

Description

The SL54 Series is a high input voltage, low quiescent current, low-dropout linear regulator able to provide 300mA load current The LDO features very fast response against line voltage transient and load current transient, and ensures no overshoot voltage during the LDO start up and short circuit recovery.

The device features integrated short-circuit and thermal shutdown protection.

Features

Low Quiescent Current: 2.1uA

High Input Voltage Rating: Up to 55V

Maximum Output Current: 350mA

Low Dropout: 350mV @ 100mA

High PSRR: 85dB at 1KHz

Fixed Output Voltages: 1.8V,2.8V,3V,3.3V,5V

Fast Transient Response

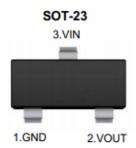

Current Limiting Protection

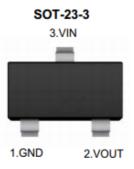

Thermal Shutdown Protection

 Available Packages: SOT-23、SOT-23-3、SOT-89 SOT-23-5 and DFN1x1-4L Packages

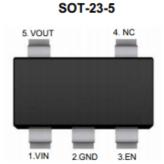

Applications

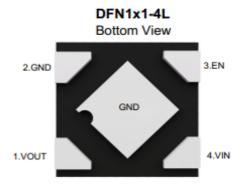

- Battery-Powered Equipment
- Smoke Detector and Sensor
- Micro Controller Applications

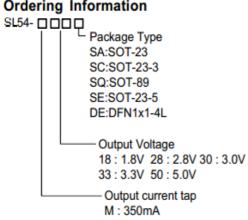

Functional Pin Description

Pin Name	Pin Function	
EN	Chip Enable (Active High). Note that this pin is high impedance	
NC	NO Connected	
GND	Ground	
VOUT	Output Voltage	
VIN	Power Input Voltage	

Ordering Information

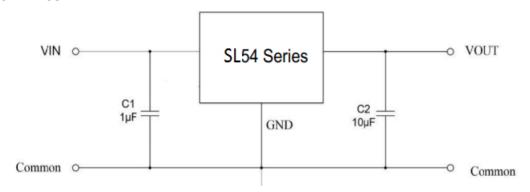

Marking Code Note

Output Voltage	Package	Marking Code
1.8V~5V	SOT-23	54XX
1.8V~5V	SOT-23-3	54XXC
1.8V~5V	SOT-23-5	54XXE
1.8V~5V	SOT-89	54XX
1.8V~5V	DFN1x1-4L	54XX

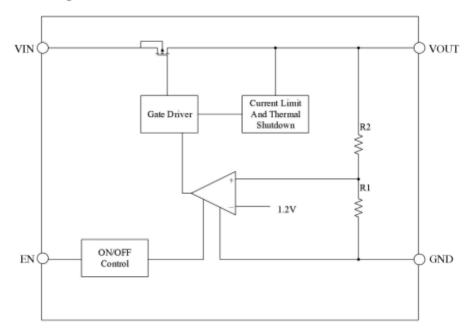

Note . XX : Output Voltage e.g . 30:3.0V 33:3.3V

Functional Description

Input Capacitor

A 1µF ceramic capacitor is recommended to connect between VIN and GND pins to decouple input power supply glitch and noise. The amount of the capacitance may be increased without limit. This input capacitor must be located as close as possible to the device to assure input stability and less noise. For PCB layout, a wide copper trace is required for both VIN and GND.

Output Capacitor

An output capacitor is required for the stability of the LDO. The recommended minimum output capacitance is $1\mu F$, ceramic capacitor is recommended, and temperature characteristics are X7R or X5R. Higher capacitance values help to improve load/line transient response. The output capacitance may be increased to keep low undershoot/overshoot. Place output capacitor as close as possible to VOUT and GND pins.

EN Pin Operation

The SL54 Series is turned on by setting the EN pin to "H". Since the EN pin is neither pulled down nor pulled up internally, do not set it in floating status. When the EN pin is not used, connect the EN pin with VIN to keep the LDO in operating mode.

Current Limit and Short Circuit Protection

When output current at VOUT pin is higher than current limit threshold or the VOUT pin is direct short to GND, the current limit protection will be triggered and clamp the output current at a pre-designed level to prevent over-current and thermal damage.

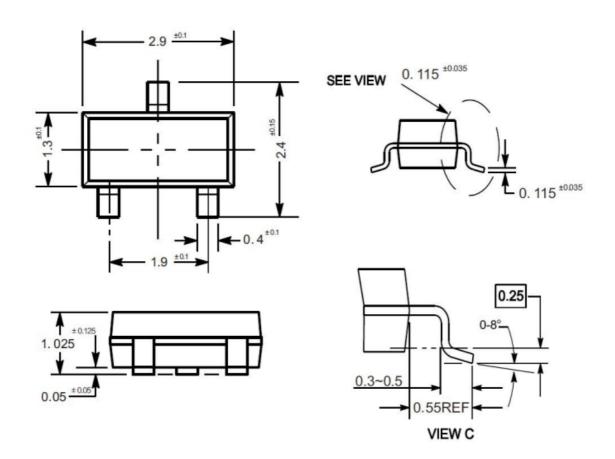

Thermal Protection

The SL54 Series has internal thermal sense and protection circuits. When excessive power dissipation happens on the device, such as short circuit at the output pin or very heavy load current with a large voltage drop across the device, the internal thermal protection circuit will be triggered, and it will shut down the power MOSFET to prevent the LDO from damage. As soon as excessive thermal condition is removed and the temperature of the device drops down, the thermal protection circuit will lease the control of the power MOSFET, and the LDO device goes to normal operation.
