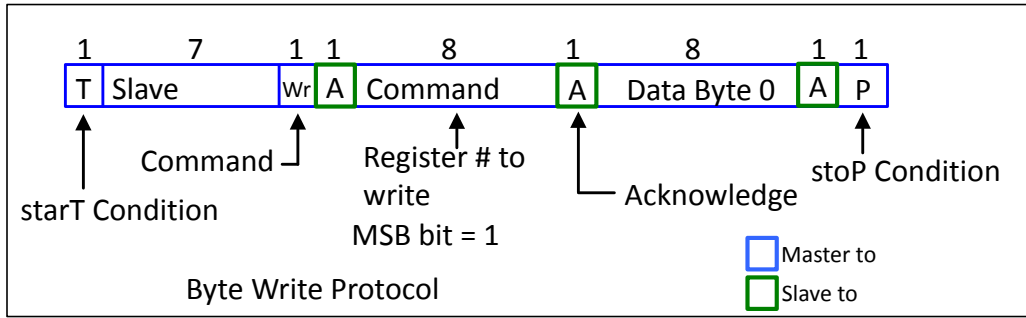

Figure 8.4. Byte Write Protocol

## 8.8 Data Protocol

The clock driver I<sup>2</sup>C protocol accepts byte write, byte read, block write, and block read operations from the controller. For block write/read operations, the system controller can access the bytes in sequential order from lowest to highest (most significant bit first) with the ability to stop after any complete byte is transferred. For byte write and byte read operations, the system controller can access individually indexed bytes. The block write and block read protocol is outlined in [Table 8.2 Block Read and Block Write Protocol on page 32](#) while [Table 8.3 Byte Read and Byte Write Protocol on page 33](#) outlines byte write and byte read protocol. SA is the address select for I<sup>2</sup>C. When the part is powered up, SA will be latched to select the I<sup>2</sup>C address.

**Table 8.1. SA State on First Application of PWRDNb**

Description	SA	Address
State of SA on first deassertion of PWRDNb	0	1101001
	1	1101010

## 9. Pin Descriptions

### 9.1 Si52212 Pin Descriptions

Figure 9.1. 64-Pin QFN

Table 9.1. Si52212 64-Pin QFN Descriptions

Pin #	Name	Type	Description
1	VDDA	PWR	Analog Power Supply.
2	GNDA	PWR	Analog Ground.
3	NC		No connect.
4	GND	GND	Ground.
5	SS_EN	I	Spread spectrum enable pin. 0 = -0.25% spread, mid= Off, 1= -0.5% spread (This pin has an internal 100 kΩ pull-up).
6	PWRGD/ PWRDNb	I, PU	Active low input pin asserts power down (PDb) and disables all outputs (This pin has an internal 100 kΩ pull-up). Refer also to settings of Byte 2, Bit2 and Bit3 for REF. Settings for Bit3 (REF_OE) will take precedence for REF.
7	GND	GND	Ground.
8	XIN/CLKIN	I	25.00 MHz crystal input or 25 MHz Clock Input.
9	XOUT	O	25.00 MHz crystal output. Float XOUT if using only CLKIN (Clock input).
10	VDDX	PWR	Power supply for crystal.
11	VDDR	PWR	Power supply for REF output.
12	REF /SA	O/I	REF = 25 MHz LVCMOS output. SA = Address select for I <sup>2</sup> C. When part is powered up, SA will be latched to select the I <sup>2</sup> C address. Refer to <a href="#">Table 8.1 SA State on First Application of PWRDNb on page 32</a> . Refer also to <a href="#">5.14 REF/SA Pin for termination</a> . (This pin has an internal 60 kΩ pull-up.)

Pin #	Name	Type	Description
13	VSSR	GND	Ground.
14	SDA	I/O	I <sup>2</sup> C compatible SDATA.
15	SCLK	I	I <sup>2</sup> C compatible SCLOCK.
16	FS	I	Frequency select pin. 0 = 100 MHz, mid = 200 MHz, 1 = 133 MHz. (This pin has an internal 100 kΩ pull-down.)
17	DIFF_0	O, DIF	0.7 V, 100 MHz differential clock.
18	DIFF_0b	O, DIF	0.7 V, 100 MHz differential clock.
19	OE_0b	I, PD	Output enable for DIFF_0 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
20	OE_1b	I, PD	Output enable for DIFF_1 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
21	DIFF_1	O, DIF	0.7 V, 100 MHz differential clock.
22	DIFF_1b	O, DIF	0.7 V, 100 MHz differential clock.
23	GND	GND	Ground.
24	VDD	PWR	Power supply.
25	VDD_IO	PWR	Output power supply.
26	DIFF_2	O, DIF	0.7 V, 100 MHz differential clock.
27	DIFF_2b	O, DIF	0.7 V, 100 MHz differential clock.
28	OE_2b	I, PD	Output enable for DIFF_2 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.
29	OE_3b	I, PD	Output enable for DIFF_3 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.
30	DIFF_3	O, DIF	0.7 V, 100 MHz differential clock.
31	DIFF_3b	O, DIF	0.7 V, 100 MHz differential clock.
32	VDD_IO	PWR	Output power supply.
33	GND	GND	Ground.
34	DIFF_4	O, DIF	0.7 V, 100 MHz differential clock.
35	DIFF_4b	O, DIF	0.7 V, 100 MHz differential clock.
36	OE_4b	I, PD	Output enable for DIFF_4 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.
37	OE_5b	I, PD	Output enable for DIFF_5 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.
38	DIFF_5	O, DIF	0.7 V, 100 MHz differential clock.
39	DIFF_5b	O, DIF	0.7 V, 100 MHz differential clock.
40	VDD	PWR	Power supply.
41	GND	GND	Ground.
42	DIFF_6	O, DIF	0.7 V, 100 MHz differential clock.
43	DIFF_6b	O, DIF	0.7 V, 100 MHz differential clock.
44	OE_6b	I, PD	Output enable for DIFF_6 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.

Pin #	Name	Type	Description
45	OE_7b	I, PD	Output enable for DIFF_7 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.
46	DIFF_7	O, DIF	0.7 V, 100 MHz differential clock.
47	DIFF_7b	O, DIF	0.7 V, 100 MHz differential clock.
48	GND	GND	Ground.
49	VDD_IO	PWR	Output power supply.
50	DIFF_8	O, DIF	0.7 V, 100 MHz differential clock.
51	DIFF_8b	O, DIF	0.7 V, 100 MHz differential clock
52	OE_8b	I, PD	Output enable for DIFF_8 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.
53	OE_9b	I, PD	Output enable for DIFF_9 pair (This pin has an internal 100 kΩ pull-down). 0 = Enable outputs; 1 = Disable outputs.
54	DIFF_9	O, DIF	0.7 V, 100 MHz differential clock.
55	DIFF_9b	O, DIF	0.7 V, 100 MHz differential clock.
56	VDD_IO	PWR	Output power supply.
57	VDD	PWR	Power supply.
58	GND	GND	Ground.
59	DIFF_10	O, DIF	0.7 V, 100 MHz differential clock.
60	DIFF_10b	O, DIF	0.7 V, 100 MHz differential clock.
61	OE_10b	I, PD	Output enable for DIFF_10 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
62	OE_11b	I, PD	Output enable for DIFF_11 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
63	DIFF_11	O, DIF	0.7 V, 100 MHz differential clock.
64	DIFF_11b	O, DIF	0.7 V, 100 MHz differential clock
	GND PAD	GND	Ground pad. This pad provides an electrical and thermal connection to ground and must be connected for proper operation. Use as many vias as practical, and keep the via length to an internal ground plane as short as possible.

## 9.2 Si52208 Pin Descriptions

Figure 9.2. 48-pin QFN

Pin	Name	Type	Description
1	VDDA	PWR	Analog Power Supply.
2	GNDA	PWR	Analog Ground.
3	SS_EN	I	Spread spectrum enable pin. 0 = –0.25% spread, mid= Off, 1 = –0.5% spread (This pin has an internal 100 kΩ pull-up).
4	PWRGD/PWRDNb	I, PU	Active low input pin asserts power down (PDb) and disables all outputs. (This pin has an internal 100 kΩ pull-up). Refer also to settings of Byte 2, Bit2 and Bit3 for REF. Settings for Bit3 (REF_OE) will take precedence for REF.
5	XIN/CLKIN	I	25.00 MHz crystal input or 25 MHz Clock Input.
6	XOUT	O	25.00 MHz crystal output. Float XOUT if using only CLKIN (Clock input).
7	VDDX	PWR	Power supply for crystal.
8	VDDR	PWR	Power supply for REF output.
9	REF /SA	O/I	REF = 25 MHz LVCMOS output. SA = Address select for I <sup>2</sup> C. When part is powered up, SA will be latched to select the I <sup>2</sup> C address. Refer to <a href="#">Table 8.1 SA State on First Application of PWRDNb on page 32</a> . Refer also to <a href="#">5.14 REF/SA Pin</a> for termination. (This pin has an internal 60 kΩ pull-up.)
10	VSSR	GND	Power supply for crystal.
11	SDA	I/O	I <sup>2</sup> C compatible SDATA.
12	SCLK	I	I <sup>2</sup> C compatible SCLOCK.

Pin	Name	Type	Description
13	FS	I	Frequency select pin. 0 = 100 MHz, mid = 200 MHz, 1 = 133 MHz (This pin has an internal 100 kΩ pull-down.)
14	NC	NC	No connect.
15	DIFF_0	O, DIF	0.7 V, 100 MHz differential clock.
16	DIFF_0b	O, DIF	0.7 V, 100 MHz differential clock.
17	OE_0b	I, PD	Output enable for DIFF_0 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
18	OE_1b	I, PD	Output enable for DIFF_1 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
19	DIFF_1	O, DIF	0.7 V, 100 MHz differential clock.
20	DIFF_1b	O, DIF	0.7 V, 100 MHz differential clock
21	VDD	PWR	Power supply.
22	VDD_IO	PWR	Output power supply.
23	DIFF_2	O, DIF	0.7 V, 100 MHz differential clock.
24	DIFF_2b	O, DIF	0.7 V, 100 MHz differential clock.
25	OE_2b	I, PD	Output enable for DIFF_2 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
26	VDD_IO	PWR	Output power supply.
27	NC	NC	No connect.
28	OE_3b	I, PD	Output enable for DIFF_3 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
29	DIFF_3	O, DIF	0.7 V, 100 MHz differential clock.
30	DIFF_3b	O, DIF	0.7 V, 100 MHz differential clock.
31	VDD	PWR	Power supply.
32	DIFF_4	O, DIF	0.7 V, 100 MHz differential clock.
33	DIFF_4b	O, DIF	0.7 V, 100 MHz differential clock.
34	OE_4b	I, PD	Output enable for DIFF_4 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
35	NC	NC	No connect.
36	VDD_IO	PWR	Output power supply.
37	DIFF_5	O, DIF	0.7 V, 100 MHz differential clock.
38	DIFF_5b	O, DIF	0.7 V, 100 MHz differential clock.
39	OE_5b	I, PD	Output enable for DIFF_5 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
40	NC	NC	No connect.
41	VDD_IO	PWR	Output power supply.
42	VDD	PWR	Power supply.
43	DIFF_6	O, DIF	0.7 V, 100 MHz differential clock.
44	DIFF_6b	O, DIF	0.7 V, 100 MHz differential clock.

Pin	Name	Type	Description
45	OE_6b	I, PD	Output enable for DIFF_6 pair. (This pin has an internal 100 k $\Omega$ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
46	OE_7b	I, PD	Output enable for DIFF_7 pair. (This pin has an internal 100 k $\Omega$ pull-down.) 0 = Enable outputs; 1 = Disable outputs.
47	DIFF_7	O, DIF	0.7 V, 100 MHz differential clock.
48	DIFF_7b	O, DIF	0.7 V, 100 MHz differential clock.
	GND PAD	GND	Ground pad. This pad provides an electrical and thermal connection to ground and must be connected for proper operation. Use as many vias as practical, and keep the via length to an internal ground plane as short as possible.

## 9.3 Si52204 Pin Descriptions

Figure 9.3. 32-pin QFN

Table 9.2. Si52204 32-pin QFN Descriptions

Pin #	Name	Type	Description
1	SS_EN	I	Spread spectrum enable pin. 0 = –0.25% spread; mid = Off; 1 = –0.5% spread. (This pin has an internal 100 kΩ pull-up.)
2	PWRGD/ PWRDNb	I, PU	Active low input pin asserts power down (PDb) and disables all outputs. (This pin has an internal 100 kΩ pull-up.) Refer also to settings of Byte 2, Bit2 and Bit3 for REF. Settings for Bit3 (REF_OE) will take precedence for REF.
3	XIN/CLKIN	I	25.00 MHz crystal input or 25 MHz Clock Input.
4	XOUT	O	25.00 MHz crystal output. Float XOUT if using only CLKIN (Clock input).
5	VDDX	PWR	Power supply for crystal
6	VDDR	PWR	Power supply for REF output
7	REF /SA	O/I	REF = 25 MHz LVCMOS output. SA = Address select for I <sup>2</sup> C. When part is powered up, SA will be latched to select the I <sup>2</sup> C address. Refer to <a href="#">Table 8.1 SA State on First Application of PWRDNb on page 32</a> . Refer also to <a href="#">5.14 REF/SA Pin for termination</a> . (This pin has an internal 60 kΩ pull-up.)
8	VSSR	GND	Ground
9	SDA	I/O	I <sup>2</sup> C compatible SDATA
10	SCLK	I	I <sup>2</sup> C compatible SCLOCK
11	FS	I	Frequency select pin. 0 = 100 MHz; mid = 200 MHz; 1 = 133 MHz. (This pin has an internal 100 kΩ pull-down.)
12	DIFF_0	O, DIF	0.7 V, 100 MHz differential clock
13	DIFF_0b	O, DIF	0.7 V, 100 MHz differential clock
14	OE_0b	I, PD	Output enable for DIFF_0 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs
15	VDD_IO	PWR	Output power supply
16	OE_1b	I, PD	Output enable for DIFF_1 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs
17	DIFF_1	O, DIF	0.7 V, 100 MHz differential clock

Pin #	Name	Type	Description
18	DIFF_1b	O, DIF	0.7 V, 100 MHz differential clock
19	VDD	PWR	Power supply
20	NC	NC	No connect
21	DIFF_2	O, DIF	0.7 V, 100 MHz differential clock
22	DIFF_2b	O, DIF	0.7 V, 100 MHz differential clock
23	OE_2b	I, PD	Output enable for DIFF_2 pair. (This pin has an internal 100 k $\Omega$ pull-down.) 0 = Enable outputs; 1 = Disable outputs
24	VDD_IO	PWR	Output power supply
25	DIFF_3	O, DIF	0.7 V, 100 MHz differential clock
26	DIFF_3b	O, DIF	0.7 V, 100 MHz differential clock
27	OE_3b	I, PD	Output enable for DIFF_3 pair. (This pin has an internal 100 k $\Omega$ pull-down.) 0 = Enable outputs; 1 = Disable outputs
28	NC	NC	No connect
29	VDD	PWR	Power supply
30	NC	NC	No connect
31	VDDA	PWR	Analog Power Supply
32	GNDA	PWR	Analog Ground
	GND PAD	GND	Ground pad. This pad provides an electrical and thermal connection to ground and must be connected for proper operation. Use as many vias as practical, and keep the via length to an internal ground plane as short as possible.

## 9.4 Si52202 Pin Descriptions

Figure 9.4. 20-pin QFN

Table 9.3. Si52202 20-pin QFN Descriptions<sup>1</sup>

Pin #	Name	Type	Description
1	PWRGD/ PWRDNb	I, PU	Active low input pin asserts power down (PDb) and disables all outputs (This pin has an internal pull-up).
2	XIN/CLKIN	I	25.00 MHz crystal input or 25 MHz Clock Input.
3	XOUT	O	25.00 MHz crystal output. Float XOUT if using only CLKIN (Clock input).
4	VDDX	PWR	Power supply for crystal
5	VSSR	GND	Ground
6	SDA	I/O	I <sup>2</sup> C compatible SDATA
7	SCLK	I	I <sup>2</sup> C compatible SCLOCK
8	SS_EN	I	Spread spectrum enable pin. 0 = –0.25% spread; mid = Off; 1 = –0.5% spread. (This pin has an internal 100 kΩ pull-up.)
9	GND	GND	Ground
10	VDD	PWR	Power supply
11	GND	GND	Ground
12	DIFF_0	O, DIF	0.7 V, 100 MHz differential clock
13	DIFF_0b	O, DIF	0.7 V, 100 MHz differential clock
14	OE_0b	I, PD	Output enable for DIFF_0 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs
15	VDD_IO	PWR	Output power supply
16	OE_1b	I, PD	Output enable for DIFF_1 pair. (This pin has an internal 100 kΩ pull-down.) 0 = Enable outputs; 1 = Disable outputs
17	DIFF_1	O, DIF	0.7 V, 100 MHz differential clock
18	DIFF_1b	O, DIF	0.7 V, 100 MHz differential clock
19	VDDA	PWR	Analog Power Supply

Pin #	Name	Type	Description
20	GND	GND	Ground
	GND PAD	GND	Ground pad. This pad provides an electrical and thermal connection to ground and must be connected for proper operation. Use as many vias as practical, and keep the via length to an internal ground plane as short as possible.

**Note:**

1. Contact factory for 133/200M output frequencies.

## 10. Packaging

### 10.1 Si52212 Package

The figure below illustrates the package details for the Si52212 in a 64-Lead 9 x 9 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.1. 64L 9 x 9 mm QFN Package Diagram

Table 10.1. Package Diagram Dimensions

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05
b	0.18	0.25	0.30
D	9.00 BSC		
D2	5.10	5.20	5.30
e	0.50 BSC		
E	9.00 BSC		
E2	5.10	5.20	5.30
L	0.30	0.40	0.50
aaa	0.15		
bbb	0.10		
ccc	0.08		
ddd	0.10		
eee	0.05		

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to JEDEC Outline MO-220.
4. Recommended card reflow profile is per JEDEC/IPC J-STD-020D specification for Small Body Components.

## 10.2 Si52212 Land Pattern

The following figure illustrates the land pattern details for the Si52212 in a 64-Lead 9 x 9 mm QFN package. The table lists the values for the dimensions shown in the illustration.

**Figure 10.2. 64L 9 x 9 mm QFN Land Pattern**

**Table 10.2. PCB Land Pattern Dimensions**

Dimension	mm
C1	8.90
C2	8.90
E	0.50
X1	0.30
Y1	0.85
X2	5.30
Y2	5.30

### Notes:

#### General

1. All dimensions shown are in millimeters (mm).
2. This Land Pattern Design is based on the IPC-7351 guidelines.
3. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

#### Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 μm minimum, all the way around the pad.

#### Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 1:1 for all pads.
4. A 3x3 array of 1.25 mm square openings on a 1.80 mm pitch should be used for the center ground pad.

#### Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

### 10.3 Si52208 Package

The figure below illustrates the package details for the Si52208 in a 48-Lead 6 x 6 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.3. 48L 6 x 6 mm QFN Package Diagram

Table 10.3. Package Diagram Dimensions

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05
b	0.15	0.20	0.25
D		6.00 BSC	
D2	3.5	3.6	3.7
e		0.40 BSC	
E		6.00 BSC	
E2	3.5	3.6	3.7
L	0.30	0.40	0.50
aaa		0.10	
bbb		0.10	
ccc		0.10	
ddd		0.05	
eee		0.08	

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to JEDEC Outline MO-220.
4. Recommended card reflow profile is per JEDEC/IPC J-STD-020 specification for Small Body Components.

## 10.4 Si52208 Land Pattern

The figure below illustrates the land pattern details for the Si52208 in a 48-Lead, 6 x 6 mm QFN package. The table lists the values for the dimensions shown in the illustration.

**Figure 10.4. 48L 6 x 6 mm QFN Land Pattern**

**Table 10.4. PCB Land Pattern Dimensions**

Dimension	mm
C1	5.90
C2	5.90
X1	0.20
X2	3.60
Y1	0.85
Y2	3.60
e	0.40 BSC

### Notes:

#### General

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

#### Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 μm minimum, all the way around the pad.

#### Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
4. A 3x3 array of 0.90 mm square openings on 1.15mm pitch should be used for the center ground pad.

#### Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

### 10.5 Si52204 Package

The figure below illustrates the package details for the Si52204 in a 32-Lead, 5 x 5 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.5. 32L 5 x 5 mm QFN Package Diagram

**Table 10.5. Package Diagram Dimensions**

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05
A3	0.20 REF		
b	0.18	0.25	0.30

aaa	0.15		
bbb	0.10		
ccc	0.10		
ddd	0.05		
eee	0.08		
fff	0.10		

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This drawing conforms to the JEDEC Solid State Outline MO-220, Variation VKKD-4.
4. Recommended card reflow profile is per JEDEC/IPC J-STD-020 specification for Small Body Components.

## 10.6 Si52204 Land Pattern

The figure below illustrates the land pattern details for the Si52204 in a 32-Lead, 5 x 5 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.6. 32L 5 x 5 mm QFN Land Pattern

Table 10.6. PCB Land Pattern Dimensions

Dimension	mm
S1	4.01
S	4.01
L1	3.50
W1	3.50
e	0.50
W	0.26
L	0.86

### Notes:

#### General

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. This Land Pattern Design is based on IPC-7351 guidelines.

#### Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu$ m minimum, all the way around the pad.

#### Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125mm (5 mils).
3. The ratio of stencil aperture to land pad size can be 1:1 for all perimeter pads.
4. A 3x3 array of 0.85 mm square openings on 1.00 mm pitch can be used for the center ground pad.

#### Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

### 10.7 Si52202 Package

The figure below illustrates the package details for the Si52202 in a 20-Lead, 3 x 3 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.7. 20L 3 x 3 mm QFN Package Diagram

**Table 10.7. Package Diagram Dimensions**

Dimension	Min	Nom	Max
A	0.80	0.85	0.90
A1	0.00	0.02	0.05
A3	—	0.65	—
A3	0.20 REF

ccc	0.10		
ddd	0.05		
eee	0.08		
fff	0.10		

**Note:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. The drawing complies with JEDEC MO-220.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## 10.8 Si52202 Land Pattern

The figure below illustrates the land pattern details for the Si52202 in a 20-Lead, 3 x 3 mm QFN package. The table lists the values for the dimensions shown in the illustration.

Figure 10.8. 20L 3 x 3 mm QFN Land Pattern

Table 10.8. PCB Land Pattern Dimensions

Dimension	mm
C1	3.10
C2	3.10
X1	0.20
X2	1.90
Y1	0.70
Y2	1.90
e	0.40 BSC

### Notes:

#### General

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

#### Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu\text{m}$  minimum, all the way around the pad.

#### Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
4. A 3x3 array of 0.90 mm square openings on 1.15 mm pitch should be used for the center ground pad.

#### Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## 10.9 Si52212 Top Markings

Line	Characters	Description
1	52208	Device part number
2	A0xA	Device part number x = 1 = Internal 100 $\Omega$ impedance matching x = 2 = Internal 85 $\Omega$ impedance matching
3	TTTTTT	TTTTTT = Manufacturing trace code
4	YYWW	YY = Assembly year WW = Assembly work week

## 10.11 Si52204 Top Markings

Figure 10.11. Si52204 Top Marking

Table 10.11. Si52204 Top Marking Explanation

Line	Characters	Description
1	52204	Device part number
2	A0xB	Device part number x = 1 = Internal 100 $\Omega$ impedance matching x = 2 = Internal 85 $\Omega$ impedance matching
3	TTTTTT	TTTTTT = Manufacturing trace code
4	YYWW	YY = Assembly year WW = Assembly work week

## 10.12 Si52202 Top Markings

Figure 10.12. Si52202 Top Marking

Table 10.12. Si52202 Top Marking Explanation

Line	Characters	Description
1	5220	Device part number
2	TTTT	TTTT = Manufacturing trace code
3	YWW	Y = Assembly year WW = Assembly work week

## 11. Revision History

### Revision 1.0

March, 2019

- Updated [2. Ordering Guide](#) with new 4-output and 2-output part numbers.
- Updated [4. Electrical Specifications](#).
  - Updated [Table 4.1 DC Electrical Specifications \(VDD = 1.5 V ±5%\)](#) on page 8.
  - Updated [Table 4.2 DC Electrical Specifications \(VDD = 1.8 V ±5%\)](#) on page 11.
  - Updated [Table 4.3 AC Electrical Specifications](#) on page 14.
  - Updated [Table 4.4 PCIe and Intel QPI Jitter Specifications](#) on page 16.
- Added [5.4 Power Supply Filtering Recommendations](#).
- Updated [5.5 PWRGD/PWRDNb \(Power Down\) Pin](#).
- Updated [5.6 PWRDNb \(Power Down\) Assertion](#).
- Updated [5.7 PWRDNb \(Power Down\) Deassertion](#).
- Updated [5.8 OEb Pin](#).
- Updated [5.11 FS Pin](#).
- Added [5.12 SS\\_EN Pin](#).
- Added [5.13 Recommendations for Driving Tri-State Pins](#).
- Added [5.14 REF/SA Pin](#).
- Updated [8.3 Block Read](#).
- Updated [8.4 Block Write](#).
- Updated [8.6 Byte Read](#).
- Updated [8.7 Byte Write](#).
- Updated [8.8 Data Protocol](#).
- Updated [8.9 Register Tables](#).
- Updated [9. Pin Descriptions](#).

### Revision 0.7

September, 2017

- Initial Release.

# SKYWORKS®

## ClockBuilder Pro

Customize Skyworks clock generators, jitter attenuators and network synchronizers with a single tool. With CBPro you can control evaluation boards, access documentation, request a custom part number, export for in-system programming and more!

Information in this document is provided in connection with Skyworks Solutions, Inc. ("Skyworks") products or services. These materials, including the information contained herein, are provided by Skyworks as a service to its customers and may be used for informational purposes only by the customer. Skyworks assumes no responsibility for errors or omissions in these materials or the information contained herein. Skyworks may change its documentation, products, services, specifications or product descriptions at any time, without notice. Skyworks makes no commitment to update the materials or information and shall have no responsibility whatsoever for conflicts, incompatibilities, or other difficulties arising from any future changes.

No license, whether express, implied, by estoppel or otherwise, is granted to any intellectual property rights by this document. Skyworks assumes no liability for any materials, products or information provided hereunder, including the sale, distribution, reproduction or use of Skyworks products, information or materials, except as may be provided in Skyworks' Terms and Conditions of Sale.

THE MATERIALS, PRODUCTS AND INFORMATION ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, WHETHER EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE, INCLUDING FITNESS FOR A PARTICULAR PURPOSE OR USE, MERCHANTABILITY, PERFORMANCE, QUALITY OR NON-INFRINGEMENT OF ANY INTELLECTUAL PROPERTY RIGHT; ALL SUCH WARRANTIES ARE HEREBY EXPRESSLY DISCLAIMED. SKYWORKS DOES NOT WARRANT THE ACCURACY OR COMPLETENESS OF THE INFORMATION, TEXT, GRAPHICS OR OTHER ITEMS CONTAINED WITHIN THESE MATERIALS. SKYWORKS SHALL NOT BE LIABLE FOR ANY DAMAGES, INCLUDING BUT NOT LIMITED TO ANY SPECIAL, INDIRECT, INCIDENTAL, STATUTORY, OR CONSEQUENTIAL DAMAGES, INCLUDING WITHOUT LIMITATION, LOST REVENUES OR LOST PROFITS THAT MAY RESULT FROM THE USE OF THE MATERIALS OR INFORMATION, WHETHER OR NOT THE RECIPIENT OF MATERIALS HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Skyworks products are not intended for use in medical, lifesaving or life-sustaining applications, or other equipment in which the failure of the Skyworks products could lead to personal injury, death, physical or environmental damage. Skyworks customers using or selling Skyworks products for use in such applications do so at their own risk and agree to fully indemnify Skyworks for any damages resulting from such improper use or sale.

Customers are responsible for their products and applications using Skyworks products, which may deviate from published specifications as a result of design defects, errors, or operation of products outside of published parameters or design specifications. Customers should include design and operating safeguards to minimize these and other risks. Skyworks assumes no liability for applications assistance, customer product design, or damage to any equipment resulting from the use of Skyworks products outside of Skyworks' published specifications or parameters.
