

Battery Protection IC

General Description

The SL435 battery protection IC is designed to protect lithium-ion/polymer battery from damage or degrading the lifetime due to overcharge, overdischarge, and/or overcurrent for one-cell lithium-ion/polymer battery powered systems, such as cellular phones.

The ultra-small package and less required external components make it ideal to integrate the SL435 into the limited space of battery pack. The accurate $\pm 25\text{mV}$ overcharging detection voltage ensures safe and full utilization charging. The very low standby current drains little current from the cell while in storage.

Features

- **Reduction in Board Size due to Miniature Package SOT-23-6.**
- **Ultra-Low Quiescent Current at $3\ \mu\text{A}$ ($V_{\text{CC}}=3.9\text{V}$).**
- **Auto recovery**
- **0v charging**
- **Precision Overcharge Protection Voltage $4.425\text{V} \pm 25\text{mV}$ for the SL435**
- **Load Detection Function during Overcharge Mode.**
- **Two Detection Levels for Overcurrent Protection.**
- **Delay times are generated by internal circuits. No external capacitors required.**
