## DESCRIPTION

The 74LVX08 is a low voltage CMOS QUAD 2-INPUT AND GATE fabricated with sub-micron silicon gate and double-layer metal wiring $\mathrm{C}^{2}$ MOS technology. It is ideal for low power, battery operated and low noise 3.3 V applications.

The internal circuit is composed of 2 stages including buffer output, which provides high noise immunity and stable output.
Power down protection is provided on all inputs and 0 to 7 V can be accepted on inputs with no regard to the supply voltage.
This device can be used to interface 5 V to 3 V system. It combines high speed performance with the true CMOS low power consumption. All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
