Description

The SKY16601-555LF is a fully integrated PIN diode low-threshold limiter module in a surface-mount package. It is designed for use as a passive receiver protector in wireless or other RF systems for frequencies up to 6 GHz. It features low-insertion loss and low distortion in a single MLP package.

The SKY16601-555LF module is comprised of a PIN limiter diode, an RF choke inductor, and 2 DC blocking caps at the RF ports in a 2-lead MLP package. The small package design reduces printed circuit board area.

The module can operate over the temperature range of $-40\text{ }^{\circ}\text{C}$ to $+85\text{ }^{\circ}\text{C}$.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although these devices are designed to be as robust as possible, Electrostatic Discharge (ESD) can damage them. These devices must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be employed at all times.

Note 1: Recovery time represents the transition time from the high-loss to low-loss state following the removal of high-power input. RF pulse modulation: 1 μs pulse width and 0.1% duty factor.

Note 2: Flat leakage power is defined as the power level after the limiter has fully turned on and the output pulse reaches a constant level.

Theory of Operation

A limiter prevents overload by allowing RF signals that are below a certain threshold to pass through, but larger signals exceeding the threshold are increasingly attenuated. The SKY16601-555LF is a single-stage limiter module, comprised of a shunt-connected PIN diode that biases itself in the presence of large signals. The PIN diode performs the dual functions of rectifying the incoming RF signal and then using the rectified current to bias itself to a low effective series resistance. An inductor completes the loop for the bias current flow while presenting a high impedance path to RF. The SKY16601-555LF includes input/output DC blocking capacitors needed for most applications.

Typical Performance Characteristics ($T_{OP}=25^{\circ}C$, Characteristic Impedance = 50Ω)

Typical performance characteristics are illustrated in Figures 3 and 4. Figures 5 and 6 show the power derating curves for the limiter module. In Figure 5, the temperature is referenced to the bottom of the MLP package. The power derating curve with the temperature referenced to the bottom of the printed circuit board is shown in Figure 6.
