Description

The SKY13524-639LF is a single-pole, four-throw (SP4T) switch used for single-ended filter switching in cellular applications. The SKY13524-639LF maintains low insertion loss and high isolation for all switching paths.

Depending on the logic voltage level applied to the control pins (V1 and V2), the RFC pin is connected to one of four switched RF outputs (RF1 to RF4) using a low insertion loss path, while the paths between the RFC pin and the other RF pins are in a high isolation state.

The SKY13524-639LF is manufactured in a compact, 14-pin 1.6 x 1.6 mm, Quad Flat No-Lead (QFN) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Note 1: Bottom ground paddles must be connected to ground.

Functional Description

The SKY13524-639LF includes an internal decoder and internal blocking capacitors on the RF common ports. External DC blocking capacitors are required on the RF1, RF2, RF3, and RF4 ports for proper operation. DC decoupling capacitors may be added on the VDD and control lines if necessary.

Switching is controlled by two control voltage inputs, V1 and V2. Depending on the logic voltage level applied to the control pins, the antenna pin is connected to one of four switched RF outputs.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13524-639LF are provided in Table 2. Electrical specifications are provided in Table 3.

The state of the SKY13524-639LF is determined by the logic shown in Table 4.

Table 2. SKY13524-639LF Absolute Maximum Ratings (Note 1)

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	V _{DD}		3.7	V
Control voltage (V1, V2)	V _{CTL}	-0.5	+3.3	V
RF input power	P _{IN}		+26	dBm
Operating temperature	T _{OP}	-30	+90	°C
Storage temperature	T _{STG}	-55	+150	°C

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.
