

QUADRUPLE OPERATIONAL AMPLIFIERS

- **Wide Range of Supply Voltages:**
Single Supply...3V to 30V
(LM2902 and LM2902Q 3V to 26V), or Dual Supplies
- **Low Supply Current Drain Independent of Supply Voltage ...0.8mA Typ**
- **Common-Mode Input Voltage Range Includes Ground Allowing Direct Sensing Near Ground**
- **Low Input Bias and Offset Parameters:**
Input Offset Voltage ... 3mV Typ
A Versions... 2 mV Typ
Input Offset Current ... 2nA Typ
Input Bias Current ... 20nA Typ
A Versions ... 15nA Typ
- **Differential Input Voltage Range Equal to Maximum-Rated Supply Voltage... 32V (26V for LM2902 and LM2902Q)**
- **Open-Loop Differential Voltage Amplification ... 100V/mV Typ**
- **Internal Frequency Compensation**

Description

These devices consist of four independent high-gain frequency-compensated operational amplifiers that are designed specifically to operate from a single supply over a wide range of voltages. Operation from split supplies is also possible when the difference between the two supplies is 3V to 30V (for the LM2902 and LM2902Q, 3V to 26V) and Vcc is at least 1.5V more positive than the input common-mode voltage. The low supply current drain is independent of the magnitude of the supply voltage.

Applications include transducer amplifiers, dc amplification blocks, and all the conventional operational amplifier circuits that now can be more easily implemented in single-supply-voltage systems. For example, the LM124 can be operated directly from the standard 5-V supply that is used in digital systems and easily provides the required interface electronics without requiring additional ± 15 -V supplies.

The LM2902Q is manufactured to demanding automotive requirements.

The LM124 and LM124A are characterized for operation over the full military temperature range of -55 to 125 . The LM224 and LM224A are characterized for operation from -25 to 85 . The LM324 and LM324A are characterized for operation from 0 to 70 . The LM2902 and LM2902Q are characterized for operation from -40 to 125 .

LM324Y chip information

This chip, when properly assembled, displays characteristics similar to the LM324. Thermal compression or ultrasonic bonding may be used on the doped-aluminum bonding pads. Chips may be mounted with conductive epoxy or a gold-silicon perform.

CHIP THICKNESS: 15 TYPICAL

BONDING PADS: 4 × 4 MINIMUM

$T_{jmax} = 150^{\circ}C$

TOLERANCES ARE $\pm 10\%$.

ALL DIMENSIONS ARE IN MILS.

PIN (11) IS INTERNALLY CONNECTED TO BACKSIDE OF CHIP.

LM124 -- LM2902Q

Absolute maximum ratings over operating free-air temperature range (unless otherwise noted) †

Lead temperature 1,6mm (1/16 inch) from case for 60 seconds	J or W package	300	300
Lead temperature 1,6mm (1/16 inch) from case for 10 seconds	D,DB,N, or PW package	260	260

†Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES:

1. All voltage values (except differential voltages and V_{CC} specified for the measurement of I_{OS}) are with respect to the network GND.
2. Differential voltages are at $IN+$ with respect to $IN-$.
3. Short circuits from outputs to V_{CC} can cause excessive heating and eventual destruction.
