CMD vs Output Curve

To ensure the power supply output voltage and current could be accurately adjusted, please make sure to adjust the output voltage and current > 10% vs. the rated voltage and current. (e.g. for a 24V unit, please adjust the DC output voltage above 2.4V to ensure accuracy; same applies to the output current)

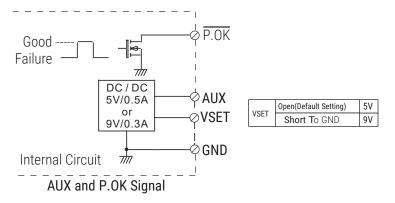

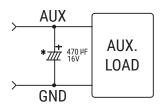

Power OK Signal & Auxiliary Power Setting

*The grounding of "AUX" power and P.OK signal should be connected to "GND" port. If "VO-" is connected as Grounding, make sure to short the GND and VO- ports.

Open drain signal low when PSU turns on. Max. P.OK sink current: 20mA, Max, drain voltage: 40V.

*Place an additional capacitor to have a better performance of auxiliary power operation.

Do NOT exceed 5V/0.5A or 9V/0.3A

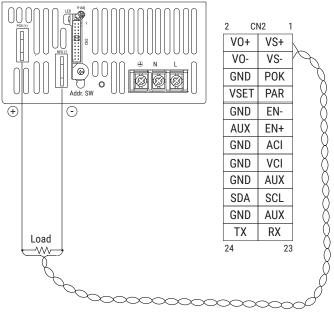

GND shown in above diagram is referring to the GND of CN2, not the Grounding from main power(NEG-)
