

## ESDALC6V1-1BU2

Single-line low capacitance Transil™ for bidirectional ESD protection

#### **Features**

- Breakdown voltage V<sub>BR</sub> = 6.1 V min.
- Bidirectional device
- Multiple ESD strike sustainability
- Very low diode capacitance: 5 pF typ. at 0 V
- Low leakage current
- 0201 SMD package size compatible
- Ultra small PCB area: 0.18 mm<sup>2</sup>
- RoHS compliant

#### **Benefits**

- High ESD protection level
- High integration
- Suitable for high density boards
- MSL1

#### Complies with the following standards:

- IEC 61000-4-2 level 4
  - 15 kV (air discharge)
  - 8 kV (contact discharge)

#### **Applications**

Where transient overvoltage protection in ESD sensitive equipment is required, such as:

- Portable multimedia players and accessories
- Notebooks
- Digital cameras and camcorders
- Communication systems
- Cellular phone handsets and accessories

### **Description**

The ESDALC6V1-1BU2 is a bidirectional single line TVS diode designed to protect data lines or other I/O ports against ESD transients.

The device is ideal for applications where both reduced line capacitance and board space saving are required.

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: <a href="https://www.st.com">www.st.com</a>. ECOPACK<sup>®</sup> is an ST trademark.

Note:

Product marking may be rotated by multiples of 90° for assembly plant differentiation. In no case should this product marking be used to orient the component for its placement on a PCB. Only pin 1 mark is to be used for this purpose.

# 4 Recommendation on PCB assembly

### 4.1 Stencil opening design

Figure 15. Recommended stencil windows position

### 4.2 Solder paste

- 1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
- 2. "No clean" solder paste is recommended.
- 3. Offers a high tack force to resist component movement during high speed
- 4. Solder paste with fine particles: powder particle size is 20-45  $\mu m$ .

#### 4.3 **Placement**

- 1. Manual positioning is not recommended.
- 2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
- 3. Standard tolerance of +0.05 mm is recommended.
- 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
- To improve the package placement accuracy, a bottom side optical control should be 5. performed with a high resolution tool.
- For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

#### 4.4 PCB design preference

- To control the solder paste amount, the closed via is recommended instead of open
- 2. The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

#### 4.5 Reflow profile

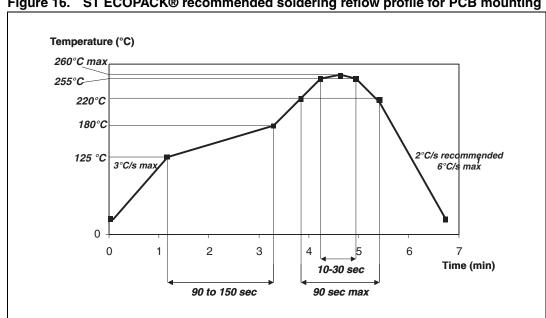

Figure 16. ST ECOPACK® recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement.
