### 3 Assembly recommendations

#### 3.1 Recommended footprint

Figure 26. Recommended footprint in mm

Note: Solder mask defined (SMD) recommended.

#### 3.2 Stencil opening design

Stencil opening thickness: 75  $\mu\text{m}$  / 3 mils

Figure 27. Stencil opening recommendations

#### 3.3 Solder paste

1. Halide-free flux, qualification ROL0 according to ANSI/J-STD-004.
2. "No clean" solder paste recommended.
3. Tack force high enough to resist component displacement during PCB movement.
4. Particles size 20-38  $\mu\text{m}$  per IPCJ STD-005.

### 3.4 Placement

1. It is recommended to use leads recognition instead of package outline for accurate placement on footprint with adequate resolution tool.
2. Tolerance of  $\pm 50 \mu\text{m}$  (25% offset allowed on the smallest dimension of the smallest pad) is recommended.
3. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
4. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

### 3.5 PCB design preference

1. Any via around or inside the footprint area must be closed to avoid solderpaste migration in the via.
2. Position and dimensions of the tracks should be well balanced. A symmetrical layout is recommended to prevent assembly troubles.

### 3.6 Reflow profile

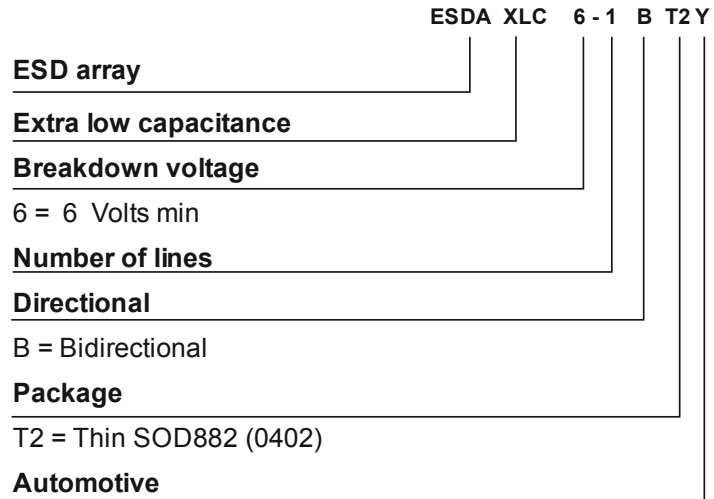

**Figure 28. ST ECOPACK recommended soldering reflow profile for PCB mounting**

**Note:** Minimize air convection currents in the reflow oven to avoid component movement.  $O_2$  rate inside the oven must be below 500 ppm. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
