BALF-NRF01E3

## 50 Ω nominal input / conjugate match balun to nRF51822-QFAA /AB/AC and nRF51422-QFAA/AB/AC with integrated filter

Datasheet − production data

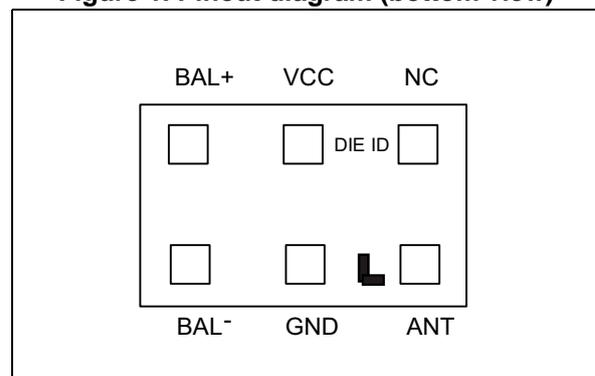

6-terminal LGA

Applications

- 2.45 GHz balun with integrated matching network
- Matching optimized for following chipsets: nRF51822-QFAA/AB/AC and nRF51422-QFAA/AB/AC (see *Figure 19: nRF51822 and nRF51422 compatibility matrix*).

Description

STMicroelectronics BALF-NRF01E3 is an ultraminiature balun. The BALF-NRF01E3 integrates matching network in a monolithic glass substrate. Matching impedance has been customized for the nRF51822-QFAA/AB/AC and nRF51422-QFAA/AB/AC RF transceivers.

It uses STMicroelectronics IPD technology on non-conductive glass substrate which optimizes RF performance.

Features

- Low insertion loss
- Low amplitude imbalance
- Low phase imbalance
- Coated CSP on glass
- Small footprint: < 1.5 mm^2

Benefits

- Very low profile
- High RF performance
- PCB space saving versus discrete solution
- BOM count reduction
- Efficient manufacturability

Figure 10. PCB layout recommendation

Figure 11. Solder-mask recommendation

Solder paste

- 100 µm solder stencil thickness is recommended.

- Halide-free flux qualification ROL0 according to ANSI/J-STD-004.

- "No Clean" solder paste is recommended.

- Offers a high tack force to resist component movement during high speed.

- Solder paste with fine particles: powder particle size is 20-45 µm.

Placement

- Manual positioning is not recommended.

- It is recommended to use the lead recognition capabilities of the placement system, not the outline centering.

- Standard tolerance of ±0.05 mm is recommended.

- 3.5 N placement force is recommended. Too much placement force can lead to squeeze out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.

- To improve the package placement accuracy, a bottom side optical control should be performed with high resolution.

- For assembly, a strong PCB support is recommended (especially on low thickness PCB) during solder paste printing, pick and place and reflow soldering by using optimized tools.
