## 75 Watt Multiple Output Global Performance Switchers

## FEATURES:

- Cost-effective multiple output power source
- Universal input 90-264 Vac
- 7.00"x 4.25"x 1.30" (Meets 1U height)
- 2-year warranty
- Conducted EMI exceeds FCC Class B and CISPR 22 Class B (Commercial models) and CISPR 11 Class B (Medical models)
- Complies with EN61000-3-2 Class A
- Also available in single output versions
- Commercial UL1950 3rd Edition, CSA22.2 No. 950 and EN60950-1 approvals
- Medical Approved to UL2601-1, CSA22.2 No. 601.1-M90, and IEC/EN60601-1
- RoHS Compliant Model Available (G suffix)

## SPECIFICATIONS

## Ac Input

90-264 Vac, 47-63 Hz single phase.

## Input Current

Maximum input current at $120 \mathrm{Vac}, 60 \mathrm{~Hz}$ with full rated output load not to exceed 2.3 A.

## Output Power

Normal continuous output power is 75 W for unrestricted natural convection cooling or 110 W with 26 cfm airflow. During peak load conditions output regulation may exceed total regulation and noise limits.

Output Regulation
Measured by $\pm 40 \%$ load change from $60 \%$ rated load with all other outputs at 60\% rated load and input voltage change from minimum to maximum ratings. Output \#1 requires 1A minimum load for proper regulation of other outputs. Initial set tolerance is measured with all outputs at $60 \%$ of full rated load. Output \#2 requires 0.5A minimum load for proper regulation.

Overload Protection
Factory set to begin power limiting at approximately 120 W . Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit.

## Output Noise

$0.5 \% \mathrm{rms}, 1 \% \mathrm{pk}-\mathrm{pk}, 20 \mathrm{MHz}$ bandwidth, differential mode. Measured with noise probe directly across output terminals of the power supply.

## Transient Response

Main Output: $500 \mu \mathrm{Sec}$ typical response time for return to within $0.5 \%$ of final value for a $50 \%$ load step change, $\Delta \mathrm{i} / \Delta \mathrm{t}<0.2 \mathrm{~A} / \mu \mathrm{Sec}$. Maximum voltage deviation is $3.5 \%$.

Overvoltage Protection
Built in on V1 with firing point set per table. OVP firing reduces output \#1 and \#2 to less than $50 \%$ of nominal voltage in 50 ms .
Voltage Adjust
Factory set on standard unit; however, optional potentiometer ("-V" suffix) adjusts voltage from 4.7 V to OVP point ( 6.2 V nominal) on the +5 V output. Note: Output \#1 must not be more than $1 \%$ below nominal to achieve full output voltage range on Output \#2. Output regulation limits in some models may be exceeded when the main output is adjusted beyond $+1 \%$ of nominal voltage. High voltage settings may degrade the reliability of the unit due to excessive power dissipation in some outputs.

## Efficiency

$68 \%-78 \%$ depending on model and load distribution.

## Input Protection

Internal ac fuse provided on all units. Designed to blow only if a catastrophic failure occurs in the unit.

Inrush Current
Inrush limited by internal thermistors. Inrush at 240 Vac , averaged over the first ac half-cycle under cold start conditions will not exceed 37 A .
Hold Up Time
20 ms minimum from loss of ac input power at full load, nominal line ( 120 Vac ).
Temperature Coefficient
$0.03 \% /{ }^{\circ} \mathrm{C}$ typical on all outputs.

## Power Fail

A standard TTL or CMOS compatible output goes low (<0.5 V) 5 ms before output voltage drops more than $4 \%$ below nominal voltage upon loss of ac power. Signal is factory set to trip on 84 to 94 Vac brown-out depending upon incoming line impedance and distortion. Other settings are available through adjustment of built-in potentiometer (consult factory for assistance). Output will stay low for 20 ms minimum.

EMI/EMC Compliance
All models include built-in EMI filtering to meet the following emissions requirements:

| EMI SPECIFICATIONS | COMPLIANCE LEVEL |
| :--- | :--- |
| Conducted Emissions GLC75 | EN55022 Class B; FCC Class B |
| Conducted Emissions GLM75 | EN55011 Class B: FCC Class B |
| Static Discharge | EN61000-4-2, 6 kV contact, 8 kV air |
| RF Field Susceptibility | EN61000-4-3, 3 V/meter |
| Fast Transients/Bursts | EN61000-4-4, 2 kV, 5 kHz |
| Surge Susceptibility |  |
| Line Frequency Harmonics | EN61000-4-5, 1 kV diff., 2 kV com. |
| Commercial Safety <br> All GLC models are approved to UL1950 3rd Edition, CSA22.2 No. 950, and <br> EN60950-1. |  |

Medical Leakage Current
$70 \mu \mathrm{~A} 264 \mathrm{~V}$ @ 50 Hz (normal conditions).

## Medical Safety

GLM models are approved to UL2601-1, CSA22.2 No. 601.1M90, IEC/EN60601-1. CB Report available.

* Add " $G$ " suffix to part number for RoHS compliant model. Contact factory for availability.
A. Rating with unrestricted convection cooling. Total power not to exceed 75 W .
B. Rating with 26 cfm forced-air cooling. Total power not to exceed 110 W .
C. Floating fourth output can be referenced as either positive or negative. Connect pin 12 to Return to provide a positive voltage at Pin 13. Connect pin 13 to Return to provide a negative voltage at Pin 12.
D. To maintain these regulations conditions, the +5 V current must be at least $1 / 5$ of V 2 and not greater than 5 times the V 2 current. Requires +5 V to be adjusted to within $1 \%$ with at least a 1 A load to maintain regulation on this output.

GLC75/GLM75 - MULTIPLE OUTPUT - MECHANICAL SPECIFICATIONS

| ENVIRONMENTAL SPECIFICATIONS | OPERATING | NON-OPERATING |
| :--- | :--- | :--- |
| Temperature (A) | 0 to $50^{\circ}$ | -40 to $+85^{\circ} \mathrm{C}$ |
| Humidity (A) | 0 to $95 \% \mathrm{RH}$ | 0 to $95 \% \mathrm{RH}$ |
| Shock (B) | $20 \mathrm{~g}_{\mathrm{pk}}$ | $40 \mathrm{~g}_{\mathrm{pk}}$ |
| Altitude | -500 to $10,000 \mathrm{ft}$ | -500 to $40,000 \mathrm{ft}$ |
| Vibration (C) | $1.5 \mathrm{~g}_{\mathrm{rms}} 0.003 \mathrm{~g}^{2} / \mathrm{Hz}$ | $5 \mathrm{~g}_{\mathrm{rm}} 0.026 \mathrm{~g}^{2} / \mathrm{Hz}$ |

A. Units should be allowed to warm up/operate under non-condensing conditions before application of power. Derate output current and total output power by $2.5 \%$ per ${ }^{\circ} \mathrm{C}$ above $50^{\circ} \mathrm{C}$.
B. Shock testing-half-sinusoidal, $10 \pm 3 \mathrm{~ms}$ duration, $\pm$ direction, 3 orthogonal axes, total 6 shocks.
C. Random vibration-10 to $2000 \mathrm{~Hz}, 6 \mathrm{~dB} /$ octave roll-off from 350 to $2000 \mathrm{~Hz}, 3$ orthogonal axes. Tested for 10 min ./axis operating and 1 hr./axis non-operating.
